LITTLE JIM.

(With apologies to E. Farmer.)

The bike it was a patched one, The outside old and mean, And everything within that bike, Was wondrous far from clean.

Tie frame it was distorted. By many a hapless spill, The compression of the engine Was comparatively nil.

Jim, unsuspecting, bought it From a "private owner" man
Who knew full well it was a "dud," But didn't care a d-

He glibly lied to Jim about It being "very hot," But when poor Jim had bought it, He discovered 'twas a "crock'

Protests were unavailing, For the man was not averse To exposure of his treachery To the whole Universe.

And Jim at once decided, That another bike he must Immediately purchase From a firm that he could trust.

So he hied him to the "Eastern" Where his friends were all agreed, Second-hand machines embodied Both trustworthiness and speed.

He selected one that suited him From every point of view, And though this was 'before the war," It's still as good as new.

Paris-Nice Impressions.

ARKED deterioration of French roads, coupled with the comparatively high average speed of 1831 m.p.h., accounts for the fact that only forty-five competitors of sixty-nine starters survived the Four Days Trial from Paris to Nice. British Six Days Trials competitors agree in the opinion that the Paris-Nice event was-this year, at any rate-more severe than any six days event organised so far in Great Britain, which opinion will please the A.C.U., and interest "Six Days" competitors. It may be argued that 750 miles in four days is surely no searching test for a modern motor cycle, but the fact remains that long stretches of notoriously potholey roads-the Rhône Valley in particularcomparable with nothing we know in the British Isles (the pavé, the dangerous railway and tramway setts), accounted for many troubles, and a large percentage of those machines which survived the ordeal bore unmistakable traces of the severe strain that they had received. organisation was good on the whole, and the scenery magnificent; but to enjoy it to the full would entail shorter daily distances and a slower speed than the 30 m.p.h. necessary to average the requisite 1834 m.p.h., for the competitors' attention had almost invariably to be centred upon the road ahead.

Road Surfaces.

Here it may be remarked that the solo rider is at a distinct advantage in being able to pick his track, in daylight at any rate, but early morning starts with lamps alight ensured that every cassis or caniveau or unexpected pitfall was not avoided. Of course, several of the magnificent stretches of road for which France was at one time famous gave the riders a welcome respite and an opportunity for speeding of which they were not slow to take full advantage. All these conditions went to complete the variety for which the Paris-Nice Trial of 1920 will be

remembered. Petrol is not quite so scarce in France as we had been led to believe, but in country districts it is not always obtainable, due to difficulties in distribution, so that a reserve supply should always be carried by tourists,

British Successes.

British motor cycles stand out prominently in the results published in full in another part of this issue, solo riders heading the list. Much remains to be done in the matter of improved sidecar chassis design, and less frequent troubles should be encountered with loose or broken mudguards. Engine trouble was rare, frame fractures on motor bicycles and sidecars being the most serious defects encountered on the trip across France. This result is not so surprising to those who saw and "felt" the roads; moreover, the official cars were also frequently in trouble. But, lest tourists should be dissuaded by these impressions from touring France this year, we would explain that the best surfaced roads were not chosen for obvious reasons. The clear fact remains, however, that French roads have markedly deteriorated during the war, probably to a greater extent than is the case at home.

From what we saw of the conditions of the country we were convinced that the future of the motor cycle movement in France would be severely handicapped by the state of the roads, as until enormous improvements have been carried out the motor cycle as a pleasure mount can never come into its own. Therefore, we would strongly advise French motor cyclists, and all those interested in the industry, to make strong recommendations to their Government as to road improvements, and we feel certain that such a go-ahead country will not fail to recognise the importance of fostering a new and evergrowing industry.

If public enthusiasm throughout the trial is any criterion, the motor cycle movement in France has at least popular approbation to help it forward.

Two-strokes on Brooklands.

EFORE the war two-strokes were practically unknown at Brooklands unknown at Brooklands, presumably because they tended to get so hot in sustained high speed. work that they either pre-ignited or seized. We occasionally got a very stunt performance from some such engine at a hill-climb, in which case-unless it was a Scott-it usually arrived at the venue on a car. Things began to look up in 1914, when a Levis finished thirteenth in the Junior T.T. at nearly 40 m.p.h. average. To-day there are signs that the two-stroke may have to be reckoned with on the track before it is much older. Two-strokes arrive by road at important hillclimbs, and sweep the board up to their capacity limit. I hear of hot-stuff two-stroke engines under manufacture, as opposed to the older type which was deliberately detuned by its designer to prevent its seizing. How soon will the Junior T.T. and the Brooklands smaller class records fall to a valveless engine or, perhaps I should be careful to say, to a " two-stroke " engine?

Driving Two Motor Bicycles at Once.

OFTEN used to see male cyclists riding one machine and leading another—usually of the open frame type—by its handle-bars. The next time I attend a motor cycling gymkhana I shall offer a special prize to any rider who can perform this feat with two motor bicycles. Moreover, I would pay the winner a handsome retainer to teach me the art. The name of my post town is not that of my railway station. Needless to say, I emblazon the name of my station on my private stationery in red letters 2in. high, but this precaution is too mild for the demobilised Whitehall flappers who now staff most of our commercial offices, so that parcels are always arriving at the station near my post town, which is some ten miles away. As usual, my new motor bicycle was sent to the wrong station. I blush in these days of famine to confess that another machine was already champing its bit in my stable. I thought of riding the one machine to the station, and leading the new one home by its handlebar, but prudence prevailed. I borrowed a comrade's car, and enlisted his services to solve this fox, goose, corn, and river problem.

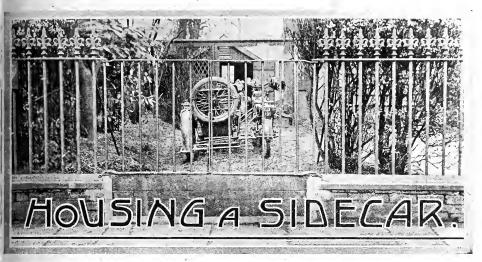

Standardised Controls?

THE price of his hire was that he should have "first biff" on the new jigger (as events turned out, it was some "biff," too). We collected the new machine, and he set off at about fifty, with myself following sedately and enviously in his slow little car. He soon vanished, and I sought comfort by calling at a house along the route to enquire if a beauteous inmate felt like a joyride. She didn't. I emerged crestfallen, and laboured for the next halfhour to start the engine of the aforesaid car. Its

last suck before I switched it off had drawn about ty mattressfuls of fluff into all the jets of its infernal complicated carburetter, and it proved a weary je to cleanse them. Halfway up the last hill along the road, I met my comrade returning on my new jigg in search of me. I waved a hand, and shot u Twenty minutes later I was on the verge of setting out in search of him, when he tottered in bleedin My lovely new jigger had its footrests pointing seven and one o'clock. Its foot-brake was non e. Its front mudguard looked as if it had been trying push a kicking horse. Its valve lifter lever was the ramshorn type. Its front forks were, apparent trying to make a détour round their own crown. Wh I was getting short of breath, he ruefully explain that the throttle worked in an opposite direction that on his own machine, and he had given full gas on a hairpin. As I said before, I will pay very handsome retainer to anybody who will teach n how to ride one 8 h.p. o.h.v. Zenith, whilst leading another by its handle-bar. Alternatively, I will prese a putty medal to anybody who will persuade the trato standardise their carburetter controls.

Tyre Adhesion.

NOTICE that many modern engines dispose more power than the tyres can transmit to tl road. I am at present riding a 4 h.p. machin which climbs 1 in 5 at about 35 m.p.h. on a gear There is not sufficient weight on the bar wheel for the tyre to get a grip on the road surfac When the tyre can grip, the back wheel does upwar In actu of 400 r.p.m. under the conditions cited. practice, such hills are generally very smooth as hard, very greasy, or very rough and stony. Und such circumstances wheel slip occurs, and the pa drops proportionately; the wheel alternately bites, as the machine accelerates; or the wheel spins, and the machine slows. It is for this reason that back tyr are recording rather short lives, especially on passeng outfits. Such bite-and-slip treatment is excessive destructive of indiarubber, and many trials ride practically did in a new cover during a one-day tr last summer. I do not know that there is any possil remedy. We can hardly carry extra weight, or sh the centre of weight further back. But riders w desire to be economical will not attempt to "stun on hills, and should be content to climb slowly a surely. Does anybody know whether the 3in, tyl fitted to many modern heavyweights give super adhesion? The average rubber-studded 21/2in. cov only bites at intervals if a bad hill is rushed. Ste studded covers are worse from every standpoint. The spin readily on hard surfaced climbs, and on soft stony hairpins they bite too hard when they have eat through the "carpet," and cause the machine to g an almost uncontrollable plunge.

To the motor cyclist of small means who lives in a house built before architects realised that a garage is almost as necessary as a pantry, the question of accommodating his machine is a problem presenting considerable difficulty. He is usually forced to decide between the local garage or the trouble of attaching and detaching the sidecar every time the machine is used. Should the sidecar owner have a house with a reasonable side entrance, he is indeed fortunate, for he may build his own garage. True, it entails a little trouble and initial expense, but, in the end, it saves a good deal of worry and after-expense. In June of last

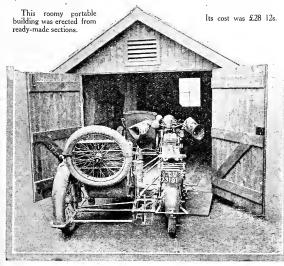

year, my father's family decided to buy a house, and the choice lay between small suburban villa and an oldfashioned semi-detached house; in the heart of London. The latter had ground at the side of it measuring' 14ft. frontage. My brother and myself (both owners of sidecars and also sufferers at the hands of the local public garage) were called into consultation, and, seeing the possibilities of the 14ft. spare land, voted for it, and it was decided to utilise the side ground for the much " longed-for

garage.

There were quite a number of difficulties to overcome, also we had to decide whether it would be cheaper to build of wood in our spare time, have it built of brick, or purchase a ready-made portable structure from one of the many makers of such buildings. Catalogues revealed the fact that prices ranged from about £21 up to £40 odd, so one had a good range of selection. After much thought we eventually obtained one from Messrs. Hobsons, of Bedford, for £28 12s., and very good value it is; if made at home in one's spare time the wood alone would probably cost that sum. To allow of access to the building,

an entrance had to made - firstly be through the iron railings leading from the roadway. work had to be put into the hands of a smith. The photographs show how the alterations were effected. Part of the iron railing has been removed and iron gates substituted, the wood portion at the bottom being used as a ramp for the kerb; the cost was £8 10s., allowing \pounds^2 for paint and sundries. The total cost was £39 2s., which, at first sight, may seem large until one considers the weekly cost garaging two side-

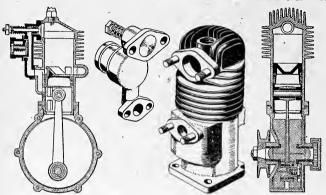

cars.

D.O.

An American Two-stroke Design.

Several Novel Features on the New 238 c.c. "Yankee" Motor Cycle.

Constructional details of the Yankee two-stroke engine. There are two automatic valves in the detachable transfer passage, and the larger of these controls the induction of gas from the carburghter.

ALTHOUGH America was the home of the two-stroke boat motor, bicycle power units working on the same principle have not, been nearly so popular there as in this country.

popular there as in this country.

The two-stroke lightweight is indeed particularly our own, only two examples having hitherto appeared in America, and both of these have been largely based on British design. A new machine, however, is now being manufactured in Chicago, which embodies several features not usually found in conventional two-stroke practice.

Known as the Yankee, this new model is being made by the Illinois Motor Co., and its price in Chicago is \$180 (£35). for a fixed gear model with helt drive.

for a fixed gear model with belt drive.

Engine dimensions are 2½in. bore by
3in. stroke (63.5×76.2 mm.), and its power

will therefore be in the region of 2½ h.p. Conventional three-port practice is not followed, since the induction pipe enters the transfer passage and is closed by an automatic valve, while there are two rows of ports in the piston, in addition to the transfer and exhaust ports in the cylinder walls.

The Action of the Engine.

A separate casting forms the transfer passage, and this is bolted on to the cylinder, while an atmospheric inlet valve and cage is screwed into the former casting. The carburetter is attached directly to the inlet valve cage. When the piston rises, the ports in its skirt uncover the openings of the transfer passage, and the depression in the crank case causes the valve to lift off its seating, and allows

gas to pass through the carbur Meanwhile the charge in the cylind compressed, and the piston descende the exhaust ports are uncovered, in its lowermost position the top ro ports in the piston uncover the opp of the transfer passage, and the gethe crank case passes into the cylinder that the top of the transfer passage smaller automatic valve giving entitle combustion chamber, and a ceportion of the gas forces its way this into the region of the sparking By controlling this valve from the habar, a decompressor action is obtafor starting purposes.

The exhaust ports are at the rear, a bolted-on manifold carries the gas the silencer.

Mechanical Details.

-Internal flywheels are used, these turned from steel castings having crank bosses integral. The latter hardened and ground steel sleeves pron to form the main and crank journals, which run in bronze bushe Gear drive is employed for the mag and the train of three wheels is end

in a pressed steel case.

Lubrication is on the petroil sys
Ducts are drilled in the flywheel cas
to convey oil to each bearing.

Frame Construction.

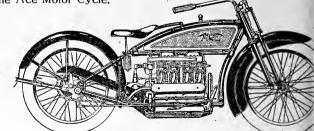

Usual American practice is followe the general design of the frame, be departure is made in the steering he which has plain steel (hardened) beawashers, instead of ball races.

The wheels are 25 x 24, and a cobrake, in conjunction with peda gear, is incorporated in the rear hul. A pressed steel tank is fitted, hol slightly over one gallon of petr mixture, and on this quantity of fu is claimed that 140 miles have attained

A New American Four-cylinder Machine.

Advance Particulars of the Ace Motor Cycle,

ANNOUNCEMENT of a new American motor cycle, to be known as the Ace, is made. The machine will resemble the existing American four-cylinder job in many respects. The frame is of the duplex type, with special-rein-forcing bar at rear end, between the upper and lower forks. This, gives added rigidity for sidecar work. Forks are of the "pusher" type, with straight lines, not unlike the forks on 1914 Hendersons. Having a bore of 68 and 82 mm. stroke, the engine has a displacement of 1,192 c.c., and is said to develop 20 h.p. All valves are 1½m. in diameter, the inlets being overhead, with fully enclosed mechanism. The crankshaft is larger, bearings are more ample, and gudgeon pins are thicker than the usual four-cylinder practice. The bottom of the crank case is removable, permitting of the tightening of the bearings without removing the engine from the

An American newly-designed four-cylinder motor cycle-the Ace.

frame. Oil is carried in a sump in the lower part of the crank case, no oil tank being fitted.

A Berling magneto is used, and separate generator will be attached for an electric model; 27in. × 3½in. tyre fitted, giving a low saddle position. Ace will be furnished in blue, proout with gold stripes, with coloured rims.

French Machine on Car Lines.

The Spring Frame 7 h.p. Lutece with Shaft Drive.

IN reconstructing the French motor cycle industry, the manufacturers of that country appear to have abandoned most of their pre-war designs, and, as revealed at the last Paris Show, a large number of entirely new types have appeared. Many of these show a tendency to impore conventional practice. tendency to ignore conventional practice and to follow more advanced lines, by the use of pressed steel frames, shart drive, vertical twin engines, etc.

The rear suspension of the 7 h.p. Lutèce,

The 7 h.p. Lutèce is one of these new lesigns, having both wheels sprung and composite frame combining pressed teel and tubular construction. The

A French design embodying several modern and unconventional ideas.

engine is a vertical twin having cranks at 360° (on the same centre), and is mounted with its crankshaft and cylinders lengthways in the frame. The hore and stroke are 84 and 90 mm. respectively (998 c.c.), lubrication is by forced feed, an oil pump being driven from one end of the camshaft and delivering oil to the main and big end bearings through oil passages made in the crankshaft and connecting rods.

A Unique Specification.

Next in order to the engine comes the multiple disc clutch and the three-speed gear, which are contained in an oil bath casing. A compressed air starter is em-bodied with the gear box, the former serving also as a tyre inflator. Behind the gear box is the propeller-shaft which drives the rear wheel by worm and worm wheel. A lighting dynamo is fitted be-

tween the engine and the gear box, and ignition is by high-tension magneto. Quick detachable disc wheels are provided with drums for external expanding hrakes; two of these are in the rear and one in the front drum, one front and one rear brake being interconnected and controlled by a lever on the handle-bar. This lever can be locked with the brakes in the "on" position. The second rear brake is operated by pedal.

It is claimed for this machine that it

will attain a speed on the level of about fifty-five miles an hour, and its weight is

said to be 3½ cwt.

Only a very few examples of the Lutèce gear-driven motor cycles have been produced, so that it is impossible to speak of their behaviour on the road until an opportunity has been afforded of judging their performance in some of the important road events.

An Open Frame "Sidecar" Outfit.

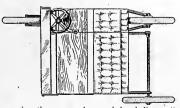

A Three-wheeler with Large Seating Capacity.

N. W. H. PLUMMER, who is responsible for the motor cycle and sidecar of unconventional deign illustrated, has aimed at improved nd simplified construction, increased eating capacity, together with greater omfort, cleanliness, and protection from he weather.

he weather.

In this invention, the motor cycle omprises, in combination, a single ongitudinal frame member, located omparatively low down at its centre, and provided with, or connected to, uprardly projecting members at the forward end, which support the steering column and road wheel. Further uprardly projecting members are proposed to the steering column and road wheel. ordinal and road wheel. Further up-rardly projecting members are pro-ided at the rear end; these carry the riving wheel, and also form a support or the seat. The longitudinal frame sember may be provided with floor-oards, while the forward column may arry a windscreen. If desired, that ortion of the rear frame which carries as seat may be bigged as that the seat ne seat may be hinged, so that the seat ay be swing over to allow of easy coses to the driving wheel. Suitable rovision is made for the attachment of ne engine, gear box, tanks, etc. For

A unique design for a threewheeled runabout, the driver of which is fully protected.

example, these may be carried wholly by the longitudinal member, or partly by this member and partly by the rear column. The driving road wheel and sidecar may be spring supported in any

convenient manner.

The motor cycle may be used separately, or be fitted to the sidecar attach-

ment, which may be of corresponding construction, but having no steering column. Its design is such that the sidecar can be readily attached to the motor cycle in such a manner that the seats, floor-boards, and windscreen meet, and to all intents and purposes form a single unit. It is claimed that the combination described is especially suitable for a motor cycle taxi, since there is ample seating accommodation and space for luggage. If desired, a suitable hood may be

attached completely to enclose the driver and passengers, thus rendering the ontfit absolutely weather-proof. For motor cyclists who ride in all weathers, the machine described would be ideal.

We understand that Mr. Plummer would consider offers from manufacturers for the right of producing under licence.

A Commentary based upon Practical Experience and a Study of Overseas Opinions.

Exports WHILE the position regarding delivery of new machines so far as the "home" Improving. buyer is concerned is very little better this year than was the case last spring, there are signs that there will be considerably more machines sent. Overseas during 1920 Last year, manufacturers appeared to regard export trade as "impossible" owing to shipping difficulties, and were tempted to take the line of least resistance by succumbing to the persuasions of home buyers, who literally besieged On the one hand they were confronted with the usual difficulties of export trade, greatly increased owing to uncompleted selling arrangements, the ever fluctuating prices, the shortage of labour and space for the packing departments, and, finally, the difficulties attending the purchase of suitable wood for packing cases. Perhaps, in some cases where goods were shipped direct to Overseas buyers and not through British shippers, the question of credit, too, may have had an influence. On the other hand, British buyers were willing to call at the works, take delivery of machines fresh from the testers' hands, and pay cash with a consequent saving in detail work.

This year, however, most manufacturers have been able to restore their packing shops, which often during the war were used for other purposes; skilled packers have been reinstated, suitable material for packing procured, and office staffs reorganised and made up to strength. But even now there are many difficulties with which manufacturers have to contend. The moulders' strike seriously retarded output, and this has increased the demand upon the output for the rest of this financial year. Further, shipping facilities are still limited, and we have seen packed motor cycles,

which have stood there many weeks on this account awaiting shipment in the works of several makers. In the case of smaller manufacturers, such consignments represent a great deal of money, and it is fa from satisfactory for it to be lying idle at a time when agents are visiting the works daily hurrying up deliveries.

in in in

British Industries Fair. THERE seems to be an impression abroathat British manufacturers at the presertime are almost apathetic where Overseatrade is concerned. This is not the case

as witness the fact that about seventy manufactures are exhibiting at the Birmingham section of the Britis Industries Fair. These exhibitions are exclusive for Overseas buyers, being held under the auspice of the Chamber of Commerce, and the general publicate not admitted. The fact that so many manufactures are exhibiting is proof that the industry is serious interested in export trade, and that, once condition are easier, there will be little cause for complair from Overseas buyers on this score.

Owing to the national necessity to export as much as possible, manufacturers are displaying patriotist by drawing attention to this. We have a letter beform us which was sent by the makers of the British Excelsion to their home agents, pointing out that the supplie of materials at present are insufficient to meet a demands and asking for patience in delayed deliveries in order to enable the makers to send more good abroad. Other makers are making similar appeals those who have placed contracts with them, and not doubt this will account for an increased market of British machines abroad in the ensuring year.

THE CAPITAL OF CAPE COLONY.

Capetown seen from the picturesque motor road above the city.

A Selection of Letters from Readers scattered all over the World.

Magneto Drive.

MR. W. G. QUINTON, A.M.I.C.E., an executive engineer in the Punjab, India, criticises magnete drive of the conven-

tional machine intended for Overseas use.

"Why do British manufacturers favour the chain drive to magneto?" he asks. "Why, also, do they put the magneto to far forward or rearward of the engine? The latter practice only makes the chain drive worse, in my opinion, han it would be if the magneto were much neaver-fore

r aft. "Personally, I, as an Englishman, would prefer to buy ny motor cycle from the Home country, but when we see and know the better American machines what happens?

"I brought out a 6 h.p. A.J.S. and sidecar in 1915. I had endless trouble with my magneto drive and cork clutch. I mve also had similar magneto drive trouble with a 6 h.p. Nyno. "In spite of a Dixic magneto and its alleged leakage of

nagnetism. ria the gears of its drive, I never had any nagneto drive trouble in 6,000 miles of running on an

American machine.

"I think it is a fact that the Dixie driving pinions de secome magnetised, but it does not seem to do any harm or

veaken the magneto.

"However, this is a minor-point compared to the absolute reedom from breakdown that the magneto gear drive gives. "Similarly with the Powerplus clutch. No harm seems to e done if absolutely no oil is given to the roller bearings. While, with a cork clutch in the bot weather, in negotiating numpy ground or sand one slips one's clutch and spontaneusly starts a very odoriferous bonnre and the gent of Twist controls, too, and the absence of twiddly bits on he handle-bars, and 28in. wheels are points which recom-aend the American product."

The latest A.J.S. has the magneto in the front position.

Most Colonial models of British manufacture have 28×3in.

quickly detachable and interchangeable wheels.-ED. A Letter from Canada.

Mr. E. A. BERTINET, of Montreal, sends a long letter on arious subjects of interest both to maker, and rider in this ountry. He says:

"During the war I wrote to a dozen representative English rms asking for their catalogues. All answered fairly

"Now, please note. American firms supply you people ith sidecars on the left side, for your rule of the road. Not ne of the English firms mentioned whether they would, or ould, supply a sidecar to go on the right of the machine in our rule of the road! Look in your Overseas Suppleents. English firms appear to be represented in every plony except the oldest and nearest (Canada). Are they Are they fraid of U.S. competition?

"I have been waiting for some spares for three weeks om an American firm that advertises it fills orders within wenty-four hours of receipt. I waited two months last year or a kick-starter from the makers. I will admit this would ot happen if I rode an Indian or Harley-Davidson, as those

rms have two fine agents who are well stocked with parts.
"Please 'let up,' so far as Canada is concerned, on this lk of 'Overseas conditions.' You discourage the fine type i man (who is usually a motor cyclist) from emigrating. ur reads are of two types—very good or impassable. From ere to New York, approximately 400 miles, is splendid road I the way, as good as city asphalt, and dustless. ore good roads in Quebec than any other province, and the motor fees go on the roads. We pay, appreximately, be per horse-power and 2s. for the plate, plus £1 for driver's occuce. With me this amounts to \$12.85 yearly (£2 12s.), his is the highest fee in North America, New York State

bing, I believe, only \$5 (£1.)

"I have tried to see my way to buying an English machine cycle car, such as the Morgan or Premier, but at the lees over in England I regret my patriotism does not hear a call. There is a 20% or 221% duty on machines coming re, and I can get a beautiful silent Henderson delivered the electric lights for £125. I can also get half a dozen od makes of five-passenger cars for about £280, so I sitate and think twice before I send to England to buy pything that I cannot even see, and with which I have all the trouble of passing through the Customs. I can get a 21 h.p. two-stroke single for \$295 (£59) after it has paid a 575% duty. This is the Cleveland lightweight—an excellent

"At present I have a 1917 Reading Standard with electric lights. I have been down to New York each year with sidecar attached, and will endeavour to give a truthful history of the weaknesses of this machine. It may be history of the weaknesses of this machine. interesting to English readers to learn that the American Bosch Co, were behind the Reading Standard people, and when the United States alien custodian took over the Bosch works as enemy property it necessitated a reorganisation of the motor cycle firm. Mechanics have remarked to me that the Bosch people saw that the excellent workmanship that went into their magnetos also went into the Reading Standard.

Some Details.

"I have made 47 m.p.h. on the level for as long as thirty minutes with passenger and luggage. How fast it will go my nerve will not hold out long enough to find out—I have gone fifty-two for a few minutes. These are its faults: The crank case leaks oil despite all efforts to prevent it; the The crank case leaks oil despite all efforts to prevent it; the pump leaks oil, and the crank case breather, which throws on to the chains, does its work so well that the back wheel (and my left trouser leg) is black with oil. It uses up about a quarter every 500 miles. It starts on the second or third kick without having to be primed. I have yet to or third sick without having to be primed. I have yet to find the hill it will not go up. In the country I take all on 'high' with passenger and luggage. Our speed limit is 18 m.p.h. in towns and villages, and 25 m.p.h. in the country. New York State limit is 30 m.p.h. in the country. "After 3,000 miles, I took the R.S. down, and found a

negligible quantity of carbon and some wear on the rocker, otherwise everything was O.K. Bushings showed no sign of wear at all. I have forgotten I have a magneto en the machine; it has never failed me, even in winter at ten degrees below zero. Yes, I have ridden at that tem-perature. I throw some boiling water over the Schebler, give it one kick, and I am off. I keep a Thermos bottle in the sidecar, containing hot water for restarting when away

from home. My back wheel wears a chain.

Too Heavy!

"I have had trouble with the nuts on the machine loosening up, but now I rust them before using, and then put them on with shellac or rubber cement, and they stick. I have broken innumerable ball bearing retainers in the front hub, due, no doubt, to the pull of the sidecar. The latter is a Rogers, steel frame and body, and wooden floor, and equipped with a top. I have broken both C springs and frame, so, except for the body and wheel, the sidecar is new !!! It is attached to the machine by three ball and is new !!! It is attached to the machine by order had and socket joints. It takes about three minutes to disconnect it, and six to attach it. I never worry whether it is in line, but the tyres show even wear. I have had about six punctures in three seasons, and use butt-ended tubes exclusively. In fact, I class the tyres with the magneto, and forget about them. After reading this you will wonder why, in starting, I said I would like an English machine. Well, I will tell you. I am 51t. 6in. in height, and weigh about 150 lb. This machine weighs about three hundredweight, and when it falls down, I feel like calling somebody to help me pick it up. It is too heavy, and whatever trouble I have had, I am convinced, is due to the enormous weight.

"If you see any British manufacturer 'cocking' his this way, tell him Canada will buy his machines if he will meet the American price, which be should be able to do owing to the preferential duty, but that we must have grip controls, 28 x 3in. tyres, sidecars to go on the right side of the machine, and kick starters, preferably on the left side. Appoint an agent here or at Toronto, supply him with a stock of spare parts valued about £1,000, and you

can have our dollars.

By the way, I noticed a kick from someone that the tanks should be made to hold two and a quarter gallons, so as to take two gallons, as you sell your petrol that way. "Here the village pump is the 'gasolene' pump, and in

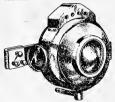

the settled parts these are numerous. These pumps will supply any quantity. Oil can be got also in this way, but I prefer to get a sealed can of Mobiloil B. We are paying 37 cents per gallon for petrol, and \$1.25 for oil in tins.

A Tobacco Box that Became a Rear Lamp.

The Romance of a Lamp, of which Many Thousands are in Use.

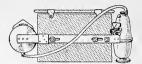

F OR several years the Motex rear lamp has been on the market, and before the war was often quoted as an example of the quality of German-made goods compared with British propositions at the same price. Probably hundreds of accessory dealers know the lamp as a German production—and riders, too, who have been under this impression, have consoled themselves with the knowledge that, whatever its origin, it is a good

It may come as a surprise to many of the thousands who use the lamp to learn it is not, and never has been, a German production. It is, as it always has been, the leading speciality of Buckingham Street, Birmingham. How it came to be made illustrates how necessity is the mother of invention.

The Motex rear lamp.

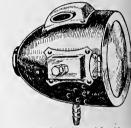

When the lighting regulations called for rear lamps for motor cycles, Mr. Towel, the proprietor of the concern, could not obtain a rear lamp for his machine. At that time he was manufac-

The lamp and generator attached to the number plate.

turing metal tobacco boxes, such as are sold in their thousands at seaside resorts. This tobacco box formed the nucleus of Mr. Towel's first rear light. A ruby glass inserted in the lid, a simple "chimney," and a Bray burner quickly converted it into a strong and good looking lamp. Seeing the commercial possibilities of the lamp, Mr. Towel approached several large factoring houses, who, while being attracted by the price, would only give orders for single thousands. A German in England, however, gave orders for thousand gross lots, and the name Montie was given to it for these orders. Hence its reputation as a German lamp. Now, however, Messrs. Stanley and Hill, Ltd., are manufacturing under their

own name, and in future the lamp be known as the Motex, and sold generator and a bracket for connect the two to the rear number plate a very moderate figure. A sidecar lish has now been added to the Motex ra and later on, perhaps, a head light follow. In the meantime, the firm is centrating upon motor cycle lamp specties, which are manufactured through in its own works. Incidentally, manufacture of even a small lamp generator requires quite a large plate for the moderate of the mining generator alone. Messrs. Stanley-Hill make all parts themselves.

The Motex lamp, designed for sidecars

TO FACILITATE TIMING.

WHEN retiming their engines, amateur mechanics—and for that matter garage mechanics also—frequently experience the need for some instrument accurately to show the top of the piston stroke and positions near to it. Usually a rod is used in the cylinder, and when it is desired to time the engine, say two millimetres before the top of the stroke, the crank is moved until the rod falls that amount. By this method it is im-

that amount. By possible to obtain accuracy, as it depends so much upon the eye in watching the rod, but with the device illustrated such rough and ready methods are obviated. It is the design of Mr. E. Mitchell. of 35, Oatsfield Road. Liverpool. who has protected it.

Referring to the illustration, the body is screwed into the compression tap orifice with the fingers. The indicator rod is a good sliding for in this body, and when the pixtor raises it to the

The N it:hell timing device. (A) Body to screw into cylinder head. (B) Extension piece for valve timing. (C) Measuring rod.

piston's top position, the position is noted on the rod and the crank revolved again until the piston is further down the cylinders. The rod is then adjusted to give whatever advance is required, the rod being marked in millimetres. When the piston is again brought up to touch the rod, the exact required position is assured.

An extension to the rod is necessary if the timing of the valves is being checked, the rod being in two pieces, owing to the restricted space between the tank and cylinder heads of most machines.

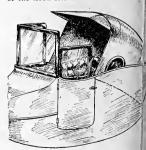

A CABRIOLET SIDECAR DESIGN.

SIDECAR passengers are almost unanimous that the majority of sidecars are designed from the saddle of the machine and not from the passenger's point of view. They complain of grit thrown from the front wheel, and when a screen is fitted point out that there is a draught which appears to be thrown upon their faces by the body of the driver. When hoods are fitted, then the complaint is transferred to the draught which passes through between the top of the screen and the hood extension.

The motor cyclist who provides his passenger with a coupé sidecar probably will be told that fresh air is required. Mr. B. H. A. Chalk, of I, Kendal House Road, Isleworth, probably heard these complaints before the war put a step to his motor cycling, and apparently for the past twelve months he has

been working out a solution to problem, for the date of application his patent bood was November, 1918

his patent hood was November, 1916. The main part of the hood is a 1 structure of metal, wood, or fal which is pivoted at its forward end that when not required it may be sy down into the body at the sides and hind the seat. The door is constructed accommodate a sliding window, a also the opposite side of the body the three short of the construction of the interest of the interes

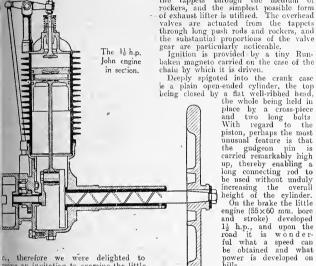

A sidecar hood that folds out of sight w

THE JOHN SCOOTER ENGINE.

A Tiny Power Unit of Exceptional Efficiency.

UITE a new department of the motor cycle trade has surpra unit cycle trade has sprung up in recent times. The introduction of the oter and various cycle attachments as necessitated the careful study of ininture engines, magnetos, carburetters,

ceive an invitation to examine the little gine built by Messrs. T. G. John, Ltd., Holyhead Road, Coventry, during rious stages of construction.

The engine is designed on up to date ies, and is a sound manufacturing oposition.

The first feature to strike an observer the enormous length (5½in.) of the main inkshaft bearing. The reason for this usual feature is that the engine is tended to be fixed on, one side of the oter wheel, with the crankshaft passing rough the hub, the flywheel being ounted on the further side. Oil is conveyed down this long bearing by a spiral groove, and the crankshaft is of the overhung type. A spigot on the end of the crank pin drives a light crank, the purpose of which is solely to operate the timing gear. Large inlet and exhaust cams mounted on separate shafts operate the tappets through the medium of rockers, and the simplest possible form of exhaust lifter is utilised. The overhead of exhaust litter is utilised. The overhead valves are actuated from the tappets through long push rods and rockers, and the substantial proportions of the valve gear are particularly noticeable.

Ignition is provided by a tiny Run-

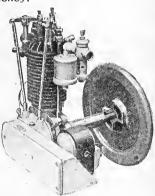

place by a cross-piece and two long bolts With regard to the piston, perhaps the most unusual feature is that the gudgeon pin is carried remarkably high up, thereby enabling a long connecting rod to be used without unduly increasing the overall height of the cylinder. On the brake the little

On the brake the little engine (55×60 mm, bore and stroke) developed 1½ h.p., and upon the road it is wonderful what a speed can be obtained and what power is developed on bills hills.

A very simple and neat little automatic car-

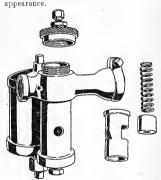

buretter is supplied with
the engine, and the
complete unit with flywheel, magneto, carburetter and control weighs barely

The long main bearing previously referred to does not preclude the use of the engine in scooters in which the flywheel shaft is not required to pass through the hub of the wheel, nor of miniature motor cycles of the more or less conventional type. It is possible to

HOW TO ENSURE A CLEAN ENGINE.

LL motor cyclists will agree that an I oily engine is a bother to clean, and detracts very considerably from
e pride of ownership. At the same
ne, not a few otherwise excellent
gines are sinners in this respect.

We are this resident of the price of the price

Realising this point, Mr. R. Wood, of , Westbrook Road, Thornton Heath, irrey, has gone to some trouble in preparing an efficient substitute for the usual paper washer. For some time past we have had some of these speciallyprepared washers in use between the cylinders and crank case of a small twin which was inclined to be messy at this spot. The results have been excellent, and we can confidently recommend their use. Motor cyclists who are overhauling

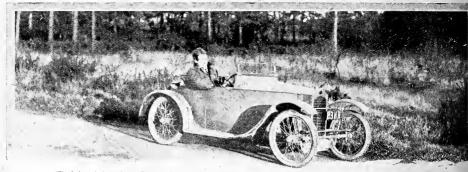

their mounts preparatory to spring runs should bear in mind that the prepared sheets are made in different thicknesses so as to be suitable for cylinder washers or timing gear covers, etc. The material is easily cut, either with scissors or in the usual manner by tapping round the edge of the cylinder mouth, so no difficulty is presented in fitting.

MOTOR (YCLE SPRING NUMBER AND BUYERS' GUIDE.

MARCH 25th has been fixed as the date of the Annual Spring Number of The Motor Cycle. Special articles are in course of preparation, and a feature of the issue will be an illustrated Buyers' Guide.

A SIMPLE MINIATURE FOUR-WHEELER.

The Bleriot Whippet Cycle Car now on a Productive Basis.

The belt and chain-driven Blenot Whippet. This little four-wheeler is fitted with a Blackburne air-cooled engine.

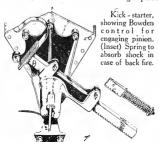

A SERIOUS effort to capture the market at present held by the de luxe sidecar outfit is being made by the Air Navigation and Engineering Co., Ltd., Addlestone, Surrey, who will shortly be producing in quantities the ingenious little cycle car (designed by Messrs. Jones and Marchart) which was described in The Motor Oycle of March 13th, 1919. Since that date the vehicle has been improved in several details, and on the occasion of our visit to the works numerous chassis were seen in a partially completed state. As soon as the effect of the recent moulders' strike allows a more rapid delivery of engines, numbers of these cycle cars will be in the hands of the public.

Some Innovations.

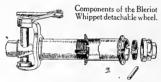

As regards improvements, one of the most important of these is the fitting of interchangeable and detachable wheels. Changing a wheel on the Blériot-Whippet merely means removing a spring steel locking ring in the hub cap, undoing the hub cap and pulling out a special key.

A further improvement is the ingenious

A further improvement is the ingenious form of steering fitted, a long nut being attached just below the steering wheel, engaging with a square thread on the inner tube, sliding up and down inside the steering column. In this tube, near its base, is a slot in which an angle piece

at the end of the short steering arm is fitted. The reciprocating movement of the tube gives to the arm sufficient movement to control the front wheels. The angle piece of this arm comes up against two hardened steel blocks, behind which are two shock-absorbing rubber buffers so that positive action without shock with absence of wear is obtained.

Yet a further innovation is the pedal starting device attached to the timing gear side of the Blackburne engine, which, incidentally, has been slightly modified, being fitted with Ricardo pistons and roller big end bearings. The starter consists of a rack engaging with a pinion on the main shaft, engagement of the pinion being effected by a Bowden control conveniently situated on the dash. The only objection to this device is that it is fitted with a curved plate surrounding the pedal for the purpose of lifting the rack to its highest point previous to starting the engine, and this curved plate is somewhat apt to damage the driver's boot. It would be a simple matter, however, to line the plate in question with leather or some other suitable material.

Efficient Transmission.

We may remind our readers that the drive is taken from the Blackburne engine by means of chain to the countershaft expanding pulley gear, in which the pulley is expanded by means of inclined planes, the tension of the belt being kept constant throughout, any slack in the chain being taken up by means of an idler pinion. The light, belt runs under ideal conditions, being fully enclosed and entirely protected

from the elements, and by its si running should remove one of the cobjections to cycle cars, i.e., the post the transmission.

Running Impressions.

The chief object of our visit to works was to have some little experion of the running of the vehicle on the rand in the course of the afternoon made a short trip in the neighbourd of Addlestone and Weybridge, which sufficient to give us some idea of behaviour of the little vehicle upower. What impressed us most estally was the extraordinarily good sping—in fact, it is one of the best sping—in the control is simple, gear being changed by means of a 1 situated near the driver's left hand, a to control was to be found in the accust positions. The clutch, which is f with Ferodo, was particularly swee action. The steering would be grumproved by the fitting of a much is steering wheel, and, in our opinion, sthing might be done to render the errather more silent, otherwise the Bk Whippet is a little vehicle of promise, and we do not doubt that it become extremely popular when of to the public in quantities.

A scene at the start of a Colmore Cup Trial, when nearly 250 competed.

THE COLMORE CUP EVENTS BRIEFLY REVIEWED.

THE Colmore Cup Trial, which will be held next Saturday, was first organised in February, 1911, and its success probably had an enormous influence upon motor cycle competitions held by organisations other than the A.C.U., for, prior to that date, the Auto Cycle Union had not granted a permit for an open competition. The decision of the Sutton Coldfield A.C. to hold a winter trial was not arrived at until January, 1911, and, in consequence, the preparations were somewhat hurried. The committee applied to the A.C.U. for a permit, but the week before the trial was to be held, the club was advised that "so far the A.C.U. had not sanctioned an open reliability trial and did not intend to make a beginning at this stage."

Over forty entries had been received, and the Sutton Club was in a quandary, which was overcome by electing every entrant a member of the club, so it will be seen that the first Colmore Cup Trial was a closed event.

Forty-six competitors started from the Gun Barrels Hotel, Birmingham, the course being through Alcester via Rose Hill, Stratford-on-Avon, Sunrising Hill, Warmington Hill to Banbury. The return took in Edge Hill.

The winner of the Colmore Cup was W. D. South (334 Scott), who secured maximum marks. R. W. Duke (3½ Zenith Gradua) and P. J. Evans (3½ two-speed Humber) secured maximum marks and were awarded gold medals. A secret check decided the winner; only nine others made non-stop runs.

The 1912 Event.

In the 1912 event, held on February 17th, the entries numbered 106, which, at that date, constituted a record. Of these 104 started over the same course

as in 1911, but during the intervening twelve months machines had vastly improved, and no fewer than twenty-four secured maximum marks, and a further thirten also made non-stop runs. The winner in this year

was Frank Smith (5-6 Clyno sc.).

The course for the 1913 trial was changed, and was practically identical with that which will be used 200 competitors again made it a record this year. trial, and the severity of the event may be gauged by the fact that only eight qualified for the premier award. Secret checks gave the cup to W. B. Gibb (234 Douglas). Starting from Stonebridge, midway between Coventry and Birmingham, the course included Kenilworth, Warwick, Stratford, up Saintbury Hill, down Willersey, through Broadway, Winchcombe, up Sudeley Hill, through Roel Gate and Andoversford to Cheltenham. The return was via Rising Sun (Gamble's Lane), Winchcombe, a hairpin bend near the latter place, back again to Winchcombe, up Willersey, and via Stratford and Warwick to Stonebridge.

The 1914 Event.

No fewer than 252 machines were entered in the 1914 trial over a similar course to that of 1913, but omitting the hairpin at Winchcombe. 244 started and 125 made non-stop runs. Norman Lea (Lea-Francis) secured the Colmore Cup, H. Newey (Levisette) made the best performance in the lightweight class, E. H. Littledale (Ariel) made the best amateur performance, and H. F. S. Morgan (Morgan) was first in the cycle car class. The James's team won the team prize, and the Coventry team the club prize.

This year the secret check as a means of finding the winner is eliminated, and the awards will be made to those who have secured maximum marks and made the best performance in the acceleration test.

The Conversion of Fixed Gear Motor Cycles.

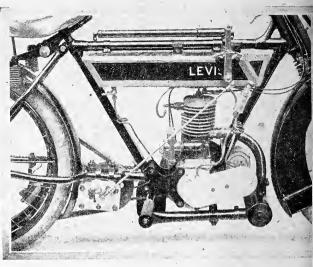

Fitting Change-speed Transmission to Single-speed Machines.

F ROM the large number of letters on this subject, received at the offices of The Motor Cycle, it is clear that few owners of single-geared motor bicycles are content to leave them as sent out by the makers, as the exigencies of traffic and the popularity of the sidecar traffic and the popularity of the sidecar are creating a huge demand for the delivery of gear boxes. Up to the present time our readers have found it extremely difficult to get their singlegared mounts converted, chiefly because not every motor cyclist is capable of doing the work himself; firms which undertake this work have been hard to find, and manufacturers of gear boxes have been mable to accept orders for single units as they have to supply the manufacturers with large quantities.

A Progressive Firm.

The Ray Motor Cycle Co., 49, Brick Street, London, W.I., are making a speciality of fitting Roc two-speed gear boxes to such well-known mounts of boxes to such well-known mounts of modern manufacture as the Levis, O.K., and Diamond, while they also fit these gear boxes to Metro-Tylers and the old pattern 2 h.p. Humber. The company also undertake the conversion of older pattern motor bicycles of $3\frac{1}{2}$ h.p. and over, altering them so as to take the well-known three-speed and kick-starter Burman gear hoves thus rendering these Burman gear boxes, thus rendering these old pattern machines suitable for sidecar

The conversion on the two-stroke models is particularly well carried out. Special clips are supplied to suit the various types of frames, as well as con-trol levers to fit on the lower horizontal

A single-geared Levis fitted with a Roc two-speed gear.

tube of the frame, or, if the machine does not possess one, on to the top tuhe.

A special sprocket is supplied, which can be fitted in place of the pulley on the Levis engine, and can be easily bolted

on the inside of the flywheel. The wh conversion is an extremely simple matt and can be carried out by an intellige mechanic without difficulty in a ye short time.

A Motor Cyclists' Targa Florio.

Proposed Race for Motor Cycles and Cycle Cars on the Famous Sicilian Course.

MANY of our readers are acquainted with the Targa Florio race for cars organised by Commandatore Florio, president of the Automobile Club of Sicily, held on the Circuit de la Madonie, Sicily. Last year's race was won by a Peugeot car after an exciting contest. The course is very hilly, abounds in corners, and is a very complete test of a driver's skill.

This year the race will take place on June 20th, and is confined to stock cars, with slight modifications; but what is of greater importance to motor cyclists is the suggestion that has been made in Paris to the organiser to create a race for motor cycles and cycle cars to be held over the same course a day or two days after the car event.

after the car event.

If sufficient support is forthcoming, the length of the motor cycle race will be three or four laps of the circuit, which measures 108 kilometres (sixty-seven miles), or a total distance of 201 or 268

For the car race a special train will run from Paris to Marseilles, and boat from there to Palermo, calling at Genoa for the Italian competitors. A special service from Paris on the Thursday night, prior to June 20th, will carry spectators to Sicily, depositing them close to the starting and finishing point early on the Sunday morning of the race.

If the motor cycle race materialises, motor cycle competitors will be able to avail themselves of the organisation for transport which is being made for the car race.

A Clashing of Dates.

We imagine that only Continental motor cyclists could compete in this event, for the dates of the T.T. races in the Isle of Man are June 15th and 17th, and it is most unlikely that sufficient com-petitors could be found to support both races. Possibly the organisers have over-looked the dates already fixed for the T.T. races, or are not counting on substantial British support, and are willing to depend on what entries they are likely to receive from French and Italian riders who are also unlikely to ride in our T.T.

By a strange coincidence, both the T.T. and Targa Florio are held on island courses in mountainous country, although we imagine the winding, hilly course in Sicily is more difficult than the climb over Suacfell and the twists and turns of Manxland. Also, it is somewhat strathat both French and British support of motor races are a little shy of c petitions this year, the French very meso, although they appear ready to s port races that are being held outs

port races that are being new outs their own country.

In the possible event of the mc cycle Targa Florio receiving suffici support this year, it may eventually come as important to French and ot Continental riders as our T.T. races

to us.

There appears to be a certain glam about these island events. First, the is the fascination of a semi-holiday practising and tuning up; then ther the journey to and from the island; a lastly, there is a certain amount of free of action that does not appertain to other event, either for motor cycles cars, that has ever been held in the islands or upon the mainland.

We understand that the Automo Association is endeavouring to person architects and local authorities to pro-efficient garage accommodation in housing schemes undertaken under to control.

The Editor does not hold himself responsible for the opinions of his correspondents. All letters must be addressed to the Editor, "The Motor Cycle," Hertford Street, Coventry, and must be accompanied by the writer's name and address.

PROVISIONAL PRICES.

Sir,-Seeing a letter in your issue of February 5th from A.J.M., Boltom," re the above, I would like to give my experience. Like "A.J.M.," I required a runabout, and wrote to Messys. Alexander, Edinburgh, a matter of 300 miles from here, stating my requirements, and asking what prospects they could offer me, and received reply per return telling me what to expect if I cared to go on their waiting list, which I did, and I am pleased to say I have now received my machine. Nothing could have been more businesslike or courteous than the way they treated me. I may say they did not ask for any deposit, or wish to bind me in any way. I do not know this firm beyond this recent transaction. Stourbridge.

Sir,-The announcement of the Sopwith Aviation and Engineering Co. of their intention to increase the price of the A.B.C. motor cycle from £85 to £130 must have come as a rude shock to prospective purchasers. As one of the latter, I-should be more interested if they would answer the following question, instead of trying to justify their action in advertisement pages:

Are they prepared to allow some concession to those who ordered their machine twelve months ago, at the much advertised price of £85, with delivery promised by their

agents last year?

They may be interested to know the reason I did not complain when they put the price up to £110 was because I was fully aware of the reasons given by them in your issue of the 12th inst., re materials, labour, etc., therefore I thought their action justified and legitimate. Now I think they have gone too far.

Birmingham. KEENLY DISAPPOINTED.

THE "T.T." AND "TRADE."

Sir,—One reads with very great interest the letter which has been published by the Triumph Cycle Co., Ltd., and, if truly represents their views, it would be difficult to find a more conscientious letter to the trade and motor cycling public alike. It clearly states their circumstances, over which, I take t, they have had no control, and in order to carry out their obligations to the trade, etc., they intend to reserve all their resources to attain this end. May their letter be a guide to other manufacturers.

All motor cyclists fully realise the enormous difficulties which manufacturers have been up against, and much patience has already been absorbed in waiting for the new nachine, and unless manufacturers give the whole of their ime, money, and resources to the production of that machine, which is already before the public, I fear even that valuable commodity, public patience, will be exhausted, and much pushness go over to other countries—a thing to be deeply egretted in these fimes.

Again, should not the Tourist Trophy Race be a gathering ogether of all manufacturers, leading and otherwise, with he whole of their best endeavours behind each machine mtered so that it represents a true battle of brains and pluck? No one regrets more than myself that the 1920 T.T. race, t held, will not have the backing of all manufacturers, and this is the case, I am firmly of the opinion it should be lelegated to such a time when those most interested can ive it their whole-hearted support without endangering their resent commercial interests.

No words of mine are needed to lay stress upon the great waste of time and money and the disorganisation such events

After all, a Tourist Trophy race is not a sine gua non of coduction.

THE MAN IN THE STREET. production. London, S.W.

Sir,-We have noted with interest the recent letter from the Triumph Cycle Co., Ltd., stating that they have decided not to build special machines for the Tourist Trophy Races and to abstain, during the coming season, from those trials where specially constructed machines are essential in order to ensure success.

We should like to say that we take an exactly similar view with regard to the Tourist Trophy Races, and have decided that we will not build any special machines for this race, which further means that we shall not participate in the

Tourist Trophy Race this year.
We entirely endorse the remarks already made as to the enormous demand on output which the production of special machines entails, and we consider that, in view of the delay machines entails, and we consider that, in view of the delay in post-war reconstruction owing to labour unrest and other difficulties, it is far more important to the industry and to the nation that regular output of standardised machines should be thoroughly established, both for home use and particularly for export than that valuable time should be expended in preparing special machines for special events, because desirable these events may be under ordinary circ. however desirable these events may be under ordinary circumstances. ZENITH MOTORS, LTD.

The Bleriot runabout on the road. (A road test of this little four-wheeler will be found on page 228.)

A COMPETITION FOR SCHOOLBOYS.

Sir,-Now that competitions are again flourishing, after many years of war, would it not be possible for The Motor Cijcle to organise another Public Schools' hill-climb similar to one arranged some years ago, which was so successful

and well attended.

I am sure such a competition would again appeal strongly to the motor cycling fraternity in Public Schools, and most Public Schools would be very well represented. The motor cycling spirit in schools is so strong at the present time that I am sure the competition would be accepted unanimously. I would propose a hill in the Midlands again, or on Shrews Hill, Broadway, where the last climb was organised. I am sure I am not the only Public School boy who would

welcome such an event in the near future.

IN BONO VINCE. Ramsgate. [We are very much obliged to our correspondent for his suggestion. The matter is being brought to the attention of the Public Schools M.C.C., whose sphere it is to organise competitions for present and past members of the leading Public Schools.—Ed.]

MUDGUARDING.

Sir,—The article in your issue of February 5th on "Comments on Mudguarding of To-day" was of considerable interest, but as I put The Motor Cycle down I said to myself. "I do not get in the mess some riders seem to do, neither do I get on my person much muck or slush."

I have been motoring continuously since October in all weathers, and knowing my overalls seldom, if ever, get a brush, I examined them, and found mud around the ankle of the left leg only, where it seems to get a rehound off the sidecar. As for splashings around the neck and face, the sidecar. As for splashings around the neck and face, they have never been my experience. I do not ride furiously everywhere, neither do I crawl. My machine and sidecar get very dirty, except the engine, which gets no mud other than underneath; but in whatever weather I ride, and whatever road conditions, I always seem to come out clean.

I have examined my mudguards again to-day, and it seems to me that the makers of the "AJS." have evolved a system of protection which is thoroughly efficient, graceful in design, and which avoids anything approaching freakish and ugly mudguarding. This is my experience, after considerable work with this machine. I do not know what other 1 has of the same machine find.

My inexpert criticism of mudguarding in general is that the guards are far too close to the wheels, and generally too small for real protection.

LEONARD A. WIDE.

SPEED WOBBLE.

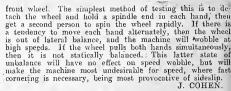

Sir.—In your issue of February 12th a correspondent.

"S.A.B.," mentions that he has never failed to cure a "wobble" in less than a couple of seconds.

Does he realise that at a rate of sixty miles per hour he will have covered 176 feet in that time?

I have had machines with twisted frames that showed no

tendency to wobble, but were practically impossible to ride

Sir,—There has been much discussion of late with regard to that disconcerting phenomenon of "speed wobble," and I should like to suggest a theory which, to my knowledge, has not before been advanced. I am referring to a belt-driven direct drive T.T. machine. I have noticed that the tendency to wobble is much greater with a tight belt than with a fairly slack belt. In fact, a short time ago I experienced a wobble which I directly attribute to the tightness of the belt on that occasion (owing to the fastener pulling through and a hasty repair).

and a hasty repair).

Now, with almost all motor cycles, the engine has a slight lateral movement, due to the spring of the frame. Put your foot against the pulley and press. The engine can invariably be "swung"—if I may so call such a slight movement—a perceptible amount, where the modified diamond type of frame is used, and this swing, or vibration has a

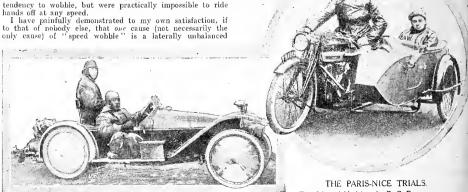

definite period.

Now, especially in the case of the belt-driven machine referred to above, the snatch of the drive will tend to produce such a swing, as the belt pulleys, to allow the engine to assume a central position, are of necessity rather overhung.

· If the beat of the engine either corresponds with or bears some simple numerical relation to the period of swing of the engine in the frame, this will set up violent lateral oscillations, with consequent effect on the steering, and subsequently, as in the case referred to, considerable effect on the steerer also.

Birmingham,

Sir.—I have seen a lot recently in your paper re speed wobble. It is not my intention to enter into any long discussion on the question of stability, etc., but I would suggest that anyone who suffers from wobbly steering (especially at all speeds, as in "Ixion's" case, in your issue of January 22nd) should make sure that their spring fork springs are of the same strength; the majority of people, when they unfortunately break a spring, simply fit one new one, and not both not both.

The 8 h.p. A.V. driven by R. C. Empson. (Inset) An Anglo-French entrant of a 4 h.p. Douglas side ar, M. E. G. Fery, of Gloucestershire, formerly well known in French car racing circles.

Dangerous Front Brakes

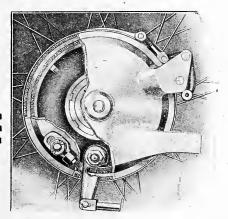

Referring to the death of a Motor Cyclist, the Coroner, Mr. S. Ingleby Oddie remarked, "The authorities should consider whether the law requiring a motor bicycle to be fitted with a front brake should not be altered so as to allow both brakes to be on the back wheel," (What the law says is:-" Two independently operated brakes.")

We have always recognised the importance of fitting efficient brakes, and all

Motocycles

for the past 10 years have been equipped with two brakes on the rear wheel.

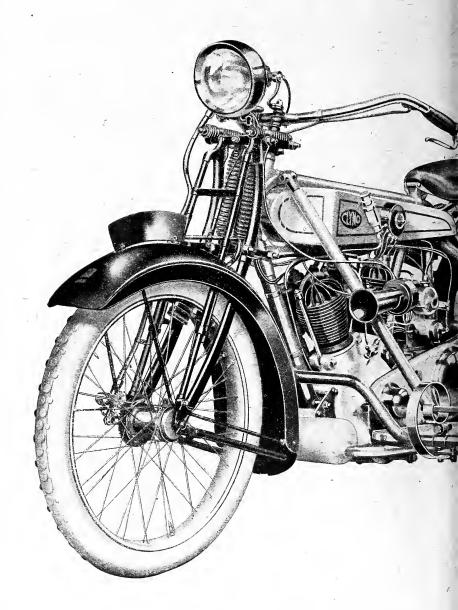

This is only one of many points in which the INDIAN excels.

SEND FOR CATALOGUE.

HENDEE MANUFACTURING Co., "Indian House, 366-368, Euston Read, London, NW.

Telephore—Museum 1643. Grans—"Hendian, Eurond, London AUSTRALIA—109-113, Russell St., Melbourne. AFRICA—Indian House, 127-9, Commissioner Street, Johannesburg Indian House, 579, West Street, Durban. Indian House Strand Street, Port Elizabeth

In answering this advertisement it is desirable to mention "The Mator Cycle."

I had a 21 h.p. Douglas which suffered from this trouble. I eliminated all other sources, such as frame distortion, link wear, etc., and found the above to be the cause. The difference in frequency on hitting an obstacle is accentuated by the free fit of the spindles and links (spindles, etc., are not

yet made to 1500 in. elearance).

I have owned a 23 h.p. A.J.S.; it used to wobble, but I did not at that time (1913) go into the matter.

With a Rudge-Multi (a single central spring) I never had a single webble, although its maximum speed was greatly in excess of that of the other two machines.

I have had no experience of cantilever leaf springs, but should like to hear of their behaviour, if such information is available. WALTER HARE.

FINDING A WINNER.

Sir,-This question has admittedly become a real problem for trials organisers to solve owing to the reliability of the

modern motor cycle.

The policy of freak hills and surfaces, combined with numerous watersplashes, does not appeal to many riders as a sound means of eliminating competitors in trials, and surely it is now time for those who frame the regulations in such events as the Six Days Trials to endeavour to encourage a machine which, though strong and reliable, is yet of lighter weight than the present standard-at any rate for solo work.

The objection to many present-day trials is that compara-tive engine inefficiency and excessive weights will not put a machine out of the running for a premier award, provided the machine is reliable, owing to the fact that abnormally

low first speeds are as a rule fitted.

The following is a suggested scheme for finding a winner in long distance reliability trials which is not open to the above defect :

First, after the course has been chosen, the maximum gradients to be accended would be published for the benefit of all competitors. Secondly, a certain minimum all-out speed on lowest gear would be fixed by the judges for all types of machines. Thirdly, the usual system of marking for reliability, general condition at the end of trial, etc., would be retained.

With regard to the minimum all-out speed on lowest gear, this would be arrived at as follows: The judges, either by their expert knowledge of modern machines, or by practical trial of machines of various sizes on a steep hill, would, having due regard to the difficulties of the course to be covered, definitely fix speeds for three or four machines of different engine capacities, which speeds they would consider should be attained on lowest gear by these machines. From these three or four points a curve would be plotted connecting engine capacity with minimum all-out speed on lowest gear so that this speed could be at once obtained for any machine.

For the sake of example, 25 m.p.h. might be fixed as the minimum all-ont speed on lowest gear for a machine of 500 c.c., 32 m.p.h. for one of 500 c.c., and 40 m.p.h. for one of 500 c.c., and

1,000 c.c. A curve would Z then be obtained something like the sketch herewith. A different bacurve would be barrived at for Hg

arrived at for 150 to 160 to 1 Before the start of the trial all

trial all competitors would be electrically imed over a whort urlong or other hort distance at

heir fastest speed on lowest gear. These speeds would be oted, and any competitor who did not attain the minimum Hout speed on lowest gear as fixed for a machine of his ugue capacity would be disqualified.

At the end of the trial, which should contain several really

250 500 750 ENGINE CAPACITY IN C.C.

1000

0

tiff hills, but no freak surfaces, and also a high speed test i possible, a certain number of machines would perhaps have all marks for reliability, general condition, etc.

The winning machine would be the one out of the above number for which the fraction

Actual all-out speed in lowest gear in timed test Minimum all-out speed in lowest gear as fixed

worked out to the greatest figure.

Thus, reverting to the figures given above, a 500 c.c. machine which did 36 m.p.h. in its low gear speed test would be beaten by a 250 c.c. machine which did 30 m.p.h., both machines having obtained full marks for reliability, general condition, etc. As for the former, the deciding factor

would be $\frac{36}{52} = 1.125$, and for the latter $\frac{30}{25} = 1.2$.

It will be observed that in the foregoing no account is taken of the weight of the machine. The reason for this is that it is assumed that the conditions of the trial, coupled with the reliability, general condition, etc., tests, should be so framed as to weed out any machines not strongly enough built or equipped with light and shoddy fitments or accessories. Light sound machines would be directly encouraged owing to the fact that they could carry a higher gear than their heavier companions, and hence put up a better speed in the low gear test.

It may be thought that fixing a minimum gear ratio

dependent on engine capacity would give as satisfactory results in a much simpler manner, but a little consideration will show that this would probably encourage the slow-speed engine which takes a high gear at the expense of the high-

It will be noticed that if a curve of the nature indicated above was once fixed by competent authorities, by merely deciding a minimum all-out speed on lowest gear for one size of engine and altering the scale of m.p.h. accordingly, this curve could be used for trials of varying severity.

With regard to the practical difficulties that arise over

obtaining the gear ratios required for any trial, it would seem that on the average three-speed machine a suitable chain sprocket might be fitted to give the lowest gear required, on second for solo machines, and on first for sidecar machines. In the former case, the operating mechanism would be sealed so that first speed could not be used. In the case of variable gear machines, once the required lowest gear is decided on the mechanism operating the gears could probably be sealed so that it could not be used to obtain a lower gear.

lower gear.

There are undoubtedly various objections to the above scheme for "finding a winner," and probably far sounder methods can be thought out; but if any alteration can be brought about so that a machine, equal to the present-day machine in power but of lighter weight, is definitely encouraged, I for one at least will consider it a step in the right direction.

F. P. DICKSON.

Sir,-Your columns have recently contained suggestions as to the 1920 A.C.U. Six Days Trial. It has been advocated that the test should conclude with a speed trial at

This may have much in its favour, but, after all, a track test, while searching as regards the engine, does not prove a great deal as regards the clutch, gear box, and in the case

of sidecars, chassis design.

I should like to suggest, as an alternative, a test of the

following description:

Assuming the trial to be held in the Newcastle-on-Tyne area, there is within forty miles or so of this city a section area, there is within forty miles or so to this city a section of country which, in about sixteen miles, contains four real test hills. Two of these are, practically, what may be termed "low gear" hills, and another is a grind, about three miles in length, which rises from 900 feet above sea level to 2,000 feet. Include this section in the last day of the trial. Take each competitor's time when he enters, and what he leaves the certified. and when he leaves the section. Allow sidecars about fiftyfive minutes and solo machines about forty-eight minutes for the section. Deduct numerous marks for every minute in excess of these times, and also for failure on any of the hills, which should be under observation, and the problem of "find the winner" would be almost solved.

Petrol consumption should also, in respect of the whole . of the trial, carry much weight.

As a plea for the standard machine, may I suggest that none but teams of standard machines be allowed to enter for C. J. LEATHERBARROW. the team prize.

MOTOR (YCLE

As Usual,

Most of the daily papers have reported the Paris-Nice Trial as a race and gave the credit to an American machine as having won because it was the first to arrive at Nice.

20th Squadron R.A.F.

It is proposed to hold a reunion dinner in London. Will all past members please communicate with J. A. Hone, 23, Palmerston House, Old Broad St., London, E.C., who will inform them when defi-nite arrangements have been made?

The British Industries Fair.

The British Industries Fair, held concurrently at London, Birmingham, and Glasgow, opened last Monday. Upwards of seventy manufacturers in the motor cycle industry are exhibiting at the Birmingham section, which is housed at the Castle Bromwich aerodrome. Yester-day, Sir Alfred Mond, on behalf of the Government, held a reception at Olympia to the foreign visitors, when the Right Hon. Sir Auckland Geddes, K.C.B., M.P., President of the Board of Trade, received the guests.

T.T. and the Trade.
In addition to the Triumph Co., several In addition to the Frumph Co., several other leading manufacturers are not supporting the Tourist Trophy Races this year. Among them are the B.S.A., Zenith, Ariel, Velocette, Precision, Indian, and Rudge.

Mr. V. Holroyd, of Rudge-Whitworth,

Ltd., informed us that, owing to the fremendous difficulties with which manufacturers have had to contend as a result of the moulders' strike, the loss of production entailed by the concentration of a staff of experts on preparation for the race could not be faced under existing trade conditions.

It will be remembered that Mr. C. G. Pullin won the 1914 Senior Race on a Rudge-Multi, and it is therefore of more than passing interest that the makers of this machine will abstain from the 1920 competition.

Have you Signed the Petrol Price Petition?

Colmore Cup Trial.

The Colmore Cup so far has always been won by a rider having a single syllable name. In 1911, W. D. South (Scott): 1912, Frank Smith (Clyno); 1913, W. B. Gibb (Douglas); and 1914, Norman Lea (Lea-Francis). Seventy entries have been received for this year's event, and no less than thirteen teams will compete.

The "Y" Spring Fork.

The "Y" spring rork.

The "Y" patent spring fork described last week is the invention of Mr. S. J. Young, late works manager of the F. Aslett Coulson Engineering Co. Mr. R. S. Whaley, of the Patent Spring Fork Co., draws our attention to this fact, and also that his concern is manufacturing the fork in conjunction with the "Y" Engineering Co., of 1, Machise Road, Kensington, with which Mr. Young is associated.

Clubs Co-operating in South Wales.

Three South Wales clubs are co-operating in their competitions this year. clubs are the Carmarthen and District M.C. and C.C.C., the Welsh Auto and Swansea Valley M.C.C. In addition to the open speed event allocated to the three clubs by the A.C.U., which will be held in August, the clubs intend to run six competitions, open to members of the three clubs. This decision is the result of an inter-club conference held recently in Swansea, when a committee was formed consisting of three officials of each club.

Owing to the very cordial relations existing between the clubs, the scheme should result in South West Wales having seven well organised and well-supported events for 1920 which are quite distinct from purely club events.

Eighty were present at the inter-club dinner that followed the conference.

Petrol Prices Protest.

The petition to the Premier, organised by the A.A., against the high price of petrol, has been strongly supported everywhere in Great Britain. Within twenty four hours of the distribution of the petition forms over 10.000 signatures had been received by the A.A.

At a largely attended meeting of the Council of the Federation of Grocers' Associations, held at St. Pancras Hotel, last week, a resolution was passed unanimously pledging the Federation to giving their full support to the petition, and resolving that a copy of the petition should be circulated to each individual employee, asking him to secure nineteen other signatures besides his own.

When it is realised that the Federation employ some 160,000 persons, the support of the Federation should mean a minimum of at least 1,000,000 signatures to the Automobile Association's petition, apart from all other sources. From the point of numbers the petition should be a great success.

The London-Land's End Trial at Easter.

The route of the M.C.C. Easter competition to Land's End has now been decided. The start will be from the Berkeley Arms Hotel, Cranford Bridge, Hounslow, at midnight, Friday, April 2nd. Arrangements have been made whereby competitors may obtain supper at the hotel from 8 p.m. onwards.

at the hoter from 6 p.m. onwards. From Hounslow the route will bes via Maidenhead, Reading, Marlborough, Devizes, Bridgwater, Porlock, Lynton, Barnstaple, Launceston, Truro, Penzance. The breakfast stop will be Bridgwater, and luncheon will be taken at Launceston

Competitors for the Jarrott Cup and other cups must climb Porlock and Lynton without leaving the saddle or having a wheel stop.

The course is of a very sporting nature, and no doubt it will attract a great number of entrants from the club's large membership, the event being for members

Blizzard in Yorkshire last Sunday. A Sheffield rider's B.S.A. on Owler Bar.

ACROSS FRANCE IN FOUR DAYS.

From Paris to Nice over Atrocious Road Surfaces. Magnificent Scenery on the Esterels and Riviera. 45 Survivors of 69 Starters. British Machines Prominent in the Results.

FIRST DAY. — Paris-Montgéron (start), Fontainebleau, Sens, Auxerre (lunch), Montbard, Val Suzon, Dijon. (193 miles.)

HITHERTO the annual Paris-Nice Trial has been regarded as an enjoyable cross-country trip appealing to private owners. That was the case in the trials held in 1913 and 1914. Put this year's competitors had quite an eye-opener. Long daily distances over varying road surfaces, sometimes atrocious and quite as bad as some of those encountered in the war zone, coupled with the time schedule, robbed the event of interest from the viewpoint of the pleasure seeking amateur.

In short, the trial, which lasted four days, proved a strenuous one. Some consolation was obtained from the magnificent scenery, particularly near the Franco-Swiss frontier, on the second day, and also approaching the Côte d'Azur. The Riviera itself formed a delightful change from our English climate. No fewer than twenty-four starters never reached Nice, their experiences being rélated hereafter. So bad were the roads, generally speak-ing, that several successful competitors, who had intended riding back, abandoned the idea and came home by train. Another year, if the event is to continue to attract the private owner as an enjoyable method of spending ten days' holiday, the daily distances must be cut down, and good average roads chosen. Frame fractures hundreds of miles from home are no joke, particularly to an amateur. No such contretemps would have been experienced had it been possible suitably to adjust the pace to the state of the road surface.

The Early Stages of the Run.

In the last issue of The Motor Cycle we described the atrocious road surface and paré from Paris to the official starting point at Montgeron. Very wisely this stretch had not been included in the early morning start in darkness, but it nevertheless acted as a foretaste of what was to follow, and Parker (Norton), who was

suffering from a chill, elected not to start. Every hotel in the village was crowded, three or four occupying each bedroom, which became the usual order as the miles were left behind.

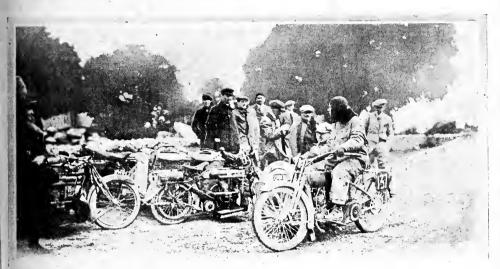

Motor cyclists, car owners, and countryside spectators were much in evidence at the start, with which was associated the usual hubbub and excited conversation of non-competitors, who would persist in calling it a race. The names of the sixtynine starters were given in our last issue.

Pot-holey roads at the outset damped the spirits of those who have been trained to regard the roads of France outside the war zone as superior to any in the world. Heavy transport lorries and fast cars have contributed to cut up the surface, and jolts and jars were the rule. Just before the first control at Fontaineblean (40 kilometres) we caught up Max C. Moriss, the frame of whose machine had snapped clean through at the down tube, the engine and the front of the side-

car resting on the ground. Mr. and Mrs. Moriss were fortunately unburt, though the machine slithered along the ground to the extreme left-hand side of the road. Guignet (twin G.L. sidecar) suffered the experience of the left handle-bar breaking clean off, evidently due to a flaw, but with the throttle control on the right bar he pluckily continued without hesitation. Fontainebleau was the first of the numerous time controls. Passing the magnificent Château of Fontainebleau on our left we turned along the Sens road, appreciating once again the splendidly elear signposts and kilometre stones of France. Uren (Edmund-Jap) was passed later pushing his machine in an endeavour to start, but without success. Hereabouts on the good road to Sens, a Grand Prix racing Itala car swept past us at a good mile a minute. Naas (A.B.C.) was early in trouble, which perhaps is not surprising, as the three machines were only finished the night previous to the

Two of the winning team in the Paris-Nice Trial, Captain C P. Wood and W. L. Guv (34 h.p. Scott machines) traversing pavi

At the summit of Mont Agel competitors were entertained to tea by the Nice Golf Club. Our photograph shows a group of competing machines outside the golf club house.

start, and were scaled but a few hours before the trial began. Auxevres was the appointed place for lunch, the machines being parked in an enclosure in the open square, and inspected by an interested crowd.

Over Undulating Roads.

Then followed a run over open moorland roads with many a twist through the Morvan district in the Côte d'Or, where occasional stragglers were encountered, though for the most part the competithough for the most part the competi-tors ran regularly; indeed, most of the marks lost by the riders were for arriving too early at controls. Owing to a mis-miderstanding of the rules, the riders contested this. Dupuis (B.S.A.), with his wife in the sidecar, was delayed by is when the speed, we there is broken front spindle, but, having a spare, he fitted it, and his pace theretiter was astomating. The smart discreticeled Bedelia was held up temporarily a broken belt hereabouts.

Montbard was the point selected by Dr. Low for his audiometer tests, which istrument had been conveyed by W. oode aboard his Hispano-Suiza saloon.

Before reaching Val Suzon, the non-top section, there were many miles of leserted roads reminiscent of the Yorkbire moors, and as darkness was pproaching those in the rear of the rocession had to light up. We ourselves sperienced trouble, and were among the il end of the procession as a result, lough we were able to pick up the ragglers and learn their troubles. Notithstanding the quick descents and sinuus nature of the course, several French ders actually continued without lights—
remarkably dangerous procedure for temselves and other road users, but the

iles of the road in France are notoriously ose.

The official cars were delayed by trouble on several occasions, one stopping finally on the first day with a burnt-out big end. There was not a competitor who was not delighted to reach Dijon that evening, after a tiring run of 287.6 km; Nine riders failed to report at the finishing control that evening, and no fewer than twenty-eight had marks deducted.

Naas (A.B.C.) was towed into Dijon by a Douglas rider early on Saturday morning, and on the tramlines executed a hair-raising skid at the end of the rope affixed to his machine. The risks the French riders run are amazing! Isodi (Stucchi) also arrived a day late, but his confrères on other Stucchi machines are making an excellent impression.

SECOND DAY .- Dijon, Châlon-sur-Saône, Macon, Bourg, Nantua (lunch), Meximieux, Lyon. (1853 miles.)

Once again in the dark, and fortified only with café and a roll, the sixty odd competitors set out from Dijon on Saturday. To-day the road surfaces were better, and the scenery in parts magnifi-cent, with an impression of Switzerland as the Juras, the footbills of the Alps were crossed. Several went off the course, but managed to regain the correct route. Brunell's two stroke Triumph and Greenwood's two-stroke Connaught are the surprise of the trial, for they run most regularly and have climbed all hills with ease. The Connaught is a 1914 with ease The Connaught is a 1914 model, with Armstrong three-speed hub gear. The Scott rider's team is complete, also the Sunbeam, and Harley-Davidson men are runing like clockwork. One can well believe already that the team prizes are to be closely contested.

Rex Mundy's 5½ h.p. Rover is going extremely well; but, curiously enough, his French passenger speaks not a word of English, and Mundy admits that his French vocabulary is extremely meagre!
Their signs, signals, and grimaces are,
consequently, distinctly amusing.
The twin-cylinder disc wheel Biéricts

have been suffering tyre trouble, but their riders seem to have no feeling for bumps when the moment arrives to make up the road became very trying.

At Premeaux we caught up Major Empson, at first imagining that he had suffered a horrible accident, for we saw in the distance his A. V. monocar on its side. Closer investigation, however, showed that he had turned it over intentionally in order to fit a new rear spring, the original one having broken. Many hours later he caught us up, and continned to the end.

time to the end.

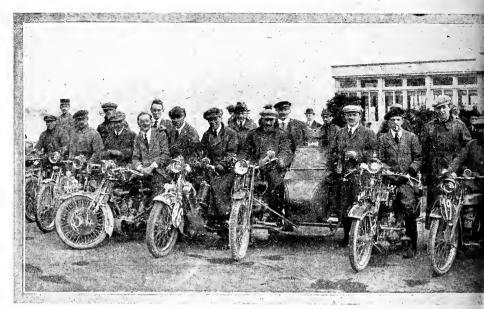

M. Psalty, with Mde. Psalty in the sidecar of his single-cylinder Rover, is putting up a plucky performance, and is continuing with a broken chain stay supported by straps. Hitherto the course has not proved severe, so far as gradients are concerned.

A Real Hill-climb.

The first real test hill of the trial came to-day after Bourg, four miles of 1 in 10, stiffening to 1 in 8, being observed. Kaye Don (twin Zenith) thoroughly enjoyed himself on these ascents. On the corresponding descent of the Berthian M. Gaston Sweerts warned the competities of an impending brake test. The per-

or an impending prace test. The performances generally were good.

Just before reaching the brake test, at one of the numerous turns Pletsier (Harley-Davidson sc.) overturned while trying to avoid a wall, and managed to

throw his passenger clean over it. Both got up again undamaged and resumed, but the sidecar frame had been badly strained, as subsequent experiences proved.

The weather was getting noticeably warmer as the trial progressed further South, and the limestone roads threw off much dust. Sreame Fenton (A.B.C.) stopped finally with piston trouble, and Fred Dover (Triumph sidecar) failed to arrive at the luncheon stop owing to a broken sidecar frame.

Some of the other machines were already showing signs of battering, for sidecar passengers were in two cases observed carrying the mudguards of their sidecars. Towards Lyons, the end of the second stage, the road surfaces deteriorated again, and the one topic of conversation that evening was the unexpected severity of the trial, the miles of tram setts encountered on entering Lyons providing the finishing touch to a strenuous day. Quite a large crowd welcomed the arrivals, the buzzing Scotts greatly attracting the attentions of the Lyonnais. who are great admirers of the English. The Moto Club de Lyon is an active body of enthusiasts, who gave the riders a very hearty welcome during the evening.

THIRD DAY.—Lyons, Serrières, Valence, Avignon (lunch), Orgon, Salon, Marseilles. (205½ miles.)

Whatever the riders thought of the two previous stages, the third day was infinitely more difficult. Resuming in the pale monolight, competitors remaining set off for Valence by the road on the right bank of the river Rhône. Starting from the train (Frinius, a Blériot carburetter caught alight, one of the A.B.C.'s having also caught fire momentarily en garage.

It was cold and misty—far colder than hitherto—and when actually in the Rhône valley the mist and awful roads rendered a 19 m.p.h. average somewhat risky. The riders were soon, too, enveloped in frost, the whole countryside being covered with a white mantle of hoar frost. But the roads! Words can hardly describe the ruts and pot-holes. It is no exaggeration to say that many were a foot deep. Passing competitors was next to impossible, and yet the sidecars scurried along maryellously well.

The outskirts of Lyons formed a test in themselves. Brunell, who had spent an uncomfortable night (since Dover was carrying his night apparel and had failed to turn up), preferred to ride between the tram lines as most others did, but, when after some distance the track sud denly veered to the right-hand side of the road, and a questionable macadam surface appeared, he elected (in the dark of course) to continue along the lines, and, as a result, his front wheel dropped into a deep square gap between the rails and buckled the wheel. Brunell was precipitated over the handle-bars, but, providentially, he was unhurt, though his front wheel was crumpled up beyond repair. A minute later Chapman (Morgan M.A.G. Runabout) almost repeated this performance, but Brunell yelled out in time to enable him to bring his runabout to a standstill a bare foot before the chasm! This Morgan, the only one in the trial, is standing up remarkably well, though one acquainted with the roads would pronounce a three-tracker to be an impossible vehicle under such conditions.

That Never-to-be-forgotten Rhône Valley

Soon we caught up Rutherford (Sunbeam) repairing his second puncture, which put him sixty-five minutes behind

mosa, so that the group on the promenade.

time, but he nevertheless managed to catch up again. P. W. White (Sunbeam sc.) and Douglas Hawkes (A.J.S. sc.) have been noticeable for their consistent and quiet running, and their machines have so far stood the gruelling in a wonderful way. Before Givors we over-took several riders who were ahead of time and resting, but it was a relief to every man when, chilled to the bone, that never-to-be-forgotten Rhône Valley, with its enormous pot-holes and ruts, was left behind at Avignon. Before the lunch stop at the last-named town we caught up d'Argollo (American Excelsior). who had run out of petrol and was beginning to think that all was lost. His We sent him on his way rejoicing, and received his grateful thanks. Incidentally; it should be remarked that the petrol arrangements throughout were excellent, and no difficulty was experienced in ob-taining supplies, the price varying in our case between 6 frs. 50 c. and 9 frs. per can of five litres (about one gallon), which is cheaper than in England at the present rate of exchange. The Imperial team complete, Mundy The New Hill (Triumph), the G.L.'s, Sunbeams, New Imperials, Scotts, and Nortons were as usual well up to time at the luncheon check.

French Summertime Commences.

On approaching Avignon, magnificent views were obtained. The competitors passed beneath the fine Château of Villeneuve, and from the bridge first saw and then passed through the wonderfully preserved walls of Avignon.

At this point we overtook Barthélémy (3½ Rover), who has ridden most regularly throughout. Dubost and Dupont of

the two-stroke Moto-Solos are also most consistent performers among the French riders.

By five-thirty (Sunday was the first day of French summer time), all the survivors were through Salon, the usual crowd welcoming the competitors at the control. Punctures, as usual, were a feature of the closing stages until arriving at Marseilles. At the sea port the paré and tramlines caused several falls but no serious damage, though the front sidecar spring of Hawkes's A.J.S. broke, rendering the going uncomfortable for his wife. G. Hill (Triumph) broke his rear spindle, but undaunted earried on to the end, though his back wheel had quite half an inch of play.

The manner in which the French iders of the Harley-Davidsons, Indian, and Excelsiors blaze along, stopping every now and then to touch up any necessary parts, is an indication of the keen competition existing between them. On one occasion we were travelling at 40 m.p.h. when a Harley sidecar easily passed us in a huge cloud of dust. A French rider whose consistent running has evolked general praise is E. G. Féry (4 Douglas sc.). Féry speaks English fluently, having spent a long time in this country. He has a cork leg, the result of an accident at Brooklands fourteen years ago, but as a private owner he manages his machine with remarkable dexterity. Columbel on a 23 Donglas is riding equally consistently.

One of the 1920 French models, the Benoit-Gonin—the driver of which was kissed on both cheeks on arrival at Lyons, where the Benoit-Gonin works are situated—is going splendidly. The Moto-Solo two-strokes are also splendid little

Motor Ccle

The Paris-Nice Trial .-

lightweights, judging by the way they keep up to time. Rex Mundy finished the day's run with straps supporting his chain stay and sidecar lug, which had snapped, whilst Psalty (Rover) had made a splendid roadside repair to his sidecar spring with a shackle and yards of insulation tape.

FOURTH DAY.—Marseilles, Brignoles, Fréjus, Estérel, Cannes (lunch), Antibes, Nice, La Turbie. (140 miles.)

A daylight start was enjoyed on the last day—probably the most interesting stage of all from a scenic point of view. The early portions, as on previous days, were over atrocious paré, and miles of it, too. Pitfalls everywhere awaited the nuwarv.

Not an hour after leaving Marseilles, Victor Horsman, whose performance on a Norton has not received special mention so far simply because be has run consistently throughout and been on time at all controls, discovered that he had left his money in the hotel bedroom at which he stayed. He promptly wired the manager, and it is to be hoped that he may recover the large sum he had with him. His stable companion, Harold Petty, was unlucky in another way. On one of the turns eight kilometres out of Marseilles, he encountered a car, and in the tight corner he found himself adopted the English rule of the road and swerved to the left. As a result he collided violently with the car and suffered a broken nose. Several British riders stopped to render assistance, and he was taken on the car to a doctor. His machine was badly damaged. The going improved towards Brignoles, but here Fery (Douglas sc.) was late, and lost four marks, having stopped to adjust a tappet, whilst Pletsier (Harley) was late owing to a broken indexar coupling. Hawkes also found a fracture in the sidecar frame, his

wife consequently adopting an uncomfortable seat on the carrier.

On the Esterel Mountains.

Outside Le Luc, Milner (Diamond-Jap) broke a valve spring, was some time tracing the trouble, and then could not remove the spring. He lost much time, yet stuck on gamely, but in endeavouring to make up time on the descent of the Esterels, he fouled a corner and he and his machine turned three somersaults, so he told us. The forks were bent and rubbing the tyre, the mudguard crumpled so badly that he had to remove it, but, not to be beaten, he carried on to the end, only to miss an arrow at the top of La Turbie. Near the beautiful Esterel mountains the scenery was superb and the gradients long and tiring, though beautitully engineered, and not really steep. There were no failures and the test provided proof of the fact that the riders generally possessed abundant engine power, and it was only the execrable roads which were serving to swell the casualty list. The descent of the Mediterranean side was more rapid. Fréjus, Psalty punctured and found seven holes caused by a pin in his spare tube, which he had hitherto carried in a coil on the handle-bar.

On the handle-bar.

Nearing Cannes, glimpses of the blue Mediterranean were observed, and the competitors' spirits obviously rose several degrees. Entering Cannes, a long procession of cars—many British—were encountered. We passed Grapperon (Blériot) with a seized engine. A goodly crowd had assembled on the promenade to greet the hungry riders who had survived 6½ hours' riding on coffee and a roll. Machines and riders were promptly decorated with beautiful mimosa. Can it be wondered that lunch was welcome? The surroundings were brilliant to the tired riders, though the sun made but fitful appearances through the clouds. No rain had so far been encountered, nor was it until the last five miles of the trial.

Along the Côte d'Azur.

After lunch the road ran along the sea front to Nice, past glorious and sweetsmelling flower beds. Orange trees were abundant. But the end was not yet, for an ascent of the sinuous La Turbie and on to Mont-Agel was arranged with a slow and fast hill-climb. It was extraordinary and only typical of French rules of the road that the riders were allowed to race up while cars descended. Capt. Wood (Scott) encountered a car-during his timed ascent, and was forced into soft gravel and fell—but neither machine nor rider was hurt. Baker also touched Rex Mundy's Rover, but with no untoward result. Surprisingly fast ascents were made, the engines, apparently having lost little or no power, picked up immediately after rounding the hairpins.

Magnificent seascapes and panoramas of the Esterels from the Alpes-Maritimes were obtained from the top, where the riders were entertained to tea, as in the 1914 trial, by the Nice Golf Club. After a considerable wait, what time a huge but impatient crowd awaited the fina arrival of the competitors on the Nice promenade, the machines were parked in the fine new Atlas Garage.

The competitors, headed by Kaye Do (Zenith), arrived in a bunch, much to the enjoyment of the interested visitors to Nice, who saw the whole of them the second time in the space of a fee minutes. Of course, it was a race if French people's eyes, and even the manager of the Hôtel Atlantique, where we stayed, was more interested to know who had won than in the rooms for which we sighed, having had a total of ten hours sleep in four days. Truly, the competitors' lot was severe, but pity the journalists, whose lot is not easy, an who obtain no gold medals! But the run was worth it all. A tour from Parto Nice (preferably not too hurried!) surely the most delightful form of hold day imaginable.

Tom Gillies (3½ h.p. Sunheam), who was p'aced seventh in the general classification who succes. July completed the course

The Paris Nice Trial .--

BRAKE EFFICIENCY TEST.

A TEST of the brakes took place on the afternoon of the 17th inst. Before starting, competitors were allowed fifteen minutes in which to attend to their mounts. The way to the westernmost end of the Promenade des Anglais was led by M. Hamon, Dr. Low's fellow judge, and no one was allowed to pass

The afternoon was fine, but cold and vindy-in fact, not at all the kind which s to be expected on the Riviera.

Several incidents took place during the est. Don (Zenith) pulled up very martly, but the fact that he had his sipe in his mouth during the run much listressed the screent of police who kept he course, and he expatiated to us on he danger of such a procedure at great ngth. J. A. Newman (Sunbeam) ignored Il signals, and proceeded towards Mar-eilles at a rapid rate. Eventually, how-ver, he returned, and was allowed nother try. Greater misunderstanding as evinced by the gallant Frenchman ho drove the G.L. sidecar outfit over 700 tiles with a broken handle-bar, one half f which was missing. First, he ignored the signal to stop; then, at his second attempt, he stopped at the first line instead of the second; but the third time he did what was wanted. The performances are given in the tabulated list.

Silencers were tested as to their efficacy by means of Dr. Low's photo-electric audiometer at Montbard in the Côte d'Or and again at Nice during the brake test.

STARTING FROM COLD TEST.

DULL and rainy morning followed the arrival of the competitors at Nice, so the starting test took place in the huge garage.

Across the floor two tapes were stretched, and each motor cycle was wheeled by hand to the first one. At the word "go" the petrol had to be turned on, the carburetter flooded, and the engine started, either by means of the kick-starter or handle or by pushing. The time was taken from the word "go till the engine was firing properly. Most of the machines came through well.

Milner created great enthusiasm by making a quick start and vaulting with his feet on to the saddle. Don, who has no kick-starter to his Zenith and a damaged hand, made a brilliant start by pushing off.

Brunet's Blériot was badly gummed and refused to start. Pinney, whose Triumph was fitted with a special carburetter of his own, could not start.

A Sporting Afternoon Trial.

Severe Road Conditions in a Competition for the Longman Cup.

THE disappointingly small number of four competitors finished within reasonable time in the trial organised by the Ealing and District M.C.C. on Saturday last.

A sporting trial, indeed, the odds against which, the solo riders in particular, had to compete, constituted such a test for both rider and machine that but a few skilful riders survived. The starting and finishing point was at the Anchor Hotel, Ripley, from which twenty entrants were started by the

donor of the silver cup.

A route of approximately sixty miles was selected, which had to be completed non-stop, at an average speed of 20

CLUB NEWS.

Bournemouth and District M.C.C.

A general meeting of members is convened for 7.30 on Tuesday, March 2nd, at St. Ambrose Hall, Alumhurst Road. Bournemouth West, when it is proposed that the existing club be formerly wound up. A mass meeting of local motor cyclists will be held in the same hall at 8 p.m. on the same date, and will be presided over by Dr. George Frost, J.P. At this meeting it is intended that a new club and organisation shall be formed. All who are interested are urgently requested to attend.

Doncaster and District M.C.C.

It has been decided that a general meeting will be held some time in April, when it is hoped that all local motor cyclists will be present. The date will be announced later. Apparently there is a

lack of enthusiasm on the part of the members, which is most regrettable, view of the fact that in pre-war da the club was recognised as being one the most progressive in the North England.

Cambridge University M.C.C.

In the recent hill-climb at Croydon H B. A. Hill won the 600 c.c. Class on 4 h.p. Triumph in 30s.

North London M.C.C.

Although formed quite recently, club has made excellent progress, ands club has made excellent progress, and mow firmly established. Members a reminded that the opening run tablace on Sunday next, after which paperchase has been arranged for Mall4th, to be followed by a run of Stevenage on March 28th. Club News .-

Essex M.C.

On March 27th, an open hill climb, for motor cycles, will be held. All information may be obtained from the hon. organiser, Mr. E. J. Bass, Bishop's Stortford, Herts.

Hastings M.C.C.

An enthusiastic committee has been An enthusiastic committee has been elected for this recently-formed club, with Mr. Laurance Lyon, M.P., as president; Councillor A. Blackman, J.P., und Mr. J. F. Martin as vice-presidents, und Mr. F. E. Thomas as hon, secretary.

East Lancashire M.C.C.

The first annual concert will take place at the Scotch Café, Kingston Bridge, on March 10th. Tickets may be obtained from the hon. sec., Mr. W. B. Reeve, 25, Ditton Road, Surbiton. Activities will commence with the opening run on March 14th to Burford Bridge Hotel. Members should meet at the headquarters, Members should meet at the headquarters, Fex and Hounds Hotel, Portsmouth Road, Surbiton, at 2.45 p.m., the actual start being at 3 p.m., Mr. F. W. Barnes (captain) leading. Sole machines will start first, in pairs, at one minute internals of the start intervals, followed by sidecar outfits.

Public Schools M.C.C.

Candidates for membership will be elected at a committee meeting which will be held on the 27th inst. All paand present members of recognised publi schools are eligible, and intending candidates should forward their names at once to the hon, see, Mr. H. B. Browning, Loftus Hotel, Earl's Court, S.W. An attractive programme, which includes speed trials, hill climbs, and week-end runs has been arranged for this year.

South Birmingham M.C.C.

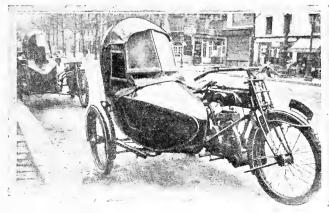

The committee report a substantial increase in the membership list, and there is every indication of a successful future. This evening the annual meeting will be he'd at the Mermaid Hotel, Stratford Road, at seven o'clock, when officers will be elected and a programme of events fixed for this year. The hou, sec., Mr. E. Boydell, 95, John Bright Street, Birmingham, will be pleased to hear from any motor cyclists who wish to join the

Exeter M.C. and J.C.C.

On the 13th inst, the annual dinner was held at the Globe Hotel, Major W. P. Martin, J.P., presiding. The prizes awarded to members during the past year were presented, also a silver cup won by Mr. Fry Allen in 1914. The membership total now stands at 62, and it is hoped that this number will be greatly increased in the near future. May 8th has been selected as the date for the opening run, which is the only fixture yet decided upon.

Banbury and District M.C.C.

The support given in the past having been inadequate, a general meeting will be held at headquarters, the George and Dragon Hotel, Horse Fair, Banbury, to-night, 'at 7.30, in order to decide as to the continuance of the club. All members are requested to attend, if possible. It is hoped that interested motor cyclists living in the district will communicate with the hon, secretary at headquarters, when full particulars will be given.

Sunbeam G.L. outfits used in Paris on taxi service. At present the fares are fifty centimes (5d.) for the first 666 yards, and ten centimes for every further 333 yards, and three francs per hour while " waiting."

AN OPEN FRAME MINIATURE.

A New Scooter with Single Lever Control

ALTHOUGH described as a scooter, the Autosco illustrated below is more a motor cycle than some of the machines of the miniature class, and illustrates the tendency for makers of such machines to fit larger wheels. The Autosco has 20×13in. tyres, and a frame which may be said to be a lady's cycle frame slightly elongated. The rear wheel is an Auto-wheel unit, while the front uses the same size rim and tyre.

One of the most interesting features of the little mount is the provision of a single lever for the complete control of the engine. A Bowden lever is located on the handle-bar, which, when in the closed position, releases the compression of the cylinder, whilst a small opening opens the throttle, and, at the same time, operates the device for releasing the compression.

A wide footboard, to which is attached a small stand, forms part of the equipment. The manufacturers are Brown and Layfield, 12, Empire Parade, Sydenham Road, London, S.E.26.

An open-frame lightweight-the Autosco

A SCOTIISH OPEN TRIAL.

* The Palmer Trophy Event organised by Glasgow Club.

N Saturday, March 6th, the Western M.C.C. of Glasgow will hold its open trial for the Palmer trophy, which will be held under the open competition rules of the Scottish A.C.U. A course of 125 miles has been mapped out, which has to be covered at a schedule speed of 20 m.p.h., and apparently the Glasgow club has been unable to find a better means of finding a winner among those securing maximum

marks than by instituting a secret check. Solo machines will be allowed two minutes, and sidecars four minutes, either way, while competitors more than ten minutes ahead of their schedule speed will lose one mark for each minute. Speed will lose one mark for each minute. Entry fees are: Manufacturers, agents, and non-members of the club, 10/-; non-trade members of the club, 7/6.

All competing machines accompanied

by their drivers and passengers must

report to the chief marshal at the chi headquarters, 250, Great Western Road Glasgow, before 9.30 a.m. on the day of the trial, and competitors will be started in pairs at one minute intervals started in pairs at one minute intervals the first pair leaving at 10 a.m. Thorganising secretary is Mr. J. R. Bell 2240, Great Western Road, Glasgow, an entries close on Tuesday, March 2nd the entries, however, will be accepte at double fees up to Friday, the 5th.

THE MONTREAL SHOW.

An Exhibition consisting chiefly of American Motor Cycles.

CANADIAN correspondent writes from Montreal, Quebec, that new models of a number of leading American motor cycle lines, as well as various exhibits of accessories, were seen at the National Motor Show of Eastern Canada, which was held in the Motor-drome Building, Montreal, last month. This exhibition was attended by dealers and riders from many centres of Eastern Canada, and much interest was taken in the latest two-wheel productions.

An Attractive "Indian."

One of the features of the exposition was a new Indian Scout model, which was was a new Indian Scott model, which was finished in white enamel, with silver mountings. This was displayed on a special stand in the exhibit of the Arlington Bicycle Co., Montreal, Indian distributers in the Province of Quebec, and the effect was heightened by the use of a spotlight, which added lustre to the machine. Two Indian Powerplus models, in regulation Indian red, an Indian sidecar, and several Indian bicycles were also shown. Another feature of the exhibit was a Smith motor wheel which was attached to an Indian bicycle.

Gravelin and Kennedy, Montreal, Quebec distributers of the Excelsior, Henderson, and Cleveland motor cycles. made a special feature of a 1920 Excelsion, which had been rushed to the show from Chicago, with its new mudgnard design,

THE NEXT STAGE!

MOTOR CYCLISTS interested in small or large cars should read

the forerunner of all motoring journals. Founded in 1895, it remains the largest and most successful automobile paper, and enjoys the greatest circulation. It is universally accepted as the representative British motoring journal.

FARREDOORDOODOODOODOO

new spring fork, smaller wheels, an larger tyres, as well as other refinement The new Excelsior made a deep impression upon the show patrons. A new Clev-land lightweight also had many admiren The Henderson was not shown.

British Goods.

A feature of the show was the displaced samples of British goods. There we two exhibits of this nature, and the served to introduce a number of Briti accessories and tyres. One of these exh bitors was the Associated British Indu tries of Canada, Ltd., the head office which is at Toronto. The manager this concern is S. A. Rowlandson, wh it will be remembered, was responsib in pre-war days for the competition of partment of Messrs. Rudge-Whitwort Ltd. The lines shown included Brooms. Sphinx spark plugs, Amac carburette Accles and Pollock steel tubing, Bat tyres, and Harvey Frost vulcanisers. -T other British exhibit was that of t British and Foreign Agencies, Ltd., Montreal, and this company also made display of various British lines.

A selection of questions of general interest received from readers and our replies thereto. All questions should be addressed to the Editor, "The Motor Cycle," so, Tudor Street, London, E.C.4, and whether intended for publication or not must be accompanied by a stamped addressed envelope for reply. Correspondents are urged to write clearly and on one side of the paper only, numbering each query separately, and keeping a copy for ease of reference. Letters containing ligal questions should be marked "Legal" in the left-hand corner of envelope, and should be kept distinct from questions bearing on technical subjects.

Combustion Space Design.

(1.) I have a V twin, with a Jin. bore and 4in. stroke, and should like to know how much clearance I should have between the piston head at top dead centre and the cylinder head for compression. (2.) What horse-power should such an engine develop? The engine has overhead valves, with detachable head.—R.S.

1.) We cannot answer this question, as the actual distance from the piston top to the cylinder head depends entirely on the formation of the head itself and the calve ports. (2.) This also depends on the design, but is probably from 8 to 10 b.h.p.

Two-stroke for Sidecar Work.

I wish to purchase a motor cycle and sidecar outfit, and prefer quietness in running to speed. I am inclined to try a 53 h.p. Scott outfit, but my knowledge is very seanty, so I shall be obliged if you will give me your opinion on the following points: (1.) Is the machine of sound construction? (2.) Will it meet my requirements as regards quietness? (3.) Has it any features that make it unsuitable for a tovice? (4.) Would it be capable of carrying myself and two passengers (combined weight 26 stones) on a tour through the Lake District? (5.) Does it compare favourably with other makes in economical running?-W.H. l and 2.) The Scott motor cycle is xtremely well made, and is one of the nost silent machines on the road. judguarding also is excellent. (3.) as several unconventional features, but here is no reason why it should be un-aitable for a novice. It is quite simple drive and control. (4.) The load you aggest carrying in such a district as the akes is excessive; you really need a lachine of at least 8 h.p. for such ork. At the same time, a similar load ay be taken up a 1 in 7 gradient with imparative ease on a 1919 model. (5.) he oil consumption is reasonably low. ew spare pasts, are needed, as the wear transmission and tyres is small. etrol consumption, with sidecar, aver-jes 50 m.p.g., and fairly high speeds ay be maintained. One improvement hich is recommended in order to secure sy starting in cold weather is the ting of a compression tap in one of the linder heads. A few drops of petrol rough this will ensure an instant start the coldest morning.

Dual Ownership.

In co-operation with a friend,
I am considering the purchase,
use, and maintenance of a sidecar combination, on a sharing
basis. We propose to share,
while the first cost of the outfaind

car communation, on a share, equally, the first cost of the outfit and accessories, running and maintenance costs being borne by the parties in proportion to the mileage run by each of them separately. Owing to the great difference between my friend and myself, in our hours of duty and leisure, we should each be able to have a maximum amount of use of the outfit without causing inconvenience or disappointment to the other. The difficulty seems to be to determine the procedure in the event of one party wishing to dispose of his share, the other being unwilling or unable to buy him out, and a buyer approved by both parties not being available. Can you suggest a plan?—PARTSER.

If you purchase a first-class machine, there should be no difficulty in disposing of it, provided it is kept in a reasonable condition, so that in the event of either you or your partner being unable to buy out the other's half share, it would be quite an easy matter to sell and divide the proceeds. This seems to be the only

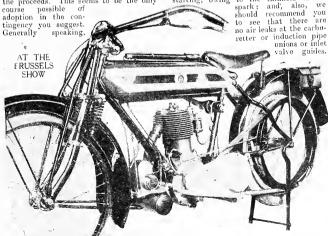

there are several objections to copartnership in such, a vehicle as a motor cycle and sidecar, since different styles of driving may account for faulty runing when in the hands of one of the partners, and the matter of costs would then be somewhat difficult of adjustment.

Difficult Starting.

I have a 1916 6 h.p. Enfleld sidecar outfit, which will not start unless one of the plugs is heated, and it only fires in one eviluder. On one of my cylinders 1 have a plug which fires, no matter what cylinder it is put in—the spark seems to follow this plug. have tried the spark with the plugs on the top of the cylinders and get a fine spark from both plugs; and I have put two new plugs in, and it did not fire at all, although it gets plenty of petrol, as when the non-sparking plug is removed the engine is flooded with petrol. I do not understand it, as all the rest of the engine seems to be all right.—J.C.S.

Probably the plug referred to has a slightly wider gap than the other one. Motor cyclists often set their plug points far too close together, causing difficult starting, owing to the thinness of the

Early Sarolea design greatly influenced general practice in this

To-day the latest model closely follows British lines

READERS' REPLIES.

Generator Trouble.

I notice in a reply to a correspondent, in your issue of Kebruary 12th, who cannot keep his rear lamp alight, that you give three points to observe. I should like to mention a fourth. I suffered from the same trouble until I discovered that the flapping about of loose portions of the gas tubing, due to bumps, has such momentary effect on the gas pressure as frequently to cause the lamp to go out altogether. Since I have had the tubing securely anchored I have had no further trouble.—L. W. 2576.

Rear Lamp Trouble.

I noticed in The Motor Cycle of February 12th a letter from a reader complaining of having trouble with his rear lamp. May I state that I used to experience the same trouble with my rear light. The small burners supplied for these lamps became either choked or the light was jolted out, as the pressure of gas decreased the rear and head lamp working off the same generator. I have now fitted on my rear lamp an ordinary gas tap. To do so I cut a thread on the lamp nozzle, drilled and tapped the cock to suit, and screwed it home, whilst in the other side of the tap is screwed a piece of brass tube, over which the rubber connection pipe slips. I now use a large size burner in the lamp, and regulate the flame by the tap. This has been on my machine for the past seven or eight months, and I have never had any trouble with it.—R.T.

Increased Prices.

From the manufacturers of the Douglas, Wooler, and Levis motor cycles, we have received a notification of an increase in selling prices, necessitated by the increased cost of production.

A Well-known Douglas.

Although built six years ago, a 23 h.p. Douglas, ridden by F. A. R. Zurcher, has won every open hill climb in Natal since the Armistice, and also gained two medals and certificate in the Johannesburg-Durbase race of last year.

Oxy-acetylene Welding.

We understand that Messrs. Lyell, Ltd., Flood Street Engineering Works, Sloane Square, London, S.W.J, who manufacture the "Auto" oxy-acetylene welding plant, are prepared to execute welding repairs of the most difficult nature.

Catalogues Received.

We are in receipt of a folder dealing with the 5-6 h.p. Hazlewood motor cycle and sidear, specifications of both being given. Accompanying the folder is a leaflet giving a sectional view of the gear box and a key of its components.

Electrical Accessories.

Messrs. Ward and Gladstone, Ltd., of Manchester, inform us that they are exhibiting a full range of electrical goods of interest to motor cyclists at the British Industries Fair, to be held at Birmingham, from February 23rd to March 5th

A B.S.A. Development.

The great demand for B.S.A. small tools has decided the manufacturers, The Birmingham Small Arms Co., Ltd., to arrange this department as a separate concern. The new company, which has been registered as the B.S.A. Tools, Ltd., will devote its energies entirely to the production of small tools and engineering tool equipment. Messrs. Button, Griffiths and Co., Ltd., of Ludgate Square, London, E.C., have been appointed sole selling agents for the new commany.

THE PARIS NICE TRIAL.

G. L. sidecar outfits. A machine of this make took part in the English Six Days Trial Observe the height of the handle-Lar.

Magneto Deliveries.

The "M-L" Magneto Syndicate, Ltd., of Coventry, inform us that they are now in a position to give prompt delivery of "M-L" magnetos. Enquiries from motor cyclists and retailers should be addressed to Messrs. S. Smith and Sons (M.A.), Ltd., 179-185, Great Portland Street, W.I.

A Request.

With reference to the disappearing sidecar hood, reviewed in our issue of January 29th, we are asked by the inventor, Mr. G. W. Davis, to state that any correspondence regarding this device should be sent to him at 35, Britannia Road, Norwich, and not to Messrs. Mann, Egerton and Co., Ltd.

Motor Cycle Repairs.

The Mead Cycle Co., Inc., Birmingham, ask us to state that they have considerably extended their motor repair department at 11 and 13, Paradise Street, Liverpool, which is equipped with all the latest appliances, and is under the control of Mr. H. Alban Brayshaw, M.I.M.E., who will give expert advice with regard to tuning and repairing all makes of motor cycles.

Robbialac for Decorative Treatment.

Messrs Jenson and Nicholson, Ltd., Robbialac Works, Stratford, London, E.15, the manufacturers of Robbialac enamel, had a big stand at the Ideal Homes Exhibition, at Olympia, showing the application of Robbialac enamel for interior and exterior house decoration. Various attractive colour schemes for drawing rooms, dining rooms, and bedrooms were exhibited.

A Useful Pocket Diary.

Information of considerable value to all motorists is included in the excellent pocket diary which Messrs. George Spencer, Moulton and Co., Ltd., and Messrs. Wood Milne, Ltd., are issuing. It contains calendars for 1920-1921, some equivalents in popular measurements, an English-French dictionary, lighting up table, hints and tips to motorists, a dictionary of daily wants, and numerous other items of useful information.

A Correction.

In our issue of February 5th we stated that the Landaulet sidecar outfit, illustrated on p. 163, was supplied by Mr. E. W. Ball, the Scott agent for Birmingham. We are now informed that while the motor cycle was supplied by Mr. Ball, the sidecar body was built to the design of Mr. C. G. L. Bowley, of the Cabriolet Sidecar Co., and is a purely experimental model of a type which will shortly be marketed.

An O.K. Dinner.

With the object of overcoming the lack of cohesion which usually exists between the shop and office sides of a manufacturing concern, a staff dinner was held at the Nag's Head, Hockley Heath, or Friday last, at which the works departmental foremen and senior members of the office staff employed by Messys Humphries and Dawes, Ltd., were present. An impromptu concert, which followed, was much appreciated, and further events of this character are to be arranged.

Note & Watch This Space Every Week

When you will see full designs and particulars of the Motor Cycle that caused such a sensation at the last Olympia Show, viz., the

THE

RICHARDSON LIGHT

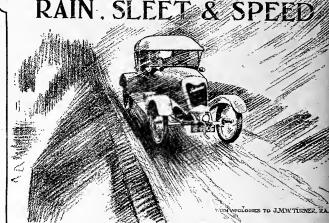

The conditions under which we tested the RICHARDSON were exceptionally bad. A gale of wind, accompanied by rain and sleet, added to the joys of à thoroughly greasy road . . it was not long before we got away (three up), and, once started, one of the first obvious things was the handiness of the gears. As the low gear is only really necessary when starting, we were soon in top, and before long were roaring through mud and rain at nearly 40 m.p.h. In view of the bad weather conditions, we did not prolong the trial, but we were out long enough to satisfy ourselves as to the strength, efficiency, and comfort of the RICHARDSON."—Extract from Light Car and Cycle Car. 20th Dec., 1919.

NOTICE TO THE TRADE.

DELIVERIES—Special efforts have been made lately to speed up deliveries, and already a great improvement is apparent. Owing to the very large number of orders on hand, it is impossible to give delivery by return, and at present a slight delay is unavoidable. Customers are therefore thanked for consideration and indulgence already extended and assured that every possible effort is being made to complete orders on hand in strict rotation of receipt.

NEW SPECIALITIES & ACCESSORIES FOR 1920.

Many new lines are in course of production, and customers should therefore ask for their name to be added to the mailing list for new Calalogues

all Customers kindly note CHANGE OF ADDRESS:

The T.T. Race in Doubt. Sa T.T. Race wanted in 1020? Several well-

known firms have announced their decision not to enter on account of the disorganisation of production which follows special preparations for an important race of this kind. But others are equally keen to compete. In another part of this issue we publish a letter from a well-known firm stating that after considering all points they have decided to race again this year. These conflicting opinions open up a wide field for argument and several important side issues. We quite appreciate the views of those manufacturers who consider that output is the most important factor at the moment, and in this particular we agree with them; but there are a great many potential motor cyclists who are looking to the sporting side of the movement to confirm their decision to enter the ranks, and the Tourist Trophy is the sporting event of the year. Most manufacturers have their order books full and require no more orders this year, but the T.T. is

an event which improves the breed, and much

knowledge has been gained as a result of war

experience, which needs to be put to the test

in a race.

Possibly some of our old-established and more conservative firms are not vet ready to compete with concerns who have started fresh with designs based on modern ideas, but at any rate the T.T., shorn of many of its old time and important adherents, would be an unrepresentative and unsatisfactory event, and the winning machine would be accorded undue prominence. Alternatives have been suggested before now, the most practical of which are a race for amateurs and a race for stock machines. Neither of these schemes is without its difficulties, and yet both have much to recommend them. A third suggestion is an Inter-'Varsity event, which, though it might be interesting, is unlikely to be representative, and would also exclude many sportsmen who desire to compete.

any case, it would be a thousand pities if the 1920 T.T. were abandoned on account of lack of support. If only a limited entry is received, we look forward to a race being held after such a long lapse of time.

Mirrors for Slow Traffic.

TOWADAYS, when it is desirable to speed up all forms of traffic to the highest points consistent with safety, any extraneous causes , of delay should be minimised or eradicated if possible. One of the most common sources of trouble in this respect is slow-moving and bulky traffic travelling in the same direction as the rider. It is hardly reasonable to expect the drivers of such traffic to keep permanently to the side of the road, since road surfaces nowadays are such that it is necessary to pick the best way. At the same time much of the trouble could be avoided if all heavy vehicles carried a good mirror in such a position that a clear view of the road behind could be obtained. Perhaps the worst offenders as regards obstruction are the big chars-à-banc which are frequently met on the roads during the finer months of the year. It is, of course, most difficult to obtain a rearward view from this type of vehicle, especially as a passenger is not infrequently packed in between the driver and the side of the body. The ideal solution of the question is undoubtedly a system of separate roads for highspeed vehicles; but, as the attainment of this ideal is not a likely event for some years to come, we must do our best to arrive at a practical and immediate substitute. The mirror, if properly placed and used, is undoubtedly the simplest scheme, and it is to be hoped that owners of heavy vehicles will make a point of seeing that their fleets are so equipped. Failing this, it is possible that legislation may effect what voluntary service might easily accomplish.

All this is apart from wilful obstruction, which when encountered should be severely punished; but this fortunately is not common.

Occasional Comments by "Txion"

The A.C.U. Pundits on Air v. Water.

O EADERS will remember that the A.C.U. judges rather patronisingly advised the trade to remember water-cooling, and held the Scott up to admiration. I am second to none as a Scott enthusiast-I own one, and I love it. But I regard it as a gourmand regards caviare. It is a delicacy for the fastidious owner. The Food Controller did not put caviare on the menu of his national kitchens, nor should I bill a 'bus with an expensive cooling system and a heavy petrol consumption as the machine for the million. If the A.C.U. judges are right in holding that motor cycles are still slightly under-cooled as a class, the cowl-cum-fan or the Hawley Morgan stunt is a cheaper and simpler method of gingering up cooling than any, water jacket. If we grant the A.C.U. premise, we may reasonably dissent from its conclusion. It is quite a straightforward job to box in a motor cycle cylinder and put a 50 m.p.h. air blast through the box when the machine is slowed down to 10 m.p.h. on Bwlch-y-Groes. wonder how soon we shall see this, and whether we shall be offered a 4,500 m.p.g. oil consumption along with it.

The Imaginative Engineer.

HEN I have saved enough money to start in the motor business, I shall base my staft on two £10,000 a year men. One will be a designer, whom I shall bribe to leave the Rolls-Royce Works. The other will be a poet—Bridges, Yeats, Frankau, or any songster who is prepared to exchange materialistic opulence in Coventry for wooing the Muses in Arcadia. Why a poet, do you ask, gentle reader? There is an ancient adage that evil is wrought by want of thought, as well as by want of heart. I do not think that the sage who first enunci-

ated this truth meant the kind of thoughtlessness led me which recently to chuck a 14in. wrench into my box of spare lamp bulbs. Here is a yarn which enshrines the pith of the maxim. A man paid £200 the other day for a _sidecar combination with detachable wheels. On the very first trip his back tyre picked up some chevaux de frise which a careless

lorry employed by the Disposal Board had dropped of the hard, high road. Giving Araminta a cigarette and box of fondants to play with, he whipped off the spawheel, and approached the back spindle, gaily whis ling the "Conquering Hero." But the mudguard who hinged, and the back wheel consequently could move extricated. Ten minutes later a passer-by mighave seen a motor cyclist with agonised—aye, convulsed—countenance tipping over and propping up 6 cwt. combination in precarious balance on its side car wheel, and using most unchivalrous language a rather peevish flapper who was disdainfully tryito slip a spare wheel into place. Finally, the rid attempted to prop up the monster with one hand, which directed Araminta's amateur tactics with the other crash, gentlemer! It was what a humore catalogue describes as a "combination de luxe."

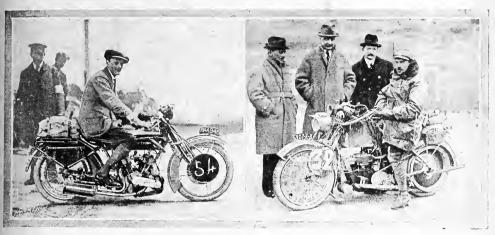

Cycle Car Production.

THEN we mere roadmen gabble glibly about na production of simple passenger machines, generally fail to realise the financial gramme involved. The other day I sampled the pa-of such a vehicle. There are precisely two and half of them in existence, viz., the test chassis, wh has accomplished rather less than a year on the ros the Show chassis, which to the best of my belief I never been run; and a pile of parts sufficient to co struct about half of a third machine. The expendit up to date has reached about £,12,000. The design concerned has fairly grandiose schemes, and ho to manufacture at the rate of fifty cycle cars per we Although the costs are only on a par with those o first-class sidecar combination, he is forced to bud for a capital of £300,000, of which approximat one-third would be used to acquire the necessary sho and plant, whilst the remaining £200,000 would se

as working c tal. Obvious there are- t very large sn in his path. the one hand; is necessary find a capita who believes the chassis st ciently to sta £,300,000 on s ing 2,500 annum. On other hand, t capitalist-whi found-has consider wheth the present to per of labour permit him carry out such

A SUCCESSFUL MORGAN. Driven by Mr. E. Chapman, this runabout gained sixth place in the recent Paris-Nice Trial.

ENGLISH AND FRENCH.

(1) Kaye Don (5-6 h.p. Zenith-Jap), who gained highest marks, and made the best individual performance in the Paris-Nice Trial.

(2) M. Brunet (3½ h.p. twin-cylinder Bleriot, with disc wheels) at the finish of the trial. He was the sole survivor of his team.

programme. There is, of course, another side to the medal. Orders for four years' output are already in hand. The interest on £300,000 at 10% is £30,000. Success would be assured if labour permitted 2,500 cars to be built in the first year, and if the public bought them at a price which allowed a nett profit of £12 per car.

The Champion Wobbler.

WHEN the machine, which I have described as a champion speed-wobbler, arrived at its factory of origin, it was duly tested by a staff expert, who avowed that my strictures on its misconduct were astoundingly mild, but did not commit himself about the causation. The machine was then stripped, and the frame proved to be half an inch out of truth, whilst the ball races in the head were found faulty, apparently owing to errors in hardening. Before long, I hope to reg. It on its steering, and also to let Lieut. Olechnovitch know whether it conforms to his principles as regards the steering axis and centre of gravity.

Good Steering.

HAVE said enough about bad steering in the last twelve months, so let me balance the impression by saying how very beautifully the Scott steers. If Anthony Hope ever writes one of his swashbuckling novels around my district, he will certainly christen it "Greasitania." Since the Armistice I have principally ridden two machines, one of which steered beautifully at high and medium speeds, but was too light at a crawl; whilst the other jigger took two hands all the time, and when the mud was drying round a corner made me wish I had three. By contrast, the Scott can be ridden hands off on decent going at any speed of which it is capable, and one hand feels perfectly safe on ordinary grease, whilst two rob the genuinely formidable surfaces of their usual anxieties.

It is always a testimonial to the steering of a 'bus if you can afford to take a hand off the bar on grease for adjusting purposes. I have known machines with which it was wise to reserve such adjustments for a dry patch of road. Some of our correspondents talk very contemptuously about people who have qualms about their steering, whether at speed or on grease; they would be more merciful if they had to tackle certain layouts' which I could name.

About Air-cooled Cars.

LL motor cyclists are naturally interested in the novel application of air-cooling to engines which are larger than our own, fitted to slower vehicles, and intended to be run with their vehicles stationary more boldly than we dare run our engines under similar conditions. There are now quite a number of these small air-cooled cars either in or approaching the production stage, most of them being well over 1,000 c.c. The best known are the A.B.C., Palladium and H.F.G. flat twins, the C.A.R. threecylinder radial, and the Enfield-Alldays five-cylinder radial. The most interesting facts about these engines are that all except the Palladium are of the o.h.v. type; Dr. Gibson says that an L-headed cylinder transmits approximately 18% more heat per b.h.p. to the cylinder walls than an o.h.v. type, and that all of them rely on forced draught. All these engines employ fans of considerable power, e.g., one of the fans creates a 50 m.p.h. air blast when the engine reaches 2,000 r.p.m., and most of them adopt "cowling," i.e., the air blast is concentrated upon the cylinder walls by aluminium plates, jacketings, or These big engines seem to be doing deflectors. They can climb astonishingly well in road work. all our most ferocious test-hills. They can stand unlimited "blinding" with a following wind. Moreover, a sample tested by our sister journal The Autocar registered an oil consumption of 2,250 m.p.g.

THE 1920 T.T. RACES.

Will They be Held? The A C.U. Secretary's Views.

HE news that several famous firms in the motor cycle world have decided to refrain from entering for the International Tourist Trophy Races, despite the fact that the Manufacturers' Union decided to sanction the support of the event by its members, may make our readers wonder whether the race will be held at all this year. The event is one of so great importance, and has so keen an interest displayed in it, that for weeks beforehand it is the chief topic of discussion in most families in which there is a motor bicycle.

To gather some idea of the actual position, we sought Mr. T. W. Loughborough, the secretary of the Auto Cycle Union, who possesses all the geniality and energy that secretaries are traditionally said to display. We did not beat about the bush, but promptly asked our victim, "Well, will the T.T. Races be held

this year?'

"It is, perhaps, a little early to say," replied Mr. Loughborough. "Personally, I think they will. So far, only one firm, the Triumph Cycle Company, has actually told us that it will not support the T.T., and this fact may induce the smaller makers to come in."

"You think, then, that we may have the races, after all, and you may get a fairly small and easily managed entry, which may result in a sporting and enjoyable race? In our opinion, the 1914 entries were large enough to be unwieldy."

For Private Owners Only?

"Let me see," replied the Secretary, turning to his records, "in 1314 there were 161 entries for the Senior Race, and that entry was, as you say, distinctly unwieldy. You remember 1912, when the trade refused to support the T.T., there were then seventy-four entries (forty-nine Senior and twenty-five Junior), and the result was one of the best races ever held in the Isle of Man. I cannot help thinking that the present enormous demand for motor cycles is an artificial one. Many of the numerous orders firms have received are repeat orders: what I mean by this is that an agent needing, say, three machines, places the order for them to several different firms, in the hope that one may be able to deliver. So the trade may not be so busy as it at first appears.

"Have you," we asked, "thought of running this

year's T.T. for private owners only?"
"This point has not been raised, so far," replied Mr. Loughborough. "Of course, the existing T.T. Races are open to private owners, but we have had no idea at present of catering for the private owner only. In fact, we have already received several trade entries, and among these some from America; and if the Americans enter, I am wondering if the British firms will be content to abstain from racing."

Mr. Loughborough had then to leave to keep an appointment; but he gave us quite a hopeful impression for the future of the 1920 Tourist Trophy Races.

Views of the Trade.

It will be noted that Mr. Loughborough told us that so far he had received intimation from one firm only that it would not compete. There are others who have also decided not to enter, and below we give extracts from letters we have received on the subject. The first letter is from the makers of the A.B.C., who, almost everyone thought, would support the race. Their withdrawal, therefore, came as a surprise and a disappointment.

Sir,-We endorse the views expressed by the Triumph Motor Co., Ltd., in reference to the Tourist Trophy Race. Like them, we have been greatly exercised in our minds as to the course to be adopted in regard to this year's event, and we have, after considerable thought, come to the conclusion that it will be to the general interest of the motor cycling public if we decide, as we have done, not to

enter for this event this year.

This decision has been reached with great reluctance on our part, as we were looking forward to a most sporting our part, as we were obtaing forward to a most sporting event, in addition to which we fully appreciate the value of competitions generally in stimulating the interest and development of motor cycles. The main reason that has led up to this conclusion is that we feel that in view of the multitudinous distractions of one sort or another, practically speaking, since the Armistice, the most important and essential thing to do, both from our own individual point of view as well as that of the industry in general, is to produce.

At the signing of the Armistice the market was, of course, in a state of starvation, after four and a half years of, virtually speaking, no production, and it is in much the same condition now, as owing to the many disturbances in the past fifteen months very little has been done in the industry towards supplying this starved market.

We would like to emphasise here that this does not imply

that we are not going to take an active part in competitions generally for the coming year. On the contrary, but practically all the other competitions do not involve anything like the upset in the factory that this Tonrist Trophy does. THE SOPWITH AVIATION AND ENGINEERING CO., LTD.

Alan R. Fenn, Sales Manager. The B.S.A. Co. has been regarded as another aspirant for T.T. honours, and, to our personal knowledge, a great deal of preparatory work had been done on the T.T. machines. According to the following letter, the moulders' strike is responsible for withdrawal of support.

Sir,-At a recent meeting of the directors of B.S.A. Cycles,

SIT,—At a recent meeting of the directors of B.S.A. Cycles, Ltd., it was decided that the company would not enter any B.S.A. motor cycles for the 1920 Tourist Trophy Race. Owing to the upset caused by the moulders' strike, the works have been considerably disorganised, and full effort will now be concentrated on trying to increase output of standard models.

A Beardmore-Precision in the Junior Race would have been an interesting entrant, but we are

The 1920 T.T. Races .-

advised that the 1920 T.T. will not be contested by a F. E. Baker production.

Sic, -I regret to inform you that it is not the intention of my company to enter for this year's races. This is not on account of any objection to the races themselves, but sheer inability to handle any other problems than those of the reconstruction of our business.

. For F. E. BAKER, LTD. Frank Baker, Director.

Messrs. Humphries and Dawes, the makers of the O.K. motor cycle, blame the moulders' strike.

Sir,—It was orginally our desire and intention to compete in the T.T. this year, and our plans were therefore made accordingly.

We feel, however, that the moulders' strike having affected production so seriously that to devote time and materials to the preparing of machines suitable for the T.T. would be further to retard the ordinary manufacture.

In fairness to our agents, we do not feel justified in doing this, and therefore have decided-much as we should like to

-not to compete this year.

HUMPHRIES AND DAWES, LTD.

The following makers have also written stating that they will not enter for this year's event.

Rudge-Whitworth, Ltd. (present holders of the Senior

Trophy).

Josiah Parkes and Sons, Ltd. (Union).

Calthorpe Motor Cycle Co.

Bayliss, Thomas and Co. (British Excelsior). New Imperial Cycles, Ltd.

Bradbury and Co., Ltd.

London and Midland Motors, Ltd. (Kingsbury).

Enfield Cycle Co., Ltd. (Royal Enfield).

Chater-Lea, Ltd.

Zenith Motors, Ltd. Many have advised us that they have not vet decided whether to enter for the race or not. Among these

may be mentioned:

S. A. Newman, Ltd. (Ivy). D. F. and M. Engineering Co. (Diamond). Butterfields, Ltd. (Leyis).

Wooler Motor Cycle Co. E. A. Radnall and Co. (Radco).

New Hudson, Ltd.

Clyno Engineering Co. Henderson Motors, Ltd. (Sheffield Henderson).

Veloce, Ltd. (Velocette). Quadrant Motors.

Tyler Apparatus Co. (Metro-Tyler).

In the next column we give a letter from the Hendee Mfg. Co., who intend to support the race.

Indians Definite Starters.

Sir,—The Hendee Mig. Co. find themselves in a very similar position to that of the company who intimated that they would not compete in this year's T.T. Race, but not-withstanding that we also, to a great extent, added to our reputation by winning first, second, and third places in the 1911 Tourist Trophy Race, and quite irrespective of any inconvenience we may be put to in preparing machines for the race and sending a certain number of our staff to the Isle of Man during the practice and progress of the race, we feel that we have an obligation to perform in the interests of thousands of riders of Indian motor cycles. We believe that every British motor cyclist is a sportsman, and as such takes a great interest in seeing the motor cycle of his choice prominent in all the classic sporting events, particularly the T.T. Race.
We feel sure that if we were to withdraw from competi-

tions altogether, the name Indian, as applied to motor cycles, would soon become a "back number," and second-hand

Indians would greatly depreciate in value.

Therefore, we consider it advisable, and feel sure that all motor cyclists will uphold our decision, to enter Indian motor cycles in the 1920 race in the Isle of Man.

We can only hope that other manufacturers who have in-timated that they would not support the T.T. Race this year will carefully reconsider the matter and take the same view of the situation that we do.

> HENDEE MFG. Co. W. H. Wells, Manager.

Messrs. Hanwell, of Northampton, the makers of the Cedos motor cycle, the Paragon Motor Mfg. Co., and Cashmore Bros. (Alecto), have also written stating that they will support the race-

Such is the position to day. Quite a number of manufacturers appear to be neutral, and no doubt their decision rests largely upon the attitude of the trade generally. Among these we have the Scott Motor Cycle Co., who have made considerable preparations towards competing, though their previous decisions are likely to be influenced to some degree if a representative entry were not obtained.

The Douglas, Norton, James, A.J.S., Brough, Sunbeam, and several other important firms all have some. fast new T.T. machines. The Ariel, Matchless, Nut, P. and M., Abingdon, Harley-Davidson, American Excelsior, Campion, Omega, Verus, B.A.T., Scale, Hobart, Rex, Duzmo, Martinsyde-Newman, Humber, Royal Ruby, Invicta, Allon, Edmund, Connaught, Blackburne, Coulson, Cleveland, Hazlewood, Ixion, Beaumont, Lea-Francis, L.M.C., Rover, Wilkin, Metric, and Sparkbrook are all possible entrants.

NEW AND IMPROVED MODELS.

Visit to the Motor Cycle Section of the British Industries Fair.

ESPITE the increased prices, compared with those ruling before the war, the public interest in motor cycles is greater than it has ever been, cycles is greater than it has ever been, and demand, both Overseas and at home, considerably exceeds supply. One has only to stop in a city street with a good class outfit to realise that the interest bestowed by the people who gather round is more than curiosity.

Rear portion of the improved A.C. Junior, which now has a two-speed epicyclic gear.

The alert motor cyclist, wherever he goes—in tram, train, or 'bus, in café or theatre-may overhear snatches of conversation concerning motor cycles between people who are potential buyers, but who have not yet owned a machine. There is no doubt that the motor cycle is as yet only in its infancy as regards its scope, and when conditions are more normal, the number of riders will be vastly increased.

Keen Interest Shown.

An example of this interest on the part of the non-motoring public was manifested at the Birmingham Section of the British Industries Fair, where upwards of a hundred manufacturers connected with the industry exhibited their products to buyers from Overseas. We were par-ticularly struck with the fact that buyers interested from a business standpoint in other goods were personally interested in motor cycles. Thus one may regard the British Industries Fair as something more than an exhibition for booking orders. It is an exhibition of British products for the benefit of Overseas visitors. The man who visited this country to buy, say, pumping machinery may be the potential buyer from an Overseas agent of a Britishmade motor cycle, and for this reason motor cycle exhibitors will never have concrete evidence of the good results of

The fact that there were so many exhibitors in the Motor Cycle Section seems to point to an appreciation on the part of the industry of the value of overseas trade. Yet we were told that several "salesmen" had instructions not to accept orders owing to outputs having already been allocated. In these cases the exhibits obviously are arranged for propaganda purposes. In other cases, goods are exhibited which are scarcely suitable for overseas requirements, but, taken generally, no doubt the Fair may be regarded as a success from a business point of view.

Coming, as it has, almost immediately after Olympia, the exhibition had a limited interest to the British motor cyclist, because there were but few new designs in either complete machines or their accessories. But to the overseas visitor there is much that is new, and must make a strong appeal.

Improved Models.

We observe that two more of the supporters of the stand-to-ride type of scooter have succumbed to the popular

demand for seats. New models of the Mobile Pup, with a saddle, and the Autoglider, with a seat, were exhibited. In the former case the seating accommodation is provided by a saddle of the conventional type, otherwise the machine is unaltered; but the new Autoglider, in our opinion, is much refined by the reduction in height of the steering column. The rear wheel is enclosed in a neat case, on the lid of which a comfortable seat is fitted in an ex-

ceedingly neat manner. Beneath this is a compartment for small parcels. Undoubtedly, the scope of the Autoglider which, with its spring frame, is so far the most serious attempt to provide a runabout machine for shopping and such purposes, is considerably increased by these additions. It is now also made as a light delivery vehicle-a development of the seat type passenger machine, with a slightly larger box over the rear wheel. This box has a capacity of three cubic feet, and, in addition, has space on the top of the box for extra parcels. The Skootamota, which is already well known to our readers, is exhibited by Messrs. Gilbert Campling, Ltd., and in-addition to the complete machine an engine was shown in section.

The Macklum scooter, recently described in The Motor Cycle, is also on scribed in The Motor Cycte, is also on view, but the particular model exhibited has a Verus $2\frac{1}{4}$ h.p. engine, in place of the larger Union engine which was fitted on the model we described.

Well-known Exhibits.

Among the many firms exhibiting the Among the many firms exhibiting the same machines as those which appeared at Olympia may be mentioned the A.J.S., Rudge, James, New Hudson, Subbeam, Beardmore - Precision, Saltley - Villiers, Matchless, Bradbury, Royal Enfield, Humber, Sun, and Levis. Engine unit makers are represented by the Villiers and Dalman, while several other manufacturers' goods were to be seen on stands not beaving their years. not bearing their names. Among these we noticed the Hobart and Acme motor cycles, Grindlay, Cooper, and Willowbrook sidecars.

Two new lightweights on conventiona lines—the Federation and the Victory marketed by the Co-operative Society

A new sidecar design by Messrs, Calland and Lee.

and Wineberg and Co., of Birminghar respectively—are also exhibited.

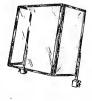

Messrs. Auto-Carriers, Ltd., have in proved their new commercial vehicle which now embodies a two-speed epicyclear. In this machine simplicity has be closely studied. The small four-strooverhead valve engine is built integrated. overnead varie engine is blut the with a short axle casing, containing worm-driven gear between the two st disc wheels. The "chassis" is a single tube and the steering is on the "tur table principle.

New Sidecars.

Several new sidecars made their detat this "show." Among these we notid a smart little sporting model suitafor 3½ h.p. and even smaller machines, is known as the Stanford Classic, it has an adjustable seat. The price is £ Calland Lee, Ltd., of Stalybridge, his count side as with the statement of the statement o

a coupé sidecar with celluloid windo

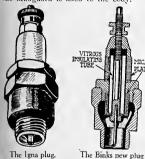

(Left) A new motor cycle signal which costs Zls., manufactured by the Remoline Co., 4, Denman Street, S.E., at 21s.

MOTOR (YCLE

New and Improved Models .-

a new model described as the Luxurette, hinged roof, rear locker, dctachable scat hinged roof, rear locker, detachable seat and back cushion, and a long "prow," imitating the bonnet and radiator of a car. The price of this elaborately equipped attachment is £49 10s., which, naturally, restricts its market; but at more popular prices the makers have several other types from £25 10s. to £31 10s., the latter being a full touring model with detachable seat, large rear locker, and four-point attachment with quickly detachable fittings. In all types the mudguard is fixed to the body.

in section. Burbury and McKenzie sidecars are also shown.

New Accessories.

Sparking plugs are now made in so many types that the advent of a new make or model fails to create the same amount of interest it did a few years ago. Nevertheless, the new model Igna is a nevelty, inasmuch as it is a steatite plug, one of the few produced in this country, and of a type regarded as the nearest approach to ideal before the war put an end to the importation of a famous

plug from Germany.

Another nevelty is the new Binks plug, which carries a twelve months' guarantee. The most interesting features of this plug are its tubular vitreous insulator surrounding the central electrode, and the fact hat the whole insulated body of the plug is readily detachable, as are the mica usulating sections. It is, in fact, quite a novelty in plug construction. Binks three-jet damping carburetters and silencers are also shown. Practically every well-known plug is being exhibited, while, as usual, most makers of lubrication. ing oils are in evidence, as were such

The Forward endless belt, in which the bearing pins are of hardened steel, and remain stationary in the leather pads

known firms as Jos. Lucas, Ltd., J. B. Brooks, Ltd., County Chemical Co., and the Elephant Chemical Co.

Nicholsons, of Newcastle - upon - Tyne, among other specialities, are showing a flexible quick drying black enamel. Surridges, of Lendon, display Holdtite patches and other rubber accessories, and some very neat aluminium sidecar and tail lamps.

Windscreens.

The number of detachable windscreens for sidecars now on the market shows that few sidecars in the future will be seen which are not so equipped. Even

the sporting model must new have a small screen for the protection of the passenger. Easting, Cameo, Raper, and a new three-fold screen marketed by Standford, are among the windscreens which appear to attract a large amount of attention from the Overseas visitors. Tan Sad seats also received their full meed of attention. A new type of seat for motor cycles, distinct from the patterns previously illustrated, is on show. This takes the form of a pan seat suspended on laminated springs fixed on a frame, which is secured to the carrier. Gwyn's meter cycle repair bench is another speciality, which will no doubt find its way abread in large

quantities if the interest shown in it is any criterion. The convenience of this stand, which permits a single person to place a metor cycle in a raised position for repairs or adjustments, should make a strong appeal to manufacturers.

Electrical Equipment.

Messrs. Ward and Goldstone have a very comprehensive exhibit of electric lamps and equipment for motor cycles, as have also Messrs. Greenwood and Batley, Ltd., whose Bi-pol system of accumulator construction considerably increases the scope of electricity for metor cycle lighting. We hope later to go into this system more thoroughly than present space will permit.

Amongst their display of specialities the Forward Co. show a clever link belt primarily designed for fan or dynamo drive. The outer links are of leather joined by what is, to all intents and pur-poses, a series of forward belt fasteners. By this means the rollers move in the inner link and not in the leather.

Much machinery was on view, and the stampings and castings to be seen cannot fail to attract those interested in the manufacturing side.

Altogether, one may say that the meter

LONDON-LAND'S END TRIAL.

Some preliminary details appeared in he issue of the 26th ult. concerning the onden-Land's End trial. Entry forms re new obtainable. The starting point, s previously stated, is the Berkeley trms Hotel, Cranford Bridge, and the tart will take place at midnight. Breakast will be served at Bridgwater, where ne hour will be allowed. The same Launceston.

Gold medals will be awarded to cometitors who are not more than fifteen imutes early or fifteen minutes late at ny point of the journey, while silver edals will be awarded to competitors

who are not more than fifteen minutes early or thirty minutes late at any point on the journey.

Motor bicycles

which are competing for the Jarrott Cup, sidecar ontfits, and three-wheeled cycle cars entered for the other cups offered, will have to make a non-stop run over a fifteen mile section in which Porlock and Lynton Hills are situated. Other competitors, if Porlock Hill is considered by the officials to be not in suitable condition, will be allowed to take the lower road, the gradient of which is not so severe.

Petrol and food stops will be arranged at Cranford Bridge, Marlborough, Bridgwater, Barnstaple, Launceston, Trure.

Entries close by first post on March 13th, and should be sent, together with entry fee (£1 10s. for every class of vehicle permitted in the trial) to the trials hon, sec. for the event, Mr. H. G. Bell, 77, Stapleton Hall Road, Strond

Bell, 77, Stapleton Hall Road, Strond Green, London, N.

The competition is open to members only. Those who are not members of the M.C.C. must apply to the secretary, Mr. Southcomb May, 34, Gower Place, London, W.C. Application forms and entry fees must be received by him not later than March 13th.

OBSTRUCTIVE VEHICLES SHOULD HAVE OBSERVATION MIRRORS! See p ge 256).

REFLECTIONS on the PARIS-NICE TRIAL.

Some Observations upon the Four Days' Trip across France, described in "The Motor Cycle" Last Week.

A N analysis of the results shows that of the sixty-nine competitors who started from Montgeron, twenty-five used sidecars, there were two cycle cars proper and two Morgans, while the rest were solo mounts. Of the forty-five survivors, only one cycle car (a Morgan) arrived to time, while twenty-three sidecars and twenty-two solo machines came through the trial.

H. O. Wood, the famous Scott T.T. rider, who with his brother C. P. and Guy formed the winning team, made a fine performance, and the only fault with his machine at the finish was that the speedometer had worked loose. The other Scotts were also in splendid condition.

Moriss, the sporting driver of the Matchless sidecar outfit, who retired at Fontainebleau, came on to Nice by train. Delauné, the other Matchless driver, came through without trouble, except among the hills round Nantua. Here curious atmospheric conditions caused bad earhuration and overheating; at least that was the explanation given by Mde. Delauné. Possibly inferior petrol, which is rather common, caused the trouble.

On the whole the route was fairly well marked, but the nature of the arrowing was poor, as it was difficult to see which way the arrow pointed. The arrowing failed badly at one place, La Fère, about 50 km. from Marseilles. Here Rutherford, H. O. Wood, and several others temporarily went astray.

The Atlas Garage, Nice, where the machines were stored at the end of the trial, was ideal for the purpose. The scene witnessed after the descent from Mont-Agel was of a kind never witnessed in England. The competitors drove in under their own power and in any order. They had all been riding in a bunch, so after three minutes' exhibition of trick riding the place was full. The effect was curious in the extreme: first, dead silence, the clatter of the exhaust of the first man, then a terrific din, a mass of laughing motor cyclists—twisting, turning, and manœuvring for a place, and then all was quiet once more.

Several of the competitors took part in the two previous Paris-Nice Trials. Of these, Douglas Hawkes, the driver of the A.J.S., was one, and Oblin (6 Enfield se.) was another. The last time we saw the latter was at Evreux on August 3rd, "1914, the day after the French Army mobilised. He was then a D.R. mounted on a Clément and wearing a Zouave's uniform.

The keen desire of the Harley-Davidson riders to carry off the team prize was observant to all, and it must be confessed that they put up a fine performance. French and American riders were in the saddle. Verpault's score was the best of the sideear competitors, and fourth in the general classification. The second passenger machine was the Morgan Run-

about, fitted with water-cooled M.A.G. engine, owned and driven by E. Chapman.

Ridden by Maurice Greenwood, a 1914 Connaught with a 293 c.c. two-stroke. engine, and having an Armstrong threespeed hub gear, made the best performance of the lightweights. Greenwood had the identical machine at Grenoble in 1914 for the International Six Days Trial. His only stops on the Paris-Nice trip were for a puncture and to change a plug—truly a magnificent performance.

Kaye Don is deserving of congratulation upon his top score. His twin Zenith finished in fine order, the J.A.P. engine being still in fine fettle for the La Turbfe hill-climb, and keeping remarkably clean. He used Avon tyres and belt (the latter untouched throughout) and one of the new Amac carburetters.

Motor cyclist protest meetings have now been extended to the Côte d'Azur, for once again the competitors found themselves unable to agree with alleged results. The Continental Daily Mail—which ought to know better—announced, even before the judges had met, that the U.S. had won the great race '(sic), closely followed by the British competitors! Actually an all-British team—the Séott—won comfortably, and the top score was by another British rider and machine, K. Don (Zenith). In the meantime, the British riders had gathered together "to protect their interests, obtain fair play, and credit where it was due."

British motor cyclists thought they knew what potholes were. They didn't—until they arrived in France!

Petrol is obtainable almost everywhere in France at prices approximating to those ruling in this country. It is, how ever, advisable, when touring to carry a spare tin, since, owing to the lack of distribution facilities, there is a scarcity in some country districts, particularly down south.

In the Rhône Valley on the third day of the Paris-Nice Trial, the most difficult stretch on the whole route.

RECOMMENDATIONS FOR NEXT YEAR'S TRIAL.

The Organisation.

Next year it would be better for the whole of the organisation to be undertaken by a responsible sub-committee of the Union Motocycliste de France, with the assistance of the local clubs. The local clubs at the various controls did their work splendidly, but supervision by a responsible body is certainly necessary. The publicity part might well be left in the hands of M. Gaston Sweets, editor of Motoryclisme, who carried out this part remarkably well.

Given a responsible body to draw up the rules, to see that distances are not too long, and that they are correct, next year's Paris-Nice trial should be a far greater success than it was this year, and it is undoubtedly a popular event among British riders.

Over the Alps Another Year.

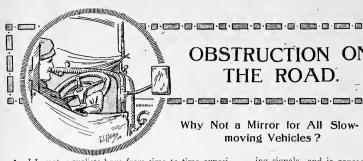

We can quite understand that it was for the sake of la publicité that the competitors were taken through Marseilles, but we think it was really unnecessary to do so. Motor cycles will never be popular where there are bad roads, and as the entrance to and exit from Marseilles resemble the Whitechapel Road or the Black Country, it is not much good torturing riders by making them traverse such abominable surfaces. Far more people in the billy districts, where pedal cycling is too much like hard labour, would be interested in motor cycling than those living in districts where the roads are such that this form of locomotion is a torture instead of a pleasure, consequently why should not the route des Alpes be used next year? It would be far more severe from the competitors' far more severe from the competents point of view—no longer, and far more enjoyable both for competitors and officials. The route would be as before to Lyons, and then via Grenoble, Barcelonette to Nice.

The Time of Year.

There is no doubt whatever, in our opinion, that the Paris-Nice trial was held far too early this year, and it was a great mistake to make it coincide with the pre-Lenten festivities at Nice. This resulted in the most appalling muddle as regards the allotment of rooms and hotels, and accommodation was next to impossible to obtain. Next year the trial should take place in March, when many of the Alpine roads will be free from enow and the hotels will be comparatively free to ac-Next year the trial should take commodate the passing visitors.

NOT AN ACCIDENT. Among the many competitors in the Paris-Nice Trial who had trouble in consequence of the atrocious road surface was Major Empson He had to refit a new rear spring to his AV., the photograph depicting the operation of fitting. He was complimented by many competitors on his plucky and successful completion of the run-

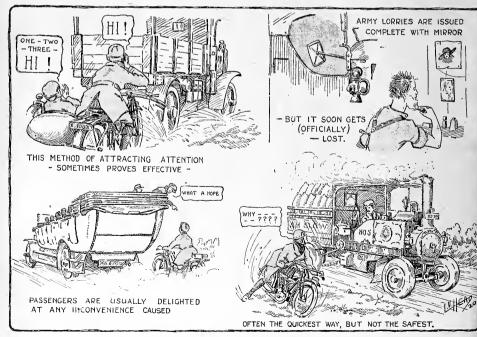

OBSTRUCTION ON THE ROAD.

Why Not a Mirror for All Slowmoving Vehicles?

LL motor cyclists have from time to time experienced considerable trouble when overtaking heavy lorries and chars-à-bancs, especially on narrow and tortuous roads. With this in mind, our sister journals The Autocar and Motor Traction have inaugurated a movement which has as its object the compulsory fitting of mirrors beside the driving seats on all such vehicles.

If this object is achieved, there is no doubt that it will contribute largely to the convenience of all road users, as under present circumstances one may easily find one's self compelled to travel many miles at the rear of a comparatively slow-moving lorry, simply because the driver is unable to hear any normal warning signals, and is consequently unaware that anyon wishes to overtake him.

In many cases the trouble is merely due to the driver of the lorry being unaware of the motor cyclist' presence; but often, we fear, a good deal of de liberate obstruction takes place, and no mirror car correct such road behaviour. This occurs particularly in the case of chars-à-bancs, and anyone who ha toured the famous holiday resorts, such as the Lak-District, Derbyshire, and North Wales, will recollec instances when he has been deliberately held back by some huge vehicle seating thirty or more passengers and cheerfully maintaining its position on the crown o the road, despite the full knowledge of the whole o

Obstruction on the Road .-

its occupants that someone wished to overtake them. We have very strong recollections of tours in the Lake District, which, as far as the main road portions of them are concerned, have been completely spoilt by the attitude of char-à-banc passengers, who mostly travel this way from the densely populated manufacturing districts of South and East Lancashire. It is no uncommon thing, for instance, on the road between Kendal and Windermere, to be deliberately held back, choking in the dust thrown up by one of these monsters of the road, and subject for miles on end to the cheap wit and sarcasm of a crowd of boisterous holiday-makers. Protests of any kind are quite unavailable; and usually the only means of getting forward is to take one's courage in both hands, as it were, ride into the ditch, and at the risk of one's own life endeavour to scrape through, with a vision of the thundering wheels of the vehicle within inches of one's side. Such tactics, however, are almost impossible to the sidecarist on the narrow roads peculiar to districts famous for mountain scenery.

Conductors at the Rear.

If all such vehicles were compulsorily fitted with observation mirrors, there would then be little excuse for the driver being unaware of the presence of overtaking vehicles, and in that case it would be possible to determine more readily whether the obstruction was wittingly or unwittingly caused.

It will be recollected that Army lorries were all squipped with observation mirrors, although it must be admitted that this accessory more often adorned the liver's billet than the bracket provided for its support!

We would support the plea that vehicles above a certain size and weight—and these limits should be made to include chars-à-bane, 3 ton lorries of the W.D. type, and steam waggons with trailers—be compelled by law to carry, in addition to the driver, a conductor at the rear of the vehicle who should be provided with means of communication, such as a bell, as was done on lorries in France:

Advantages to all Concerned.

While such an arrangement would no doubt be unpopular with all concerned with the actual running of heavy road transport vehicles, it would do much to relieve congestion on the roads; and, after all, the adoption of such a scheme is only logical, since it cannot be expected that the driver of a vehicle capable of from twelve to eighteen miles an hour should remain permanently on the near side of the road, as, of course, the difficulty of perpetually correcting the steering, when off the crown or the road, is fully appreciated.

The obvious necessity for drivers of slow-moving vehicles to know what is happening behind needs little or no emphasis. It is to be hoped, therefore, that the commonsense nature of the plea that all slow-moving vehicles be provided with mirrors will appeal to owners of such vehicles. If mirror reflectors are not fitted voluntarily, it is clearly but a matter of time before the authorities compel such a course or one even more stringent.

Mirrors should also be a compulsory fitting on all vans or motors cars, irrespective of their possible, or usual, speed, which, owing to their construction, interfere with the rearward view of their drivers.

Research to Improve the Motor Cycle.

Government Grant to a Motor Cycle and Lightweight Car Research Association.

A.C.U. to be Represented on the Council.

THE motor cycle and cycle car industry is to have a research association of its own. With a view to helping British industries, some three years go the Government granted a sum of one million ounds to assist various research associations in imroving British post-war industries.

The motor industry was given careful consideraon in this respect, and, as some twenty research assoiations dealing with other trades were formed, it was roposed to form one representative body to undertake search into all problems appertaining to the producon of motor vehicles. Certain prominent figures in ne motor cycle world at once saw a vital objection to iis scheme, as car interests have been known to subigate those of the two and three-wheeled motor shicles. They felt that a separate research associaon for motor cycles and cycle cars was absolutely ssential if these types of machines were to be accorded roper scope for improvement. The scheme was remously advanced by Major Watling, the general anager of the Cycle and Motor Cycle Manufacturers' nd Traders' Union, Ltd., and Sir Frank Heath scientific Research Department) was prevailed upon to ke definite action. It was shown that those specially iterested in the evolution of the motor cycle type f vehicle could run a research association of their

own, and, as an outcome of the negotiations, the Government has promised that, if the C. and M.C.M. and T.U., Ltd., will find a minimum income of £3.500 for five years, it would make a grant of a similar amount.

The establishment of such a research association will give motor cycle manufacturers and users a status they have never hitherto possessed, and the official offer was readily accepted.

Individual Motor Cyclists to be Represented.

At a meeting of the General Committee of the A.C.U., held in Southport on the 20th ult., Major Watling said that the British Motor Cycle and Lightweight Car Research Association, as the body has been titled, will be conducted by a council representing every interest tending towards the improvement of motor cycles and their general efficiency under all conditions. The opportunity was presented for the individual motor cyclist to be represented by the Auto-Cycle Union, and it was unanimously decided to appoint members of the Auto-Cycle Union to the Council.

By these means every A.C.U. member would thus have an opportunity of participating in any decisions that were taken.

The Editor does not hold himself responsible for the opinions of his correspondents. All letters must be addressed to the Editor, "The Motor Cycle," Hertford Street, Coveniry, and must be accompanied by the writer's name and address.

BRAKE CONTROL.

Sir,-I should like to say a few words upon the 8 h.p. Sunbeam brake control. At present this machine is fitted with a Bowden wire from the left foot-operated pedal controlling the brake drum on the right-hand side of the machine.

Although this system works fairly well in practice, I think this machine c uld be made as nearly perfect as present-day machines go by using a right foot control and a straight-pull" rod.

Though Bowden wires give excellent service, a simple rod, my opinion, is to be preferred. F. R. ROYSTON. in my opinion, is to be preferred.

ELECTRIC LIGHTING ON MOTOR CYCLES.

Sir,-We have read with interest the article by "W.D.S." in The Motor Cycle of February 12th, and are pleased to note that he recommends solo riders to use dry batteries, but we think that when "W.D.S." states that for sidecar outfits a dry battery is not desirable, he means, and rightly, that the three lamps—head, side, and tail—should not be taken from one battery. The method adopted by us is to have a separate dry battery for each lamp, the dry batteries being of the Volex flat form. The separate units are fitted in a metal container, on which is mounted a switchboard, with connectors, and carried in the bottom of the sidecar.

We are not exaggerating when we state that many thousands of these batteries have been sold for motor cycle lighting, and in actual service they last, according to the method of use, from nine to eighteen months, without the necessity of renewing the batteries.

Of course, the battery can be renewed in a few minutes, and the advantage of this multiple unit system is that, should one of the batteries give out, the lamp illuminated from this battery can he connected in a minute or two to

the terminals of one of the other battery units.

WARD AND GOLDSTONE, LTD. TAXATION.

Sir,-May I add my word to the many protests I see you are receiving re the proposed taxation of motor cycles and sidecars. I am one of the many who have only one day a week on which to take out my wife and family, and cannot substitute another if that is a wet one. I therefore only expect to do 1,000 or 1,500 miles in the season, and should under the proposed changes be paying what the man with means and time to use his cycle often should pay for himself. HAROLD WILLIAMS.

Sir,-I have been greatly interested in the many letters appearing in The Motor Cycle on the question of taxation,

and, so far, the majority seem to favour a tax on fuel.
Writing on this subject in your issue for February 19th,
'Nemo' says, "Petrol consumption indicates mileage."
Now, there is a big variation in the "mileage." which it is Aow, there is a big variation in the "mileage" which it is possible to get per gallon from different machines of practically the same weight and power, e.g., my present machine, a twin two-stroke, will under the best conditions do about 70 m.p.g., whilst my last machine, a big single four-stroke, of rather greater horse-power, would, under like conditions, and these would not be a great difference. do 150-140 m.p.g., and there would not be a great difference in their respective weights. With the above-mentioned machines one rider would pay just about twice as much in tax as the other over the same distance supposing a fuel tax were in force.

correspondents. SINGLE AND TWIN.

This is a point I have not seen mentioned by any of your Carlisle.

Sir,—I am glad to see you assert openly in *The Motor Cy* of February 19th that a fuel tax is the fairest and mo satisfactory method of increasing the revenue. This undoubtedly the case, unless the small mileage man to pay for the large mileage one. By far the va majority of motor cyclists are, like myself, men who cov 2,000 miles per annum and under, and a flat tax according to weight or cubic capacity would be most unfair to small users, who would be compelled to pay while their machinwere lying idle in their sheds.

Further, taxation per machine should be abolished alt gether, and a fuel tax alone substituted. It is absurd think that a scooter or motor-assisted bicycle should pethe same rate as the 8-10 h.p. sidecar outfits and tricars.

Devil's Bridge.

LOW MILEAGE.

Sir,-I have read with great interest the letters published in The Motor Cycle concerning the proposed tax on motor and motor cycles, and am in sympathy with the feeling expressed therein. This tax would be unfair to the majorit of riders. I ride a 4½ h.p. sidecar outfit to and from m work as a carpenter, using sidecar to carry my tool-kit, et

Five thousand miles is stated to be the average mileage per year on a motor cycle. I do not average more that per year on a motor cycle. I do not average more that 1,500 miles per year, and do not ride.100 miles, per year fe pleasure. This proposed tax is putting the last straw of the back of the already heavily-taxed motor cyclist, especially the man who uses this means of locomotion to get this work.

The tax on petrol is, to my mind, the fairest method t adopt, and so make those who use the roads most pay mos Why not make all users of roads help pay for their upkeep and not throw the burden on the unfortunate motorist? Bude.

MOTOR FUEL.

Sir,-Your leading article on the price of petrol is worth of the serious consideration of every motor cyclist. I are a fraid the industry is going to be crippled by the hig price of fuel. Now, when the American exchanges are going against us, it is more than ever desirable that we should import less and produce more. As you say, the best solution is a mixture of benzole and alcohol. This would make an excellent fuel, and incidentally deliver us from the thraldom of the petrol "ring."

The great difficulty, however, in the way of alcohol fur is the conservatism of the Excise authorities, who are jealous of every drop of unduty-paid spirit. But surel this could be overcome, and the mixture rendered sufficiently unpulatable. The mixture of alcohol and benzole could be made on the distillery premises, under the supervision of the content of the supervision of the content of the supervision of the content of th of the serious consideration of every motor cyclist. I ar

unpalatable. The mixture of ancount and tempor made on the distillery premises, under the supervision the Excise officers, much the same as methylated spirit! done at present.

TYRCONNEL.

Donegal.

PLUG TESTERS.

Sir,-Recently I have seen advertised in various moto

wecklies instruments known as plug testers.

I fail to understand how these can actually test whether the plug is sparking, as the advertisements usually give sketch of the instrument with one of its terminals on the plug terminal and the other on the main metal body the plug. As the latter is in contact with the cylinder which are of course an earth return, would not the circu be from plug top, through tester, and to earth via plup plug body, and cylinders, thus missing the points altogether If this is so, there is little advantage, if any, over the old "screwdriver and listening" test.

Camberwell.

PUZZLED MECHANIC.

[The principle of the S.A.B. spark tester recently described in our columns is based on the fact that the resistance of a plug alters according to its condition, whereas that of the tester remains constant. Therefore when testing a plng in good order, the current going through the tester to earth will be full, and the tester will show a deep blue efflorescence in the tube. If a plug is faulty through imperfect insulation or soot, part of the current will be correspondingly weak, or intermittent. In the case of a badly cracked or sooted plug, the whole of the current will follow the easiest path to earth through the plug, and therefore the tester will show no light whatever.—Eb.]

THE MACHINE FOR SPORT.

Sir,-With reference to "T.T.'s" letter regarding the Sir,—with reference to 1.1.s fetter regarding one imachine for sport. I cannot understand him wishing for a machine which must be pushed through traffic and nearly konk out when turning a sharp corner. I have owned three

such machines, and would never ride another.

My present machine is a 1914 three-speed New Hudson, and it surpasses the T.T. machines in acceleration, although its maximum speed is slightly lower. I agree with "T.T. that it is an art in itself to get good acceleration out of a high compression T.T. machine. A very fine art indeed. I should advise him to try a well-tuned single-geared, four-cylinder 5 h.p. F.N. He will then know what terrific acceleration means.

I heartily agree with the writers of the two or three letters recently inserted in your paper regarding the excellent service given by F.N. machines. I owned one for eight years, and during that time the only replacements, excepting years, and during that time the only replacements, excepting tyres, brushes, and plugs, were: One crankshaft, one inlet pipe, four inlet valves, two exhaust valves, and a set of piston tings, yet when I sold the machine in 1919 it was still good for a 6 to 48 m.p.h. which is not so bad for a motor bicycle eleven years old. 'FELIX B. SLADDEN.

Sir,-I have read with interest letters appearing recently In your correspondence columns on the above topic, and am sorry to see that so many sportsmen in the exuberance of their joy for the type of machine of their fancy (or purse) sling mud at other, and probably better, kinds than their own, and of which they have no experience.

I have owned and ridden many types of machines during the past ten years, all purchased and sold through the exclusive medium of your advertisement pages, commencing with a fixed gear Minerva, later riding a fixed gear T.T. Triumph, which was a very good Iriend. I have also owned countershaft three-speeders (the hub gear I would never touch) and have

obtained splendid sport out of all.

My present and best 'bus, however, is a 5-6 h.p Rover with J.A.P. engine, all-enclosed chain drive (Coventry noise-less front and spring link rear), three-speed gear, and hand and foot controlled clutch. With 28 × 3 tyres this machine is easily the finest all-weather mount I have possessed. acceleration and smoothness in running singles are nowhere

in it, and I have finished with them. All-helt drive as on the T.T. machines is an abomination in wet and snow, the latter especially. I have come to a standstill on hills in a snowstorm with belt-slip, so I have finished with belt drive

for good also. Chain-cum-bels is certainly better.

My chains are noiseless, and perfect after 5,000 miles. The drive is as sweet as any belt, and neither rain nor snow touches or affects them. The speed is all that could be desired. It is seldon necessary to use the clutch or gear box when riding solo, the occasions when they arise being invariably to solo, the occasions when they arise being invariably megotiate tricky or dangerous places at a speed in conformity with the safety of others, and, as I write, I think of a steep dip, a head, and a rise of 1 in 6 on a main road, and also a 5 in.p.h. speed limit covering it, which "T.T." in all the glory of his high gear and compression will fail to comply

T.T. machines are good in their way, and provide some really fine sport, but the modern mount can do all that they can and more, and methinks it is chiefly the mystic letters, bars, and skull cap that still attract so blindly the supporters of the antiquated fixed gear machine.

J. H. LEWIS, Lt. R.G.A. (S.R.)

DISSOLVED ACETYLENE.

Sir,-I notice "Ixion's" remarks re dissolved acetylene in your issue of February 12th, and quite agree that the main difficulty with this illuminant is the scarcity of exchange depots. Moreover, the makers of the "D.A." cylinder appear, so far as I can see, to be making no effort to increase their sales with the help of advertising.

to increase their sales with the help of advertising. There is, to my mind, in spite of the high price (I paid £3 15s. for my outfit, by the way, plus about 1s. 6d. for extra tubing—not £5, as stated by "Ixion"), a great future before these cylinders, were the matter tackled in the proper way. In spite of the difficulty in replacing exhausted cylinders, I very much prefer this system of acetylene lighting to the old messy generator. I may add that I have found it, generally speaking more reliable than the I have found it, generally speaking, more reliable than the generator system.

A further difficulty, I may point out—a difficulty which, however, larger sales would no doubt eliminate—is the experience one sometimes has of being supplied with an exchange cylinder that has been in stock a long time and has become partly exhausted.

The cylinder itself is somewhat bulky when fitted to a solo machine, but it fits under the seat of the sidecar without any trouble.

Bradford.

PISTON RINGS.

Sir,-We observe in the January 22nd edition of The Motor Cycle an article on the "Fitting of New Piston Rings." We should like to point out that some of the contentions in that article are onen to criticism.

We do not know quite what is meant in the second paragraph, where it is stated that the radius of the ring in its free position should be nearly a mean between the radius of the ring when slipping over the piston and the radius when the ring when slipping over the piston and the radius wine in position in the cylinder. This statement is indefinite, inasmuch as the radius (of curvature) of a concentric piston ring is a variable quantity from the joint to the back of the ring, both in its free state and when it is sprung

open for the purpose of putting over the piston. The only position when the radius of a concentric ring should be a constant quantity is when it is closed in the cylinder. We take it the closed in the cylinder. intention of the remarks on the radii is to bear out the statement that the stress in the ring when it is put over the piston should be about equal to the stress in the ring when it is closed in the cylinder. This should be so, and the most practical method of ensuring its being so is to make the gap in concentric rings four times the thickness. Space will not allow us to give the proof of this, but we may mention that the whole subject of design of piston rings is under consideration by the British Engineering Standards Associa-tion, Sub-committee "W," to whom

Although the moulders' strike had a decided effect in retarding the output of engines, many firms were quick in getting into their stride again. The photograph shows a group of finished scooter engines manufactured by T. G. John, Ltd.

we have had the pleasure of submitting memoranda on

The statement that the gap in a concentric ring in its free state should be four times the thickness has been endorsed

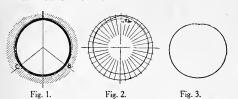

by the sub-committee.

It is stated in the article that the pressure of concentricings on the cylinder walls is not uniform. We may say rings on the cylinder walls is not uniform. there is no ground for such an assertion, neither is it correct to say that eccentric rings give a more uniform pressure. To say that "without question, eccentric rings properly designed, are superior to the concentric type, and should be used, if possible, where an engine is being tuned up for the best possible results," is entirely fallacious. This can be seen from the following argument.

If a concentric piston ring is made by merely cutting a gap out of a circular ring blank, such a ring when fitted in the cylinder takes the form shown in fig. 1. A space obtains between the cylinder and the ring on each side of the joint as far as B and C. The horns of the ring and the points B and C bear hard against the cylinder, while the back of the ring between B and C bears with uniform pressure. (See Dr. Prescott on "Piston Rings," Automobile

Engineer, September, 1919.)

But uniform pressure is required around the whole circum-ference. How is it to be obtained?

The first solution of the problem was attempted by varying the thickness of the ring. The amount of variation can be mathematically derived, as has been done by Dr. Unwin, and the result is shown in fig. 2. To produce rings of this shape is impossible commercially; and, moreover, if they could be produced, such thinness at the joint would allow the gases

produced, such thinness at the joint would allow the gases to pass and defeat the whole object of piston rings.

The commercial eccentric ring is therefore a compromise between fig. 1 and fig. 2, so to speak, and, as may be expected, by no means solves the problem, and leaves much to be desired as regards fitting in the cylinder and giving

The alternative solution to the problem is to vary the radius of curvature of the piston ring when in its free state while retaining even thickness. The correct shape can also be mathematically derived, and is shown in fig. 3. The curve is an involute of the two small waves of the cycloid shown in position in the diagram. (See Dr. Prescott's article.)

Commercially the best way of making concentric rings to conform to this curve is by internal hammering. A fine saw cut only is inserted in the ring, and by means of graduated hammering on the inside of the ring, decreasing from a maximum at the back to a minimum towards the joint. a maximum as the back to a minimum towards the joint, the ring is expanded to the necessary gap and "spring." If properly carried out, the hammering effects a permanent expansion of the ring coincident with the temporary expansion of a perfectly circular ring pulled apart by the points, so, conversely, the result of closing a properly hammered ring is the obtaining of a perfect circle.

Hence, where roundness in the cylinder, uniformity of pressure, and rapid bedding-in are concerned, the internally hammered concentric ring is far superior to the eccentric

ring.

For these reasons, apart from being cheaper to produce and other advantages, the concentric ring is used to-day by all the leading manufacturers, and the eccentric ring is becoming extinct. (The writer knows only of one motor

cycle manufacturing firm using eccentric rings.)
With regard to the width of rings, we are in agreement with the article on the whole. One great disadvantage of narrow rings must not, however, be lost sight of, and that is, due to their not presenting as much wearing surface as wide rings, they wear more rapidly in the cylinder, and the space at the joint is liable to grow to large proportions in a short time. The average practice is to make the width of rings approximately one and a half times the thickness. Rings for car and cycle engines should not, as a rule, be less than square section. Users must not be led too much in the direction of narrow rings by the example of aircraft engines. It should be remembered that the life of a piston

ring on these engines rarely lasted more than a few days.

With regard to the space at the joint to be left in fitting, we recommend this never to exceed one-four hundredth part of the diameter, i.e., .0025d. Rings other than the top one on the piston need not have so much clearance as this. It may be stated that this figure is taken from current practice of motor manufacturers. It is less than half the amount arrived at in the article, possibly because the expansion of the cylinder was not taken into account.

We do not know how the dimensions appearing in the article are arrived at, but we may say that the proposed standards at present under consideration by the British Engineering Standards from 2in. to 6in. as above.

If eccentric rings be made at all they should be made the same thickness at the back as concentric rings of the same diameter, and the amount of eccentricity should not exceed one-fifth the thickness. Under those circumstances, the thickness at the back of both types of rings being the the thickness at the back of both types as a whole, against same they will exert the same pressure, as a whole, against the cylinder wall. We say "as a whole" because the pressure of the eccentric ring will surely vary from point to point round its circumference. No logical reason exists to-day for round its circumference. No logical reason exists to-day for making eccentric rings, however. In the above table the widths have been given to the

nearest convenient fraction of an inch to approximate to one and a half times the thickness, but it should be remembered in determining the width of rings between the limits of one time the thickness and two times the thickness experience is the ruling factor.
THE BRITISH PISTON RING CO., LTD.

WANTED-A LUXURIOUS SIDECAR.

Sir,-I read "Xenos's" letter of the 19th February with sorrow. I thought that amongst ourselves, at any rate, it caused no finger pointing to run one type of motor because others were beyond our means. If he can afford a car, others perhaps cannot, and they make the best of what is possible. I do not run a cycle car because I cannot afford a car, but I run a $2\frac{1}{2}$ h.p. two-stroke because I cannot afford even a cheap combination. I only hope that "Xenos's" friends will not think he runs a "Blank" car because he cannot afford a Rolls-Royce. Would he stop motoring if they did, I wonder? Stockport.

BOOKS AND MAPS FOR MOTOR CYCLE BOOKS AND MAPS FOR MOTOR CYCLISTS.

Issued in conjunction with The Motor Cycle.

"HINTS AND TIPS FOR MOTOR CYCLISTS."
Containing over 400 useful "wrinkles" and helpful bints in regard to motor cycles. Sixth Edition. (Second Reprint.) net. post. 2/3

"TRACING MOTOR CYCLE TROUBLES."
A reliable system for tracing motor cycle faults and
of remedying any trouble when found. Fourth Edition.

21-Edition.

"THE MOTOR CYCLE" ROAD MAPS

England and Wales, Scotland, London (showing
roads into and out of London and avoiding London).

Mounted on linen. Set of three, complete in case,

Obtainable by post (remittance with order) from ILIFFE & SONS Ltd , 20, Tudor Street, London, E.C.4, or of leading Booksellers and Railway Bookstalls.

A selection of questions of general interest received from readers and our replies thereto. All questions should be addressed to the Editor, "The Motor Cycle," 20, Tudor Street, London, E.C.4, and whether intended for publication or not must be accompanied by a slamped addressed envelope for reply. Correspondents are urged to write clearly and on one side of the paper only, numbering each query separately, and keeping a copy for ease of reference. Letters containing legal questions should be marked "Legal" in the left-hand corner of envelope, and should be kept distinct from questions bearing on technical subjects.

Finding the C.C.

I shall be obliged to you if you will kindly tell me (I) how to find the cubic capacity of an engine from the bore and stroke. (2.) I have heard it expressed that the width of a valve seating should not be too great. Why is this so?-ENQUIRER.

(I.) The cubical capacity is found by the following formula: $D^2 \times .7854 \times S$ tollowing formula: D² × .7854 × S × N, when D equals the diameter of the cylinder, S the stroke, and N the number of cylinders. (2.) Because the wider the seating the greater the tendency to cause gas friction. A seating

Electric Lighting.

Having a small 8 volt 3-4 amp. shunt-wound dynamo, I propose to run side, rear, and head lamp off it. I wish to get 30 c.p. at the head lamp, using a 6 volt halfwatt lamp (i.e., consuming 21 amps.). watt lamp (i.e., consuming 2; amps.). (1.) What size accumulator shall I need? (2.) Will it matter if the charging rate? (5.) Shall I need a cut-out, a voltmeter, and ammeter? I have a 40 amp. 4 volt accumulator. Can I connect a low accumulator. Can I connect a low amperage 2 volt accumulator, say 2 volt 10 amp., and, if so, will the accumulators run down together?— R.J.W.L.

You do not say whether your small dynamo is one of the special types made for motor cycle lighting which include some device for regulating the output to compensate for variations in speed, or whether it is just the ordinary shunt-wound machine. We are inclined to think you mean the latter, and, it so, it will not be possible to use it in the manner suggested. The output of a shunt-wound dynamo varies very greatly with the speed at which it is driven, and has to be cearefully regulated for motor work by one of the various methods that have been devised. However, if our assumption is wrong and you have a regulated machine: (I.) A 40 ampère-hour tout accumulator will be the best. Obtain another 40 amp.-hour 2 volt cell and add it to your present accumulator. It would not do to use a 10 amp.-hour cell with the 40 amp-hour. (2.) It will not matter for ordinary use if the charging rate is less than the discharging rate-rather an advantage, in fact. (3.) You will require an automatic cut-out and ammeter. A voltmeter is not necessary, and is often misleading. As an alternative, if your dynamo is an ordinary shuntwound machine, and you could find some

means of driving it, such as a small motor off the town mains, you could make a satisfactory accumulator lighting set by keeping the battery charged at home and putting it on the machine when required.

Motorising a Tricycle.

Will you please recommend to me one or two of the most suitable makes of engine to fit in the frame of my cycle? f require the following points in any engine I buy: (1.) Free engine, for starting by handle or kick-start. (2.) starting by handle or kick-start. (2.)
A range of speed (if possible) from 5
to 25 m.p.h. (3.) Good hill-climbing
capacity. I weigh about 11½ stone.
The tricycle, complete, weighs 59 lb.
Any engine of about 3½ h.p. would do
well, I should say, if of good design
and workmanship.—H.E.B.

It will be quite impossible to fit a 35 h.p. engine in an ordinary cycle frame, and we do not know of any power unit suitable other than usual cycle attachments. Free engine clutch and handle or kick-starting cannot be applied satisfactorily to such small engines, the reserve of power not being sufficient to enable them to take up a load from a standing start.

IMPORTANT DATES.

Mon, March 1st, to Tues, March 16th-Lyons Fair.

Lyons Fair.

Wed., March 3 d—

I. of A.E. Mee'sing at the Institution of
Mechanical Enginee's, Storey's Gate
St. James's Park, S.W.1.

Sat., March 6th— Glasgow Western M.C C., Open Reliability Trial for Pa'mer Trophy.

Fri , April 2nd— M C C. Lond n-Land's End Trial.

Fri. April 2nd-Inter-club Meet at Richmond, Yorks.

Fri., May 21st-M.C.C. London Edinburgh Run.

Tues., June 15th-Junior T.T. Race, Isle of Man.

Thurs. June 17th-Senior T.T. Race, Is'e of Man.

Mon., July 5th. to Sat., July 10th-Scottish Six Days Trial. Wed, and Thurs., July 7th and 8th-Arbuthnot Trophy Trial.

Wed. July 7th—
Union Motocyclist de France et Automo-bile Club de l'Ouest, Grand Prix Race for Motor Cycles and Cycle Cars. Mon., July 12th, and Tues, July 13th-Irish End-to end Trial.

Sun., July 25th, to Aug. 1st -International Six Days Trial in France. Sun., Aug. 1st, to Wed., Aug. 4th-Anglo-Dutch Trial.

Mon., Aug. 23rd, to Sat., Aug. 28th-

Various Adjustments.

I have a single-cylinder 4½ h.p. Precision, and, as I have been troubled with various things, I should be grateful for your advice on the following matters:
(I.) I took my engine down, but find I cannot withdraw the central timing pinion to get off the crank case cover. How can I take it off? (2.) By doing above I, naturally, had to upset valve above 1, naturally, had to upset valve timing. Can you please say how 1 am to retime for speed purposes? (3, What is the exact timing of spark for speed? (4,) I am greatly troubled by the heads being knocked off my exhaust valves. Is there a remedy? (5.) At present I can touch about 20 m.p.h., but on attempting to exceed that speed I find the engine races. Sturmey-Archer hub gear requires cleaning? If so, how can I clean it? The belt has the proper amount of play, so the engine racing is not caused through the belt slipping. (6.) I find about Iii. of my piston, including the bottom ring, has got smashed to pieces, and the fragments were scattered all over the crank case top and inside the crank case, and yet the machine kept running. Could that have the effect of making the engine race, as in query No. 5? (7.) Is my machine capable of taking a sidecar and a pillion rider anywhere?—R.W.

(1.) To remove the central timing wheel from the crankshaft, unscrew the conicalheaded screw in its centre; it should then he possible to lever the pinion off the shaft. (2.) Retime the engine as follows: Rotate the flywheels until the piston reaches the top dead centre of its stroke, and then insert the cams so that the exhaust valve is just closing, and the inlet about to commence to open. Rotate the engine again one complete revolution: the piston will now be at the top of the compression stroke. Retard the ignition control two-thirds, set the contact breaker so that the points are just breaking, and connect the mag-neto drive. (4.) Exhaust valve breakages are due either to overheating of the engine or unsatisfactory material in the valves themselves. You should not experience the former trouble with the timing as given above. (5 and 6.) Apparently the racing of the engine is due to clutch slip. The broken piston would certainly not have anything to do with this. (7.) This engine with three-speed gear should take a sidecar, and also an extra passenger, almost anywhere where the driving wheel can grip.

READER'S REPLY

Alevon Spares.

This may be of use to your correspondent "J.B." The address of the Aleyon Motor Cycle Co. is Courbevoie, Seine, France; they also have show rooms in Paris-Rue de la Grande Armee, I think. I recently obtained a new cylinder and fittings, and quite cheaply, too, so I think they could supply others. - E. W. B.

EXPERIENCES WANTED.

"H.F.H." (Herne Hill).-Paragon two-stroke.

two-stroke.
"C.J.W.T." (Sheringham).—Binks carburetter on T.T. Rudge Multi.
"A.R.K." (St. Leonards).—Dismantl-

ing and adjusting Sturmey hub gears.

RECOMMENDED ROUTE.

BEDFORD TO HARROW.-R.B.

Bedford, Elston, Luton, St. Albans, Watford, Bushey Heath, Wealdstone, Harrow. Approximately 40 miles.

BIRMINGHAM TO EXMOUTH .- O.L.

Birmingham, Bromsgrove, Worcester, Tewkesbury, Gloucester, Bristol, Bridg-water, Taunton, Wellington, Cullompton, Exeter, Exmouth

LONDON TO GLOUCESTER.—F.B.S.

London, Uxbridge, High Wycombe, Stokenchurch, Oxford, Eynsham, Witney, Northleach, Cheltenham, Gloucester.

Ealing to Wivelsfield.—G.F.C. Ealing, Acton, Westminster, Brixton, Streatham, Croydon, Purley, Merstham, Redhill, Earlswood, Balcombe, Haywards Heath, Wivelsfield.

A Popular Lubricant.

We have been informed that, with one exception, the competitors in the Paris-Nice Trial used Castrol oil.

A Useful Diary.

We are in receipt of a neat pocket diary from Messrs. J. Blake and Co., 110-112, Bold Street, Liverpool, which contains much information of interest to the motorist.

A.A. Popularity.

The membership of the Automobile Association has recently passed the 100,000 mark, which is a figure never previously attained by any motoring organisation. Among the new members is H.R.H. the Prince of Wales.

Acetylene Lighting.

In the article entitled "Acetylene Lighting at its Best," which appeared in our issue, dated January 22nd, Mr. R. Creak Davis, the author, who has had a considerable experience of night riding, expressed the opinion that the best method is to light all three lamps of a sidecar outfit from one large generator, with which opinion we agree. Messrs. F.R.S. Lamps, Pershore Street, Bir-mingham, now inform us that they are marketing a new set on these lines, which gives a sustained light for eight consecutive hours with one charge. The price is £8 8s. complete, ready for fixing.

Allon Motor Cycles.

Messrs. Alldays and Onions, Ltd., inform us that they are compelled to increase the prices of their motor cycles, the de luxe model now being priced at £85.

Catalogues Required.

The North London M.C.C. are deirie North London M.C.C. are desirous of forming a library of makers' catalogues for the use of members. Lt, 'A. W. Day, Park Crescent, Finchley, N.3, who has charge of the arrangements, will be pleased to receive lists at the above address.

Petrol-proof Enamels.

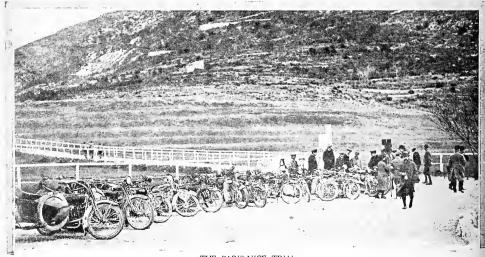

We learn that enamels in gold, black We learn that enamels in gold, black and aluminium are now marketed by Messrs. Balcon and Samuel, Ltd., 35, Paradise Street, Birmingham, who claim that they are quite unaffected by petrol, spirit, acid, or heat up to 250° F. These enamels also dry in a few minutes, and should be of considerable use to motor cyclists.

Leg-guards and Shields for Triumphs.

The combined leg-guards and undershield for Triumph machines, marketed by Forfield Motors, Learnington, which were described in our issue for February 12th, are now known as the Invincible, and the price has been fixed at £4 10s. Messrs. Higgins and Collow, of Coventry, are the designers and manufacturers, and Forfield Motors the sole selling agents.

Increased Prices.

The Tamplin Engineering Co. informs us that it has found it necessary to increase the price of its cycle cars by 10% upon all deliveries on and after February upon all deriveries on and after February 21st. Having made arrangements for trebling the output, the company expects this price-to remain firm until September next. Ariel Works, Ltd., have also in-creased the price of their productions

THE PARIS-NICE TRIAL At the summit of Mont Agel competitors were entertained to tea by the Nice Golf Club. Our photograph shows a group of competing machines outside the golf club house.

Times to Light Lamps

"The Motor Cycle" Spring Number.

On March 25th the issue will be a special Spring Number, greatly enlarged, and containing features of interest to actual and potential motor cyclists.

First Three Entries for the T.T.

D. S. Alexander, H. R. Harveyson, jun., and F. W. Dixon have already entered for the T.T. They will ride Indian Scouts, the machine for which C. B. Franklin (himself a prominent T.T. rider) is responsible. Franklin is now permanently stationed at the Indian factory.

104 m.p.h.

On February 17th, at Dayton Beach, Florida, U.S.A., a motor cyclist uamed Leslie is credited with riding a mile on a Harley-Davidson twin in "54s.39, which equals a speed of 168.4 kilometres (104.6 miles) an hour. This time, if confirmed, beats the record made by Jack Booth, the Anstralian. Leslie rode two miles in Im. 12s.65, five miles in 5m. 2s.32, and a kilometre in 21s.64.

Indians for Sale.

From the Advertisement columns of cars and motor cycles in a big provincial daily paper:

Easter Checkers Required.

Any members of the M.C.C. who would like to assist on the occasion of the Jarrott Cup trial, to be run during the Easter week-end, should communicate with Mr. W. H. Wells, c/o the Hendee Manufacturing Co., Ltd., 366-368, Euston Road, London, N.W.I. A few rooms have been engaged at the Wellington Hotel, Minchead, near one of the most interesting parts of the comrse, in which Porlock and Lynton Hills are situated. Volunteers are required to help at the controls.

Air Service for T.T.

If the T.T. races are held this year, Messrs. J. Blake and Co., the Liverpool motor cycle agents, will inaugurate an aeroplane service between Liverpool and the island for the convenience of the A.C.U., competitors, and manufacturers generally requiring spare parts. No charge will be made. Messrs. Blake have already acquired a three-seater Avro aeroplane for this work and also for the convenience of Mr. J. Graham Reece, M.A.E., the principal of the concern.

THE T.T. AND THE TRADE.

COLMORE CUP IRIAL.

OBSTRUCTION ON THE ROAD.

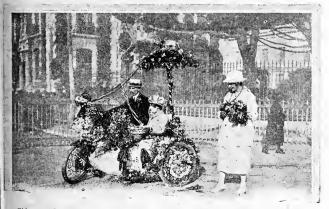

Police Trap.

A police trap is working at Banstead, at nine o'clock on Monday re-rnings, presumably with the idea of catching weekenders. It is worked in two places, from Borough Heath cross toads and from the Wheatsheaf corner. The trap is, of course, worked to catch motorists coming into London.

Second-hand Prices.

The total number of machines offered for sale is about the same, but the prices asked are, in many instances, slightly higher. It is only reasonable to assume that, with the approach of the Easter holidays and the possibility of better weather, the present high prices will be maintained. Delivery of 1920 models is slowly improving, and the prices of these machines is steadily increasing, which fact alone will tend to cause a greater demand for second-hands.

Sidear outfits are not the best of vehicles to decorate tastefully, but this photograph, which was taken during a battle of flowers at Nice, shows that charming effects can be obtained if trouble and care are taken.

A procession of competitors on Sudeley Hill during the Colmore Cup trial last Saturday.

Petrol Prices Petition.

It is desirable that as many petition forms as possible should be in the hands of the A.A. before the 17th inst.

"The Motor Cycle" Index.

Readers wishing to purchase Indexes and Binding Cases for the volume of The Motor Cycle, dating from July to December last, can obtain these from our publishers, Messrs, Iliffe and Sons, Ltd., 20, Tudor Street, London, E.C. The price of the Index is 4d., and the Binding Case 3s. 10d. (post free).

The Colmore Cup.

The trials organising secretary of the Sutton Coldfield and North Birmingham Sutton Coldneid and North Birmingnam A.C. wishes to express his thanks to the Cheltenham M.C.C. for their help on the occasion of the Colmore Cup Trial. Mr. F. Corbett, of Steel's Garage, kindly undertook the arrowing of Gamble's Lane and the hairpin, and also

arranged the luncheon at Cheltenham.

Scottish Trials.

We understand that the Scottish Six Days event will this year be organised by Messrs. Ackman Smith and L. B. C. Cunningham, who have generously and voluntarily offered their services for this purpose. Several new features will be embodied this year. About midway in the trial, competitors will be allowed to change tyres, and every effort is being made to eliminate the element of luck.

Essex M.C. Open Hill-climb.

An open hill-climb will be held on Saturday, the 27th inst., at 2 p.m. sharp. The hill will be chosen and made known to competitors in accordance with regulations, and will be within easy distance of London. In addition to members' events, the following open events will take place: there will also be open classes for machines of 250 c.c., 500 c.c., 750 c.c., and 1,000 c.c.

An Amalgamation Foreshadowed.

We hear a rumour that an amalgamation is about to take place between several firms in the motor cycle trade for the purpose of producing a cheap utility type motor cycle at a price which will enable American competition Overseas to be met. It will be an all-British production

The B.M.C.R.C.

Subject to the necessary repairs being completed in time, Brooklands track will be reopened to the public on Easter Monday, with an interesting programme, under the auspices of the above club.

HAVE YOU SIGNED THE PETROL PRICE PETITION?

The A.A. petition to the Premier protesting against the present prices of petrol is already a huge success, but the larger the number of signatures secured the greater will be the weight of the petition, and we ask every reader, not only to send in his own name, but to secure the signatures of as many motoring friends as possible.

EVERY SIGNATURE COUNTS!

Four sprint races (about three miles) for the following classes of solo motor cycles will be held : Two-strokes, not exceeding 300 c.c., and all types not exceeding 350 c.c., 500 c.c., and 1,000 c.c. In addition, two All-comers' Handicaps (about 84 miles), for solo machines and three-wheelers (including sidecars), will be contested. Mr. Alec Ross is presenting a trophy for men who have served, or are serving, in H.M. forces. Prospective members should communicate with the scoretary of the British Motor Cycle Racing Club, Mr. T. W. Loughborough, The Mill House, Warlingham, Surrey.

A.C.U. NOTES.

Annual Meeting.

The annual general meeting of the Auto-Cycle Union will be held at the First Avenue Hotel, Holborn, London, on Saturday, March 20th, at 3 p.m., and will be open to all members.

Scooter Trial Postponed. .

In view of the present manufacturing difficulties, readers will not be surprised to learn that the A.C.U. has decided again to defer the promotion of the scooter trial.

Important A.C.U. Decision-Advisory Committees to be formed.

As is well known, the A.C.U. exercisescontrol over all open motor cycling competitions in England and Wales. From time to time various alterations are made in the regulations for, and also in the method of, running such competitions, to enable the Union to judge impartially and to legislate as may be required by the general advance of the pastime. The Union has now decided to arrange for the formation of two Advisory Committees, to which points may be referred when necessary. The Cycle and Motor Cycle Manufacturers' and Traders' Union Ltd., is to he asked to nominate five of its members, and the Institution of Automobile Engineers to nominate two of its members, who together will form Advisory Committee A, and the General Committee of the Union will nominate a certain number of licensed competition riders, whether connected with the trade or not, to form Advisory Committee B.

A Tourist Trophy Week.

A gala week in connection with the T.T. Races on June 15th and 17th is heing arranged by the Isle of Man local authorities. Should the races be held this year, the T.T. week would un-doubtedly see the largest number of visitors to the island.

Rising Sun proved the worst hill of the trial. G. Dance (3) Sunbeam sc.) who climbed easily and well

GREASY ROADS CAUSE MANY FAILURES.

A SHORT sporting course, a fine day, an early start, and good organisation. All these helped to make a success of the Sutton Coldfield and North Birmingham A.C.'s Colmore Cup Trial. On arrival at the "George in the Tree" at Berkswell we found a busy scene in progress. A goodly company of cars, official and otherwise, lined both sides of the road. Competitors were husy with hot tea and final adjustments. Club officials seemed to be everywhere, and Messrs. Tom Silver and Alec Ross were preparing to get the men away to time.

A Representative Entry.

The entry comprised almost every well-known make of machine, and amongst the most interesting we noticed that Albert Milner's Diamond was fitted with a steel cylinder and inclined overhead valve gear, the rockers being carried in an aluminium bracket bolted to the cast iron head. Greenwood's single-cylinder Sunbeam and sidecar had the experimental M-L lighting set incorporated with the magneto. R. Monk, who drove the Premier three-wheeler, had the designer as his passenger, and carried a map of the course in a neat metal case with rollers top and bottom, so that the appropriate section with route and times could be turned into position at will. The A.B.C. team—F. A. Applebee, E. A. Colliver, and E. Porter—arrived by train looking very spick and span. The flat twin Harley-Davidson, the Henderson, and N.U.T. machines also attracted much attention. Punctually at eight o'clock, the first competitor, W. B. Gibb, was sent away. This well-known Douglas rider bestrode one of the new sloping top tube 24 h.p. Levis two-strokes.

Trials in the Midlands are confined by lack of hills to two or three well-known routes with, occasionally, slight modifications. The Sutton Coldfield and North

Birmingham Club went straight to the point and took their competitors through Keuilworth, Warwick, and Stratford-on-Avon to the Cotswold range. Up Saint-bury Hill (where the flexibility test was held), round the hairpin bend at the top, and down Willersey, thence to Winch-combe, up Sudeley, and on to the lunch stop at Cheltenham, ria Andoversford and Reclgate. After lunch the features were

SHORT HISTORY OF THE COLMORE CUP TRIAL.

Organised by the Sutton Coldfield and North Birmingham A.C., this competition was first held in 1911, when there were forty-six starters. In 1912-13-14 there were 104, 200, and 244 starters respectively. In the latter event 125 competitors made non-ston runs.

PREVIOUS WINNERS.

1911 .. W. D. South (33 Scott).

1912 .. Frank Smith (5-6 Clyno sc.)

1913 .. W. B. Gibb (23 Douglas).

1914 .. Norman Lea (31 Lea-Francis).

the ascent of Gambles Lane (Rising Sun), the Sudeley hairpin, and the ascent of Willersey Hill.

The course, which was the same as that used for the 1913 Colmore Cup event, is so well known that little arrowing was needed, though all dubious turns were clearly and ethicently marked. As far as Saintbury Hill the course is so flat and easy that there was little of incident to report, though patches of treacherous grease, especially near Mickleton, were sufficiently dangerous to cause the solo riders to exercise caution.

The sky was still overcast as the competitors swung left in Saintbury village to tackle the first hill.

The Acceleration Test.

Saintbury Hill was in very fair condition. True, it was greasy, and, in parts, there was loose metal. The average machine has improved so much since it was last included in a trial that, as a test hill, it could not have occasioned much anxiety; this year, again, the organisers elected to hold a flexibility test on the hill. To our mind the Sutton test on the mil. To our mind the Satton Coldfield A.C. could have found a place more suitable, as the test proved very little regarding the capabilities of the various machines. On the lower part of the hill 100 yards had been measured off, to cover which the competitors had to take about 34 seconds; the end of this slow test marked the beginning of the fast stretch of 100 yards. The difference between the two times was supposed to show the flexibility of the machines, but, as it happened, it merely illustrated the ability of the various drivers. Especially was this the case with the solo riders, who displayed real skill in slow riding and in retaining their seats on accelerating for the fast stretch. In some cases the machines slithered all over the road in the grease, and it is safe to say that the machines which had the greatest accelerative powers depended en-tirely upon the skill of their riders to prove the fact. In this test there were quite a large percentage of failures, due, in most cases, to the state of the road.

F. A. Applebee (A.B.C.) probably gave the star performance in this test from a spectacular point of view. He covered the slow portion at a speed little more than the limit for balancing purposes, and when he accelerated he skidded first to one side of the road and then the other, saving himself from falling by

accelerative powers were prohably lled only by the A.B.C. machines. lled only by the A.B.C. machines, uning sharply to the right at the nit of Saintbury, the competitors taken down Willersey, which ed a difficult descent owing to the ions state of the hill. Thence on inchcombe and Sudeley.

Le descent of Willersey gave the saichance of seeing what they would be surrount at the final test of the

to surmount at the final test of the noon, and it must be confessed that tate of the surface was not encourag-

bb made light of the hill. Watson ne (4 Blackburne) came up steadily. V. Glendinning (8 Blackburne and climbed well, but had considerable I slip; this, however, was common all passenger machines. C. A. eand (4 Harley Davidson) came up power in hand, but the rear cylinder

seems to be rather in the mud. H. Johnson $(3\frac{1}{2},N,U,T_*)$ made a good ascent, as did J. E. Greenwood $(3\frac{1}{2},Sunbeam s..)$, but R. Charlesworth (5 Zenith) got into our R. Charlesworth (5 Zenth) got into a rut and charged the bank. At a second attempt, however, he ascended at a fine speed. F. J. Watson (6.7 Ariel sc.) came up well, and R. M. Brown (4 Norton sc.) made a good steady climb. It was noticeable that he had a box on the carrier, and extra weight in this position is a good plan for any passenger machine when there is plenty of power in hand, as it mitigates wheel slip. W. A. Fell Smith's 7-9 Harley Davidson outfit was missing badly as it passed us, but there was no question of lack of power even under these circumstances. J. C. Walker (23 Edmund-Jap) climbed steadily, but unfortunately skidded and fell near the top of the hill. T. W. Milner (4 Norton) made a good climb, and was followed by

J. N. Roberts (21 Verus), who was

of the Roberts (22 Verlus), who was forced to get off and run.

H. R. Guest (23 Hoskison) made an exceptionally good climb. O. G. Smart (8 Sanbeam sc.) failed to get over the last bit of the hill. Sub-Lieut, Jameson, R.N. (10 Henderson) was badly haulked by Smart, but made a good climb, having plenty of power in hand, as might be expected of a 10 h.p. four-cylinder solo machinė.

There followed a succession of cometitors who mostly made good ascents. petitors who mostly made good ascents. The outstanding features were Albert Milner's o.b.v. Diamond, which has a crisp, clean exhaust note, E. A. Colliver, whose A.B.C. came up at a great speed, Geoffrey Davison (single-geared Coulson), who came up very well, but whose engine appeared to fail quite suddenly just round the last bend, E. Porter (A.B.C.), who like Colliver made a first climb. who, like Colliver, made a fast climb;

The cross gulleys on Rising Sun caused trouble. H. Riley (Enfield sidecar) has just crossed the last and worst of the series.

The Colmore Cup Trial .-

W. Hassall (3½ Norton single-geared); G. Kuhn (2½ Levis), who made a wondertr. Runn (2½ Levis), who made a wonderful climb for such a small machine; J. B. Blake-March (4 Triumph sc.), whose performance was extremely fine; G. W. Walker (3½ Norton single-geared), who was hadly baulked at the top; W. L. Danskin (3½ Rover sc.), steady and good; and F. Porter (2½-Levis). Failures which were more than anything due to the surface included Lt. Evans-Greaves. which were more than anything use to the surface included Lt. Evans-Greaves, R.N. (3½ Lea-Francis). R. E. Pugh (2½ Levis), Stanley Gill (3½ Alecto), C. F. Field (2½ Hoskison), R. C. Chawmer (3½ Sunbeam sc.), and A. E. Mackay (Scale).

Taking the performances as a whole, perhaps the most noticeable points were the sporting climbs of the single-geared

Norton carrier to help obtain wheel grip, J. N. Roberts (Verus) turned right round on the grease, and Riley (8 Enfield sc.) failed owing to repeated front wheel skids Greenwood (3½ Sunbeam sc.) climbed steadily and without undue wheel slip, and Milner (Diamond) made a good perand Milner (Diamond) made a good performance on the lower slopes, as did Jameson (Henderson), Eric Williams (3½ N.U.T.), F. Arbuckle (3½ Humber), Tom Peck (3½ Ariel), E. Newey (Ariel), G. Dance (5½ Sanheam sc.), H. Smytheman (5 Ivy), D. H. Smith (3¾ Scott), R. W. Duke (4 Triumph), J. B. Blake-Marsh (4 Triumph sc.), T. Busby (2½ Verus), whose stand was trailing, L. Sealey (4½ B.S.A.), and G. A. Strange (3½ James). At the top of the hill there were many failures, largely owing to the fact that much wheel taken and the total space available no more than the width of the av

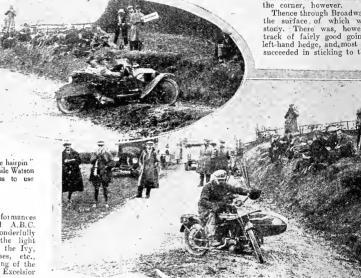

country lane. The driver of the Premier Run smartly used his reverse gear, and smartly used ms reverse gear, and point was debated whether such v be regarded as a stop. L. H. E (6-8 Rex sc.) found his wheelbase was long to get round, so he charged the and simply reversed by running ba

The Competitors' Waterloo.

When such exponents as W. B. (Levis)—to that point prime fave for the trophy—found it necessar put his foot down, it will be apprecent that it required more than average and luck to get round without putt foot to the ground.

Rather more than half the numb starters were successful in negoti

Thence through Broadway to Wille the surface, of which was rough storiy. There was, however, a ne track of fairly good going close the left-hand hedge, and most solo riders succeeded in sticking to this made

Denley cuts "the hairpin" with his Morgan, while Watson (4 Norton sc.) has to use his full lock.

Nortons, the fine performances of the Levis and A.B.C. machines, the wonderfully steady climbs of the light two-strokes, such as the Ivy, Verus. Allon, James, etc., and the steady pulling of the James, Enfield, and Excelsion sidecar outfits.

From Sudeley to Cheltenham the roads were mostly greasy and treacherous, and the two-hour hunch stop proved a welcome rest.

After lunch there were but a few miles to cover before the pièce de résistance— the ascent of Gamble's Lane. A crowd gathered at the top, but, in spite of the fact that the gradient at the foot is not so severe, the greasy surface was so treacherous that the lower slopes were certainly the most trying part for all but the lightweights.

Those who had previously shone mostly retained their reputation, particularly among the smaller machines, which seemed to hold the road in the grease

infinitely better than the heavy brigade. Failures and "footing" on the grease were almost too frequent to mention. Seymour Smith (3 Ivy) had trouble with his gears at the foot of the hill. Charlesworth slid into the ditch repeatedly, but finally got away after receiving assistance. R. M. Brown's passenger leaned over the

slip on the lower stages had unduly heated up the engines. Amongst these were McKeand (4 Harley-Davidson), Glendenning (8 Blackburne sc.), Walker (Edmund), ning (8 Blackburne sc.), Walker (Edmund), Milner (Diamond), Roberts (Verus), Harper (Matchless sc.), Smytheman (Lwy), Monk (Premier three-wheeler), Blake-Marsh (4 Triumph sc.), Busby (Verus), Denley (Morgan), Gill (Alecto), Porter (Levis), Ashley (Connaughi), Nokis (Marloe), Walker (Notton), P. Newman (Lwy), Livum (Levis), Heather (B.S.A. sc.), and Brown (8 Rex sc.).

The Hairpin.

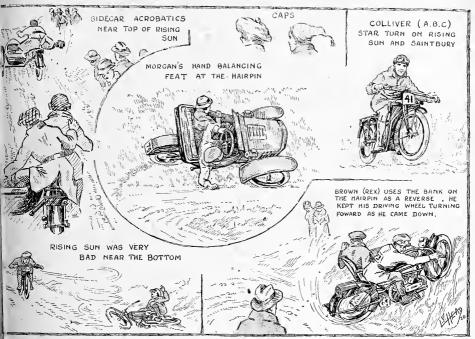

After leaving Rising Sun the route lay along the main road to Winchcombe, from which town arrows directed the competitors into Sudeley Park for the hairpin bend test and back again on to the main road at a point already passed.

The hairpin bend is a very sharp V, formed where two narrow tarm tracks converge. As the course was arranged, a very sharp right-hand turn had to be

ascents. The grease proved too inuc ascents. The grease proved too mu many, and the stones were the Wa of others. Stanley Gill (Alecto) ra side his mount. D. H. Smith (3a fell in the stones. F. W. Ap (B.S.A.) fell. W. Hassall and (Walker, on their single-geared No made very sporting attempts; the far skidded and fell on the very last bal and the latter failed just below him Kuhn made a fine climb, but momentouched the ground with his foot. S. Morgan made a fast ascent, his S. Morgan made a fast ascent, his wheel shooting out stones, but J Denley, had been suffering from a trouble. R. C. Atcherley (4 Triu fell after a phieky struggle. Beed (8 Dot sc.), going well, shave A. W. Thrush (4 Triumph sc.) if failed. D. Heather (B.S.A. sc. If failed, as did L. H. Brown (8 Res. The best climbs which we noted made by P. Newman (3 Ivy), T. tNCIDENTALLY.

A new two-stroke was seen near Willersey. It is said that a well-known firm is experimenting in this direction.

H. J. Willis, who rode a 10 h.p. Reading-Standard (solo), drove consistently, but at the finish he fainted. His first fear on coming round was that he was behind time.

Mr. H. F. S. Morgan emulated his per-formance of 1913 in the Sudeley Park hairpin. He rode up the bank with his left front wheel and saved his machine from turning over by forcing it back to the normal with his hand on the ground. He did not stop.

The modern two-stroke is no longer a toy. Some of the best climbs of the day were accomplished by Levis, Ivy, and Hoskison two-strokes.

THE RICHMOND MEET.

On February 21st representatives of the On February 21st representatives of the York, Barnsley, Hartlepool, Northern, Ilkley, Hull, Wakefield, Linthorpe, and Leeds Clubs, also of the N.E.A.A., A.C.U., and N.M.C.F.U. discussed arrangements for the 1920 meet, which will take place as usual on Good Friday, and it was decided that a prize (probably a cup) will be awarded to the club with the greatest percentage of paid up members present, taking mileage also into account. Competing clubs must ad the hon. assist. sec., Mr. A. K. Proc 28, Gillygate, York, of their total num of paid-up members on or be of paid-up March 27th.

Manufacturers will be asked to s new models to the meet, and prizes. be awarded to the smartest outfit also to the most novel and ingenidea which is incorporated on any mo cycle present.

SUSPENSION OF THE CLYNO BY THE A.C.U.

AST November the A.C.U. suspended the Clyno Engineering Co., Ltd., for a breach of the regulations of the Competitions Committee. We have received the following letter from the company explaining how the misunder-standing which led to their suspension

HE annual meeting of Northern motor cyclists and the rallying of clubs, which takes place at Easter at

Richmond, promises to be even more popular this year than ever.

As the earliest of club rallies, this meeting has always been reported and illustrated in The Motor Cycle, and

although the lack of new models rather

hampered its success in 1919 it was attended as well as could be expected.

arose, and we are glad to note that the matter is now at an end: Sir,-It would appear that considerable misunderstanding seems to have arisen in reference to the Clyno 1,800 miles trial which was advertised in your paper some

The trial in question, as was indicated in the motor cycling press at the time, was undertaken as a result of the C. and M.C.M. and T.U. Ltd.'s decision that no trade representative should compete in the Scottish Six Days Trial.

Exception was taken to the advertisement on the ground that it was a breach of Open Competition Rule No. 107 of the Auto Cycle Union, which prohibits any manufacturer from taking part in any unauthorised trial and obtaining extensive advertisement therefrom. The A.C.U.

requested that the advertisements should be withdrawn at once, and that an ex-planation should appear in the Press.

In view of the fact that this request

was made to a London representative of the company, the matter did not receive serious consideration until official notification was received by the directors in Wolverhampton, when steps were at once taken to meet the A.C.U. to discuss the matter.

In the meantime, the Competitions Committee of the Union had passed a resolution to suspend the Clyno Engineering Co. No reason, however, was publicly stated. On the company objecting to this procedure, and requesting that the question might be fully discussed, every facility was at once granted them, and a representative of the company was enabled to discuss the matter with the Competitions Committee. At this meeting it petitions Committee. At this meeting it was submitted by the company that the use of the word "trial" in the advertisement did not imply that the trial has been officially observed. It was admitted that the Committee were perfectly justi-

fied in interpreting their own rule in sense that it was intended to be re but it was suggested that the rule sho be revised so that no doubt of the in: pretation could arise.

The Chairman then stated that Committee were satisfied that the was sufficiently clear, and that if company were now prepared to ackn ledge that the wording of the adverto believe that it referred to the ac trial, and that the company had th fore-although not knowingly-tr gressed the rules of the Union, then Committee would at once terminate suspension.

We write, therefore, that this understanding as regards the A.C Competition Rules may be explai and would add that in our opinion A.C.U. has not only given every fat for clearing up the misunderstanding, has acted rightly with a view to guarding the interests of the metallic and the control of cycling public.

CLYNO ENGINEERING CO., LT

Bedford and District M.C.C. The date of the next meeting has been altered to March 13th. All members please note.

Motor Cycling Club.

It is desired to emphasise the fact that members who have changed their addresses during the past four years should immediately notify the hou. secretary, Mr. Southcomb May, 34, Gower Place, London, W.C., as to their present

Bath and West of England M.C.

The twenty-four-hour reliability trial to Land's End and back is arranged for to Land's End and back is arranged for the 12th and 13th inst, and is open to motor cycles, sidecar outfits, light cars, and cars. Entry forms will be received by the secretary, Mr. C. B. Newman, 20, Stall Street, Bath, up to the first post' on Monday next.

Inter-club Hill-climb.

The contest between the Ystalvfera M.C.C. and the Neath and District M.C took place on the 21st ult. at a selected hill near Crynant. New Imperial and Douglas machines proved winners in the lightweight class, and the 500 c.c. class was won by a Norton machine, which made fastest time of the day.

CLUB NEWS.

North London M.C.C.

An informal lecture will be given by An informal fecture will be given by Major Dixon Spain, A.C.U., at the Orange Tree Hotel, Friern Barnet, at 7.45 p.m. For the 14th inst. a paperchase has been arranged, and on the 28th inst., a run to Stevenage will take place.

Ealing and District M.C.C.

A feature of the half-day trial for the Longman trophy was the excellent show-ing of the "single soles." True, the True, the winner was Malone on a big twin sidecar; but second, third, and fourth places were won by Tilt, Sharatt, and Boya respec-tively, all mounted on solo Triumplis.

The Public Schools M.C.C.

The opening run will be held on the 20th inst., and all members are desired to attend if possible.

The secretary, Mr. H. A. Browning, Loftus Hotel, Earl's Court, London, S.W.5, will be glad to hear from prospective members.

Rochester, Chatham and District M.C.

On the 7th, 14th, and 21st inst. short runs will be held, starting from the Esplanade at 10 a.m. The opening run to Tunbridge Wells will be held on the 28th inst., starting at 9.45 a.m. Members are requested to make arrangements for their own luncheons.

Launceston and District M.C.

Several sporting events arranged for the future, including a stop run to Truro on Easter Monda speed contest on April 29th, an reliability trial to Exeter and back Whit-Monday. Mr. Maurice Prout, (thorne, Launceston, will be please give any information.

York and District M.C.

A very comprehensive programme been arranged for 1920, including York-Edinburgh-York event, which hoped to hold on August 2nd. On 'Friday the opening run (to Richr Meet) will take place, and all men are earnestly requested to partici Cups have been kindly promised by President, the Palmer Tyre, Ltd.; Mr. C. S. Russell. Besides these medals are also given.

Birmingham M.O.C.

The opening run will take place o The opening run will case place 27th inst., when all motor cyclist invited to attend. Further partic will be announced later. The Victor trial will be held on April 24th, for the premier awards will be the Victor than the Duke cun and a cum for cup, the Duke cup, and a cup for weights, in addition to gold and

Trint Apr. 9.—Edinburgh and District M.C. Reliability Trial Apr. 24.—Luton and S. Beds. A.C. Hill-climb. Apr. 29.—Lunnecston and District M.C. Speed Trial.

New Birmingham Club.

A new club is being formed for the Edgbaston Harborne, and Bearwood districts, and all motor cyclists are invited to attend a meeting which will be held at the King's Head Hotel, Hagley Road, at 7 p.m. to-morrow. The temporary hon. sec., Mr. J. C. Ireland, Connemara, Lordswood Road, Harborne, will be glad to hear from any prospective supporters.

Wellinghorough and District M.C.C.

A new club is being formed, and all prospective members are requested to apply to the hon, sec., Mr. S. A. Light, 14a, Cambridge Street, Wellingborough.

Derby and District M.C.

This club, which is open to owners of motor cycles and light cars, has now been reorganised. The hon, secretary, Mr. L. Farmer, 11, Wheeldon Avenue, Derby, will be glad to furnish all particulars to prospective members.

Edinburga and District M.C.

This club has a very comprehensive programme including several hill-clinus and speed events, in addition to the usual strenuous one day trials. Messrs. McGregor and Cunningham are working out a new formula, which will be re-ceived with interest.

Luton and South Beds. A.C.

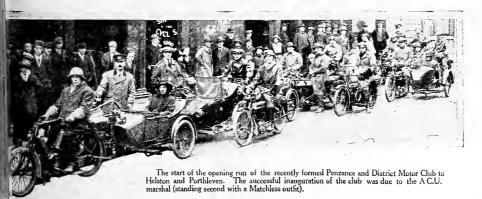

The Club Handbook, which includes an attractive list of events for 1920, and a complete summary of the Club Rules, is now ready. Any interested motorists should communicate with the hon. sec., Mr. G. S. Davison, 16, Bute Street, Luton.

Leeds and District M.C.

Mr. Mitchell's run to Appletreewick took place on the 22nd ult., and was much enjoyed by all participants, including several ladies, who rode solo machines. Members are requested to note that the run on Easter Monday will be to Staxton hill climb, and not to Bridlington, as printed on the fixture

Bedford and District M.C. and L.C.C.

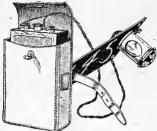

A meeting was held on the 21st ult., when the usual business was transacted. An excellent programme of events is assured, and three Silver Challenge Cups are already promised. It is hoped to have these on view at the next meeting, which will take place on Saturday next, at the Rose Hotel, High Street, Bedford. Local motor cyclists are invited to communicate with the hon, sec., Mr. H. H. Berrie, Goldington, with a view to joining the club.

A HAND ELECTRIC TAIL LAMP.

EVERY development of electric lighting is being watched with the greatest interest by motor cyclists. Even if the tail light only is lighted by electricity a certain amount of trouble is saved, and a particularly neat tail lamp outfit has lately been introduced by Messrs. Vernon Wright and Co., Fulwood House, Holborn, London,

The tail lamp itself is intended to be bolted directly on to the number-plate, on

The Bipol accumulator and tail lamp.

to which it throws a white light, while it displays a red light to the rear. Considerable interest, moreover, is attached to the battery, which is made by the well-known firm of engineers, Messrs. Greenwood and Batley. It is an accumulator known as the Bipol, and is a very excellent substitute for the ordinary dry cell, combined with a much greater capacity. It can also be stored indefinitely, without deterioration, and, when charged, can be kept for three months without fear of loss of current or of sulphatting.

The Bipol accumulator, showing the wooden plate into which the paste is pressed.

The accumulator is unspillable, as the electrolyte is absorbed by means of glass wool. The paste is carried in wood frames, without lead grids, and the complete accumulator is 25% lighter than the ordinary pattern.

compete accuminator is 20% lagree than the ordinary pattern.

The type supplied for a tail lamp is 2 volt 5 ampère hours, and this lights a 2 volt .3 ampère bulb. A set is now made for scooters, with a 4 volt head lamp bulb, and later on complete motor cycle lighting sets will be placed on the market

It is interesting to learn that large quantities of these batteries are being supplied for the hand lamps used by the Metropolitan police.

MOTOR CICLE

A CHEAP FIRE FXIINGUISHER.

IT is not often that a fire extinguisher is required by the average motor cyclist, but when it is required it is wanted badly, and if one is to hand it repays the outlay its in-

stalment has involved. The majority of fire extinguishers are too ex-pensive to receive the consideration of the motor cyclist, who would be prepared to pay up to about half a guinea for such garage equipment. Mr. H. Bullough, of 46, Market Street, Manchester, is marketing the Viper fire extinguisher, which retails at 8s. 6d., and consists of a tube 20in. x 23in., filled with a powder having fire extinguishing proper-ties. We are told that it instantly extinguishes paraffin, petrol, benzole, electrical and other fires that cannot be con-quered by water, but it contains no acids likely to damage fabrics, machinery, or electric wiring. The extinguisher should be suspended from a strong hook in the garage wall.

The Viper fire extinguisher.

AN INGENIOUS MOTOR

CYCLE STEERING LOCK.

THE Dakin steering wheel lock was referred to in our Show Report, but

neans of securing a motor cycle from thett in so far that when it is in use the machine cannot be run or wheeled. A boss, so shaped that it can be conveniently placed against any portion of the steering tube of the frame is sweated on to the tube. Then a hole is drilled

and tapped to take the main lock portion,

which contains a fixed ring on which letters and figures are inscribed, and a

sliding locking pin, from which steel pegs

protrude to engage with slots in the other two lettered rings. This member is then

screwed in position with the lettered rings

in place, and to secure it finally a cap

we have lately been enabled to see the lock in pieces, and are, consequently, able to describe it to our readers. It is quite ingenious, and should be a certain

locking pin. On screwing up the tightly a split ring is forced into a gro inside the main body, with the resthat it is securely locked, rendering impossible to withdraw the lock from head.

It is, of course, also necessary to a the inner tube inside the steering colum IT to lock the steering column it is ne sary to rotate the cap in a clock direction, and then break the comb tion of letters. On the cap being screwed the pin is withdrawn and machine is ready to be driven as but before doing this the owner she again break the combination of lett thus preventing any possibility of the control of the province of the course is sold by Messrs. Herbert Dakin, Ltd., 31-33, High Holt London, W.C.1.

SPARK PLUG TESTER

A N ingenious device designed to a the spark to be actually seen to compression has been patented. The Davis, of Sutton Coldfield, arbeing manufactured and placed on market by Messrs. Davis, Osborn, Clarke, of 46, Hunton Road, Erdin Birmingham.

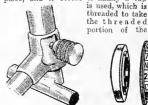

Briefly, the device consists of an c vation window embodied in a T sl fitment which screws into the spa plug hole and receives the plug i

The Davis spark tester.

tested. A mica window is in axial ment with the plug in order that patterns wherein the spark occurs the body of the plug may be a observed. With a short fitnee charge fires every time; but, with one, about every fourth time; the mediate misses, enabling the for character of the spark to be seen.

Made in solid brass and a var heights to suit all engines, the pri been provisionally fixed at 6s. to a according to size and pattern.

The Dakin lock, adapted to a motor cycle head,

WAUCHOPE'S WISDOM.

FE do not claim any superabundance of this all-valuable faculty, but there are a few things we have learnt in the motor business, which learnt in the motor business, which renders dealing with us particularly satisfactory to buyers of motor cycles and light cars. We have, in course of our history, been "up against" many difficulties, arising from a multitude of causes which the average person uninterested in motor manufacturing and distributing organisation knows nothing of. In recent-days, for instance, there have been very abnormal difficulties resulting from the protracted moulders' strike, and the many problems of the change-over of the manufacturing concerns from war to peace production.

cerns from war to peace production.

Wauchope's have always devoted special intelligence to such matters, and the net result is that we can offer every-one requiring a motor cycle or a light car very exceptional advantages. Foresight in placing large contracts for every well-known new machine long before the present difficulties arose en-sures us deliveries which most other firms cannot at present hope for. Our clients, old and new hill rection immediate advantage with the top of the desired production of the present hope for the firm and the will rection mediate advantage of the desired production of the first of the motor cycle or light car of your choice it is Wauchope's reaple are

In these days a great many people are on the lookout for a good second-hand machine. Those who have already dealt with Wauchope's know that our stock of second-hand motor cycles, sidecars, and light cars has always comprised an attentional pages of chains. sidecars, and light cars has always comprised an exceptional range of choice. Even to-day, when second-hand, as well as new machines, are most difficult to obtain, we have ready for immediate delivery a very large stock of motor cycles and cars. Whether your requirements are a sole motor cycle, a sidecar combination, indeeds a constant of the complete of the compl away.

Give us a call at our well-known premises in Shoe Lane, or, if this is inconvenient, write or 'phone your requirements to us without delay, Wauchope's offer you their best atten-tion and exceptional service at all times.

NOTICE TO THE TRADE.

DELIVERIES—Special efforts have been made lately to speed up deliveries, and already a great improvement is apparent. Owing to the very limit of orders on hand, it is impossible to give delivery by return, and at present a slight delay is unavoidable. Customers are therefore thanked for consideration and indulgence already extended and assured that every poss. ble effort is being made to complete orders on hand in strict rotation of receipt.

The Importance of Research Work.

THOUT serious and painstaking scientific research progress is a slow and uncertain process. No one will deny that the great strides made in aviation and other technical subjects during the period of the war were the direct results of concentrating and co-ordinating the brains of the country towards special ends, and proving the results by scientific and practical tests.

The need for research in the automobile, and particularly the motor cycle, industry is most acute at the present time. Owing to the fact that demand so greatly exceeds supply, there is a natural, though unfortunate, tendency to concentrate on existing models, to the entire exclusion of experimental work. This is an extremely short-sighted policy, for, though production is one of the most immediate needs of the country—and no one is more strenuous in its advocacy than ourselves- the time will come when supply will catch up with demand, and buyers will exercise more discrimination.

When this day arrives, we shall find our goods and our knowledge are out of date, and that other countries have got ahead of us. Anyone who is carefully watching the trend of Continental and American designs must recognise the fact that foreign motor cycles are forging ahead quicker than hitherto, and that they are not tied and bound by the pre-war British ideal of a motor cycle. If our motor cycle industry is to continue to lead the way, scientific research is an obvious necessity.

There is so much to be learned about the scientific and metallurgical aspects of motor cycle construction that existing manufacturing difficulties should not be allowed entirely to overshadow future possibilities.

As mentioned in last week's Motor Cycle, the motor cycle and runabout trade is to have a research association, the cost of which is to be shared by the Cycle and Motor Cycle Manufacturers' and Traders' Union and the Government. We foresee important benefits to the motor cycle movement as a result; and, if full advantage of such an association is taken by the trade, then we think posterity will have just cause to thank the Manufacturers' Union for its efforts which have brought such a desirable thing to materialisation.

Sidecar or Runabout.

T the present time there is a decided tendency for newcomers to the motor industry to assail the present position of the sidecar by the introduction of runabout types of vehicles at a similar price. Conservative manufacturers of sidecars appear to think that this is an impossibility, but we are informed by firms who have experimented with both types that, if anything, the runabout costs less to produce than a motor cycle and sidecar. We can well believe this, especially as labour is now the chief factor in costs, because a welldesigned runabout can be so made that the cost of erecting is very much less than the same operations on the sidecar outfit.

Whether the runabout will eventually supplant the sidecar is an extremely doubtful point, and whether it will even endanger the sidecar's popularity depends entirely upon its all-round efficiency. So far, only a few runabouts approximating to the sidecar in initial and running costs have proved to be thoroughly satisfactory, but probably, had as much time and money been spent in developing the low-priced runabout as has been expended on sidecar outfits, the results to-day would have been very different.

It is the ever-increasing cost of sidecar outfits that tempts so many designers to try to evolve a substitute that will provide adequate protection for the driver. So long as machines were under £100, it was perhaps hardly worth while to produce a substitute, but now that de luxe sidecars are listed around the £200 mark, the potentialities are greater.

Chain Spares.

AM wondering if the position about the supply of replacement chains and of spare links for chain repairs has not become so serious that special measures are necessary. It has become almost impossible to obtain so much as a solitary spare link except by some gorgeous stroke of luck. During 1919 I exhausted every possible avenue of supply known to me to replace a pair of worn chains on an elderly machine, but without success. At the present moment I am riding a 1920 machine, which, by reason of its design, perhaps runs rather exceptional risks of being stranded with minor chain troubles; but I do not possess so much as a single spare half link for its transmission, nor do I see the least prospect of being able to obtain one. Daily I face the risks of getting stuck with this machine miles from anywhere; and if I should then be towed into a decent sized town, it would not be likely that I should get going again. I understand that the total chain production at the moment is considerably above the 1913-1914 output, whilst the output of motor cycles is considerably less. If this is so, it appears that the motor cycle manufacturers are being allowed by the chain makers to amass and hoard considerable surplus stocks. Could not arrangements be made for a percentage of these stocks to be released as replacements and for repairs?

Useful Speed.

EW motor cyclists order a machine without discovering what its maximum speed is; and the average salesman finds high speed such a good selling lever that he usually stretches a point or two. By guaranteeing 70 m.p.h. for his Brooklands model Mr. Norton has doubtless acquired many new customers. But, in sober fact, speeds in excess of 50 m.p.h. are rarely attained on the road, and seldom enjoyed. Numerous machines can exceed 50 m.p.h., quite a quantity can touch 60 m.p.h., and a select few can beat 70 m.p.h. But owners do not let engines have their heads, because very great speed is always uncomfortable, even where it is not impossible or dangerous. The real merit of the very fast machine is that it is-or ought to be-extremely comfortable at half or threequarter speed; and this is its attraction for the public. We are gradually getting rid of cant in connection with illegal speeds. It is admitted that the road traffic of these islands ought to be speeded up. A rider, who is gentlemanly by nature, who is an experienced motor cyclist, and who owns a decently-designed machine, can safely keep his speedometer needle at 40 m.p.h. on any straight and semi-deserted main road." Within a few years commercial motors will probably be encouraged to average 30 m.p.h. or more between populated places. So motor cyclists who have a penchant for speed want a machine which can do 35-45 m.p.h. without fuss, without vibration (engine or road), without

steering alarms; and it must be capable of smooth deceleration, gradual or violent, as circumstances mata any time demand. Near my house there are three miles of the fastest going in England, free from police traffic, and houses. I traverse this road frequently but it is very seldom that I take it on full throftle the zenith of enjoyment comes from crossing it to m.p.h. on a machine which can do 65 m.p.h.

The T.T.

AM not in the least surprised that the trade. hardly unanimous on the subject of the 1920 T.I The old firms require neither experience no advertisement. What they want is production. they could double their maximum potential output for 1920, they could sell it; and they are not vast afraid of the inevitable slump, for they mostly posse sufficient "goodwill" to tide them over a far mo awkward period than the industry will enter who supply outstrips demand. The case of the new firr is quite different. They can sell their stuff at the moment, partly because it is new, partly because the is a famine in machines, and partly because some the new stuff is better than some of the old stu But the slump may come before some of the new firm have time to convince the markets that their machindeserve to survive. A sensational showing in the T.' -and this year's T.T. should be a huge draw, held-would go far to establish some of the ne 'buses on a level with the best of the old stuff. quite expect there may be a good deal of intriguing procure the cancellation of the 1920 T.T. I sincere hope it will be held; because I want the new machin to have a fair chance to prove their quality under-t sternest tests of all.

Two Miles of 1 in 4.

THIS phrase is the keynote to Mr. W. R. Broo ing's letter in our issue of January 20th. 'F statements and arguments are accurate-mot cycle engines might be better cooled than they a and aero experience has shown us how to provi supercooling. The A.C.U. report, which Mr. Broc ing supports, called for such supercooling. The tracat issue with the report and with Mr. Brooking, inclined to hold that existing cooling is adequate. I A.C.U. considers that engines should be sufficient cooled to enjoy a week among freak hills., Brooking's ideal is that he shall be able to hold l hand on the cylinder head after climbing two mi of 1 in 4. For once I rather incline towards the tra side of the controversy. Most of my riding is do amongst freak hills, and I do not think that more the one machine I have owned since 1911 has overheate or, if you prefer the term, has been "under-cooled They say the dark places of the earth are full cruelty, and I dare say a few mugs buy dud machin which overheat on ordinary roads under kind usag

ccasional Comments.-

hose which I buy do not overheat, and so I have no ersonal yearning for additional cooling. If superooling is going to increase cost or weight, ordinary nachines built for ordinary users had better stay as ney are. Omitting one duddish engine of a good take, my principal sufferings from overheating since gir have occurred on baby two-strokes-when brand ew-and on friends' cars.

1,000 Miles on Electric Lamps.

ITHIN the last two months I have covered just over 1,000 miles of night driving on electric lamps, the vehicle concerned being a rele car with five lamps. In that period I have done in " five bulbs-all new 1919 stuff-and about ven inches of fuse wire. None of these stoppages ere lengthy or troublesome: so long as you have are bulbs and fuse wire you can absolutely rely on i electric installation to get you home, provided it not old and rickety. I have used this system of thing intermittently for ten years, and, barring cumulator trouble with the primitive sets first inoduced for solo machines, I have only sustained one rious stoppage, which was due to the dynamo bearzs-collapsing after a long mileage. There are ur points to which the unaccustomed user should end:

- i. Keep your cells filled up with acid to the correct level.
- ii. Don't take it for granted that the dynamo is charging; to inspect the ammeter by night a match must usually be struck; on the London-Exeter, carry a flashlamp, and inspect the ammeter once every ten miles.
- iii. Carry a complete set of spare bulbs.
- iv. Carry a spare length of fuse wire.

Contrary to popular supposition, short circuits are remely rare with lighting sets.

Hope for the Little 'Uns.

N the past, lightweight machines have never had a chance to come into their own. My knowledge of them is far from exhaustive, but my stable usually contained at least one example until war broke out. I had two objections to most of them. As a class they were grossly uncomfortable, and many of them were rather uncertain hill-climbers. I know that individual examples have done excellent stunts in the Six Days from time to time; but the standard machine, bought by an amateur and ridden by him in delivery tune, was seldom equal to reproducing the trade form of the Trials. I believe the little fellows now evince a marked advance in general efficiency. High prices have endowed the cheaper machines with a special attraction. The growth of utilitarian motor cycling is bringing in new riders with whom light weight counts for much more than it did amongst the veteran stalwarts.

Dangerous Advice.

IY new machine was accompanied by an extremely exhaustive and praiseworthy "book of the words." Delight at this novelty was tempered with wonder when I perused an audacious suggestion that, if I suspected air leaks in the induction system, I should run the engine inside a closed shed and hold a lighted taper near the joints. I hold my life cheap enough, goodness knows, but an air leak does not drive me so far towards despair that I leave it to the Fates whether I should die by fire or by asphyxiation. On the technical point, I nevertheless confess that I do not know of a really good detective agent for air leaks in the induction system, and I daresay many of our readers would value a counsel which is not absolutely insane. There must be some sound garage tip on the point, and perhaps somebody will pass it along. Personally, I generally put a little flour on the suspected spot, but this not too perfect wrinkle is, naturally, useless when there is any draught about.

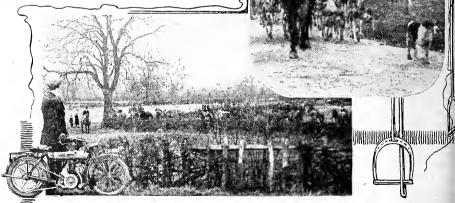

THE "HAIRPIN" IN THE COLMORE CUP TRIAL. W. E. Smith (Triumph sc.) and J. Cooper (32 h.p. Norton) negotiating the bend in Sudeley Park which gave some of the competitors a good deal of trouble.

REAT are the possibilities of the motor cycle, and strange and varied have been the uses to which it has been put. But possibly there is no occasion under which greater circumspection is needed than when it is used to "follow the hounds."

There is a fascination to the country lover in following the fortunes of the field, and if one cannot ride across country and experience the exhilaration of taking the ditches and fences, it is possible, with the aid of the motor cycle, to slip along the by-lanes,

A PLEA FOR THE "WIND-WAGGON."

Some Notes on the Advantages and Disadvantages of Air Propulsion.

By M. A. S. RIACH F.R.Ae.S., etc.

UTOMOBILES are becoming more and more difficult to obtain, and nore and more expensive. At the same time, the problem of road transport bids fair to become each year more insistent. Consequently the attention of engineers is naturally directed 'o other, if less conventional, means of locomotion.

One such presents itself in the realisation of a cheap and elementary form of "wind-waggon." A "wind-waggon" consists of a chassis of the more or less conventional motor car type, in which is incor-

porated a car or motor cycle engine and an air-screw which it drives, directly or through some simple form of reduction gearing.

The advantages of this type of cycle car (such a machine may be roughly classed as such) are immediately evident. They may be roughly classified as follows:

 Cheapness of manufacture.
 Light weight.
 Few working parts, hence rapidity of output. No gear box or differential necessary.

(4.) Power unit can be air-cooled efficiently at all

speeds from rest upwards.

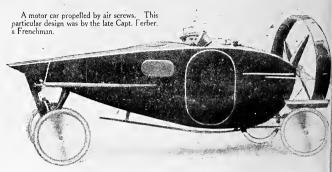

(5.) The equivalent of an infinite number of possible gear ratios, enabling the correct gear ratio to be employed for any gradient, and that entirely automatically.

(6.) As a result of (5) the full power of the engine can be employed whenever necessary, no matter what the gradient may be or other circumstance of the motion.

(7.) Very small wear on tyres.

Best in the Open Country.

There are doubtless other advantages that could be found for this type of automobile. However, all good things have their drawbacks, and the "windwaggon" is no exception. It is not, for instance, suitable for driving in congested traffic, where the draught of its propeller might cause some annovance. although no danger if effectively cowled. draught, whilst exactly analogous to that of the aeroplane propeller, is most acute when the "wind-waggon" is stationary and the engine and propeller running. When once in motion, at any normal speed, this draught would automatically become reduced to quite a small amount, and would be no more troublesome than a light breeze. Even when standing the propeller draught would not be very terrible, although greater in velocity than when the car was in motion. The propeller diameter necessary to secure a reasonably efficient drive would not have to exceed. 5.5y. aft. 6in. This, with a wheel track of 56in., would permit of a suitable guard being attached to protect

the propeller from any possible obstruction. The being no "overhang," all danger to pedestrians, et would be impossible. Whilst for use in towns t "wind-waggon" undoubtedly has its disadvantages, the open country roads it could be used with the sar and in certain cases greater, safety as the conventio type of automobile.

The body of the "wind-waggon" would con: of a shell of three-ply or other suitable material, which the driver would sit. The chassis would vin ally be composed of four idle wheels and the us simple type of springs and frame, all of which co be made very light. There being no transmiss To the road wheel other than the air, all stresses wo naturally be very much smaller than in a motor carl the same weight, which in turn means less weight I round. This type of vehicle is not new, having ban used in France before the war, and also in this count

Some Disadvantages.

There are perhaps one or two further disadvantals peculiar to "wind-waggons," such as possible diraisers, and also on account of the noise of the revol ing air screw. At the same time it must not be gotten that the "radius of action" of the air scw is a small one, considered as a dust-raiser, being fined by a circle having a diameter approximaly the same as that of the air screw. As regards no it is improbable that this would be sufficiently gut to be audible above the noise peculiar to the enge itself. It is probable that any noise due to the ir screw revolving would make itself apparent as a slit " hum."

Head Winds.

Apart from all personal and individual-considations, the only real objection that can be offered the "wind-waggon" lies in its vulnerability to a hid wind of sufficient velocity. Without denying sh vulnerability, two modifying conditions may be not tioned. In the first place, really bad head was are not often encountered in this country—at w rate inland; and when a gale is blowing at a sufficint velocity to be capable of seriously affecting the eth velocity of aeroplanes, it is felt on the main road at

A Plea for the "Wind-wargon,"-

ground level considerably reduced in velocity. ther, there is likely to be, on the average, the same number of tail, as head, winds in the course of a year's road travel, which naturally would augment the ordinary normal velocity of a "wind-waggon," so that, if sometimes the air-propelled car is compelled to reduce speed in the teeth of a high wind, at other times it is equally capable of taking every advantage of a strong "tail" wind in its favour, and so verily to coast before the wind.

Of course, the conventional type of motor car is by no means entirely immune from the effect of a strong head wind, but it has an advantage in this respect over

the " wind-waggon,"

Suppose an ordinary motor car is capable of a velocity of, say, fifty miles an hour on a level road in calm air. Then, at this velocity, it is overcoming two principal resistances to motion: (1) Ground or frictional resistance, and (2) wind resistance. Now. (1)

An experimenta, wind-propelled light car built by the Beacon

Engineering Co.

is practically a constant quantity at all road velocities, whilst (2) varies approximately as the road velocity squared (since the car is supposed to be travelling in still air). The sum of (1) and multiplied. by the car's road velocity, is then a measure of the power output of the car's engine.

Consider, secondly, the case of the same car

travelling against a head wind of twenty miles an hour velocity. Suppose that the car is only travelling at thirty miles an hour over the road. Then (1) and (2) are the same as in the first case, because (1) is independent of road velocity, and (2) is dependent only ipon relative air velocity, which in both cases is the ame. Thus the total resistance to motion is, in both asses, the same. Call this resistance R lb. Then in he first case the horse-power absorbed in driving the

ar at 50 m.p.h. will be $\frac{R \times 50}{375}$, and in the second

ase it will be $\frac{R \times 30}{375}$, so that there is evidently in ne second case less power being used up in driving the ar than in the first case: that is, the engine is deeloping less power than in the first case considered. lence it is evident that, for equal engine power outits in both cases, the car will attain a velocity excess of 30 m.p.h. in the second case. Then the lative velocity between the air and the car will be *eater than 50 m.p.h. in the second case, and hence e wind resistance will be greater than in the first se: that is, the total resistance will be greater in e second case. Thus the road velocity will be less an 50 m.p.h., and greater than 30 m.p.h., the

balance being made up in resistance by what is lost in velocity. Thus, for a constant power output, the road speed of a car should be greater than the difference between its "still air" speed and the speed of a head wind. An analogous case presents itself when travelling in a motor car uphill on a gear below top. It may be asked what bearing the toregoing has upon the case of a "wind-waggon" encountering a head wind. It has a very definite bearing upon it. Since the only real difference between the "wind-waggon" and the conventional motor car lies in the method of final transmission (the air screw) adopted in the former case, it becomes necessary to compare the working efficiency of the air screw driven vehicle with the motor car under all conditions of travel, one of the most important being the effect of a head wind.

Comparisons.

For running in still air, the efficiency of the "windwaggon" should compare favourably with that of the

motor car; and in the case of a following wind the "windwaggon " has an advantage in the matter of speed. It is only in the case of a head wind that its efficiency as a road vehicle compares unfavourably with the

The reason lies in the medium adopted for transmitting the engine power to the car. Since, in the

motor car.

"wind-waggon" system of transmission this is effected by means of an air propeller or air screw, it is evident that anything in the nature of a strong head wind will considerably curtail its efficiency as a system of transmission, with the result that a falling-off in road speed must result greater in magnitude than in the case of the motor car under the same conditions.

The real difficulty lies in the fact that, whereas in the motor car moving against a head wind, advantage may be taken of the fact that (by employing a changespeed gear) the force driving the car may be increased to balance the increased air resistance. In the case of the air screw driven car, the relative air velocity definitely limits the performance of the air screw to a particular road speed, and it is difficult to see how this feature of this particular transmission can be avoided.

In conclusion, it is hoped that the foregoing short notes may perhaps arouse some interest in the "windwaggon" type of road car: a type which possesses many advantages over the conventional type

The author considers that a future lies before the "wind-waggon" as a cheap and reliable form of motor car, unless smothered at birth by the "mentality" of the borough councils. It should also have its colonial uses.

PETROL AT 2s. 101d.---WHY NOT?

The Sub-committee, appointed under the Profiteering Act to Investigate the Price of Petrol, lind Present Charges "Grossly Excessive."

'(THE charge of 3s. 84d. a gallon for petrol is grossly excessive.'' Such is the result in a nutshell of the investigations of a Sub-committee appointed under the Profiteering Act to

investigate the present price of petrol. It is suggested by the Committee that the following prices would be fair to

user and producer alike :

			Pres	ent rate	١.
		s. d.		s. d.	
No. 1 petrol		2 101		3 81/2	
No. 2 petrol	۸.	2 8		3 61	
Benzole .		2 8		3 1	
		1 17 2	C	ta ta Ad	1

A limitation of retailers' profits to 4d. per gallon is also declared to be a fair rate. At the present time the control of the world's motor fuel supply is in the hands of two enormously powerful combines. This, the Committee state (as has been pointed out by The Motor Cycle and The Autocar for several years past), constitutes so dangerous a power if it happens to be improperly used that it is imperative that the Governments of the world should

give some attention to it. "In view of the world-wide operations of these trusts," it is added, "it does not appear possible for the British Government to deal effectively with the

problem.' The Committee found that present high prices for motor fuel are mainly due to a demand which is tending to outstrip the world's present supply, and that advantage is being taken of this tendency to raise prices.'

Dealing with the cost of production, the Committee say, "We are satisfied that petrol sold at £23 per ton satished that petrol sold at \$250 per ton of 300 gallons, f.o.b. New York, reveals a grossly excessive profit," and proceed to state that, according to a high authority in the petroleum trade, the average cost should not exceed £7 10s.

It is pointed out that the greater bulk of the protein leaded in this country.

of the petrol landed in this country is produced by American, Dutch, or Mexican companies, which are outside the control of the British Government, and that the whole question of the production, price, and distribution of motor fuel is one which should engage the attention

of the League of Nations, or otherwise be made the subject of international agreement between the Governments of the principal importing nations, with a view to co-operation in fixing at a fair level the price chargeable for so vital a necessity of modern industrial life.

Reference is made to the fact that the British Government holds a controlling interest in the Anglo-Persian Co., with the suggestion that steps should be taken by the Government to ensure that the products are sold at a reasonable price in this country without reference to excess. sive prices ruling in other fields. In 1922. when existing contracts expire, it will be in the power of H.M. Government to give protection to British users of petrol.

Cost of Transportation.

The Committee report that the cost of transportation could not exceed £5 per ransportation could not exceed 25 per ton (4d. per gallon), even at Gulf ports. Six months ago freights were quoted nominally at £4 5s. per ton; to-day £10 is the figure, and in isolated cases in excess of this amount. The recent advance to 5s. 84d, in the price of petrol is, according to public announcements, based on the increase in freight, and the Committee make it extremely clear that, in their opinion, the nominal market price of freight, if it be in excess of £5 a ton, should not be taken as any justification for raising the price of petrol.
Sir Marcus Samuel, who is head of

the Shell Group, in an interview with The Daily Mail, said that the italicised statement given above "is simply the most extraordinary piece of stupidity ever seen." "The Committee," he said, "have made themselves the laughing stock of the world. As it any committee can fix the price of an article where the changes are not weekly, but day by day, on these three principal things: cost,

rate of exchange, and freight."
Reverting to the report, we find that the Committee recommend, in view of the fact that petrol is stored here on the average for well over three months before it is sold, the retail price be fixed by the Government for periods of three months.

Benzole.

As regards the price of benzole, the Committee find that the price has been regulated by the National Benzole Assoregulated by the National Benzole Asso-ciation simply to conform with the price of petrol, and is not based on the cost of production. The rise of 4d. per gallon which took place on January 1st this year, it is added, "is probably due partly to the fact that the Anglo-American O Co. have secured a large refinery in Yorkshire, and are competing with the National Benzole Association to secur crude benzole.

crude benzole.

A MINIATURE OPEN FRAME BI-CAR.

N interesting machine is in course of construction in Keighley by Messrs. Lister and Co., of that town, who aim to produce a miniature bi-car on lines which are quite unconventional. The designers intend to steer the machine by the rear wheel.

It will be seen from the illustrations of a model of the machine that the whole of the power plant, with tanks and front shield, form a unit, which may be re-moved. The specification will include 24in. \times 3in. 4yres, steel disc wheels, and $2\frac{1}{4}$ gallon tank. No forks are fitted to the rear wheel, which is well guarded, and the nature of the stong mechanism is not clear. The fra tubular, completely encircling the soul wheel. It forms the supporting meders of a wide platform, and is turned bu form a loop over the rear wheel.

A PETROL DENSIMETER.

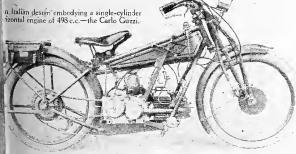

SIMPLE little instrument for determining the density of motor spirit, which should appeal to motor clists who are anxious to obtain the

hest results from their machines, has been devised by Mr. Arthur Smith, 61, Church- Road, Higher Tran-mere, Birkenhead. The Cosser densimeter consists of a glass float, the stem of which is provided with a graduated scale When placed in a glass jar filled with spirit, the position at which the surface of the thuid intersects the scale denotes the specific gravity of the fuel. If the broad red line is above the surface of the petrol, it signifies that it is too dense to give good results, whilst the lower the densimeter sinks into the spirit the better the quality. In cold weather the red line marked "winter," and in mild weather the coloured line marked "summer," should not be above the surface of the petrol. By the frequent use of this little contrivance much useful ine Cosser formation as to varying grades nsimeter of spirit may be obtained.

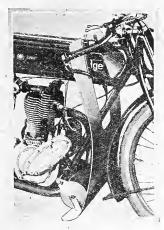

ETAILS of a motor cycle of original design, a photograph of which is reproduced below, has been sent to from Italy.

he engine has a bore and stroke of (82 mm (498 c.c.), its single cylinis horizontal, and it has overhead es operated by an overhead canshaft. ignition is by two plugs and a relli double-spark magneto. A SIMPLE MUDSHIELD.

A NEAT splashguard and leg shield, which is formed from a single sheet of aluminium, was recently shown to us. It was fitted to a Rudge-Multi, and the netal was bent round underment

A leg-guard of simple construction designed for Rudge machines.

the silencer, and secured to the nuts of the latter with suitable brackets.

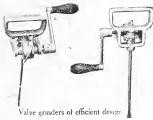

-To allow a cooling draught to reach the cylinder, a space is cut out rather wider and deeper than the tank. A piece of rubber tubing is slit and inserted between the edge of the aluminium sheet and the tank to prevent rattle and damage to the tank.

Such a fitting can be cut out of the sheet metal by almost anyone, and the cost is almost trivial.

A NEW VALVE GRINDER.

THE laborious operation of "grinding in" valves is rendered extremely simple by the use of the efficient little tool invented by Mr. Davis, of Sutton Coldfield. The tendency to cause ovality of, or grooves in. the valve or

sent is obviated, and the work is autonatically done with the skill of an expert. By rotating a handle continuously in one direction the valve has imparted to it an oscillating movement, but the backward movement is smaller than the forward, so that the valve progresses forward. This movement is obtained in an ingenious manner by means of a worm meshing with a toothed wheel, the worm consisting of right and left-hand portions of could pitch, but with an additional

right hand section to give the progressive movement. The frame is intended to enable the operator to maintain a downward pressure, and to resist the torque of the spindle. Enquiries should be addressed to Messrs. Heaton Ward, Ltd., Cliveland Street, Birmingham.

THE LM. SPARKING PLUG

PRACTICALLY ever since we have motored, we have had experience with the L.M. sparking plugs, now handled by G. H. Smith, 12. Mortimer Street, London, W.1, and manufactured in Great Britain.

It is an interesting fact that while a few years ago porcelain was the most satisfactory material known for sparking plugs, at the present time other insthating materials, such as steatite and mica, are frequently employed, but Messrs. Macquare, Ltd., have stuck to porcelain,

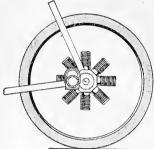

and certainly their porcelain is remarkably successful. Even so far back as the old days of the air-cooled Lagonda tricar, when the L.M. plug was famous for its bright blue porcelain insulator, these plugs used to stand the heat of the engine to a remarkable degree.

The modern plug is of the single-point variety, with heavy electrodes, and should be eminently satisfactory for use in air-cool-1 engines.

ONSIEUR. A. Weidknecht of Paris or sextremely ambitions. Utterly discarding the conventional, he propounds a rotary-engined motor bicycle. Not content with this innovation, he locates his engine inside the rear wheel, which is probably the best location for an engine of this type; but must bring him up with a bump against the ancient difficulties with which the Singer Co. struggled in the days of their motor wheel, which include inaccessibility, spoke breakages, and road vibration, all raised to the nth power. Finally, as the cog-

No. 129,303, Weidknecht's radial engine. 15 7, 17.

noscenti will gather from the sketch which depicts an even number of cylinders, he departs from the standard combustion cycle. Having recovered my breath which was taken away by his audacity, I proceed to notice the details of the mechanism.

The wheel spindle is fixed in the rear fork ends, and forms the (stationary) orankshaft. Two circular side plates

form the cheeks of the crank case, carry the cylinders and wheel spokes, and are formed with cups at their centres, riding on ball bearings on the crankshaft.

Alternate cylinders are used for compression and power strokes. The carburetter is fixed on the chain stays, and a sleeve connection transfers the mixture to inlet pipes communicating via inlet valves with the compression cylinders, into which the mixture is drawn, and wherein it is compressed in the normal fashion. After compression the mixture passed through another valve into an ex

plosion chamber situated above the head of the compression cylinder, and is fired. Upon explosion the charge does not expand downwards into the combustion pand downwards into the combistion cylindey, since the intermediate valve is now shut; but the gas, still under ex-plosion pressure, passes through yet an-other valve into a "reservoir," whence other valve into a "reservoir," whence it travels via a conduit and yet another valve to a "driving" cylinder. When the piston in this "driving" cylinder is halfway down on its stroke, a fresh charge of gas under explosion pressure arrives from the "reservoir," so that a steady pressure is maintained on the driving piston. According to M. Weidknecht, resulting smoothness is comparable to a steam engine. Surely an excellent mount for a beginner!

Spring Footboards.

Many riders prefer footboards to foot-rests, but complain that a fixed footboard conveys vibration and obstructs access to various items of the machine. Mr. F. E. Steer's design is free from such objections, and has the further merit of being cheap to make. The footboard is freely pivoted at the forward point of attachment, so that it can be swung up when the rider wishes to adjust any mechanism; when the board is dropped into riding position, the free end of a cantilever spring, bolted to its under-side, rests against a cross arm fixed to the bearer bolt. A ratchet adjustment permits the angle of the board and the action of the spring to be reset to please individual tastes.

· Front-driven Three-wheeler.

M. A. A. H. Tisserant has certainly evolved a novel tricar, which, in outline, roughly resembles the well-known Phanomobile type, though the details are widely different. An enormous spring fork

gear. The fork is actuated through wheel and inclined steering column. the steering head is mounted a flat to

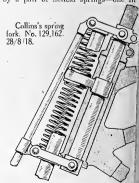

spindle by a conventional crown and be

Tisserant's three-wheeler. No. 1,745. 23/1/19.

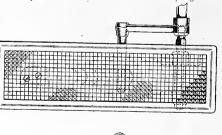

air-cooled engine set across the take \dot{a} (a A.B.C., and provided with a urbox of the sliding type. One end of he layshaft carries a beyel pinion, by well the drive is transmitted to the verial propeller-shaft enclosed in the stern column. The fore peak of the chass is a large section vertical tube, forming he steering head.

Another Spring Fork.

Mr. Osborn Collins protects a spug fork, of which the wheel-carrying poon is hinged by side links to a pair of tional side steering columns, and insu ed by a pair of helical springs—one in m-

pression and the other in tension. fork is strong, but is novel only s a combination of items previously em ved separately by other designers.

cial interest lies in the fact that a er plate is fitted in the transfer sage to give rapid access to the valve, ilst the sparking plug is located right the path of the entering gases and I away from the exhaust port.

Rear Springing.

The type of rear springing shown in the accompanying electch has certain obvious merits. Wide hearings are provided to ensure lateral algidity in cornering. The fittings are by no means heavy, and the belt tension is not unduly varied. The system is patented by Mr. F. A. Coulson, and consists, as shown, of carrying the rear wheel spindle in a pair of short arms pivoted in what would normally be the rear fork ends. The swing of the arms is limited by a pair of quarter

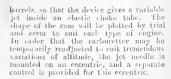

Coulson's suspension. No. 129,214.

elliptic springs, the thick ends of which are held in brackets fixed to the chain stays, whilst the thin ends are shackled to swing links on the spindle-carrying arms. This is by no means a bad method of insulating the rear frame of a light machine.

A Venturi Carburetter.

Mr. C. G. Pullin is busily patenting inventions which smell of aeronautics, but I know that motor cycling has not lost its charms for this fine rider. His latest is an ingenious carbureter. It is floatless, but the flow of petrol may be controlled on cars and bicycles by a valve opened by cylinder suction. Its top spots are as follows: The main bore is variable over wide limits by using the space between two rotatable barrels as the suction tube, the jet being located in the centre of the gap between them. The drawing shows these barrels in two positions, a venturi effect being given in all positions; the barrels are controlled by the "throttle" lever. Furthermore, the chrice is varied by means of a needle, which needle is controlled by the cam operating the throttle

Twist Grip Controls.

Individual tastes are equally rabid in favour of the radial control levers beloved by British designers and the twist grip preferred by American engineers. Mr. Geo. H. Rogers has patented a twist grip, which is sufficiently explained by the sketch. It is obvious that for a very small expenditure this grip could be sub-

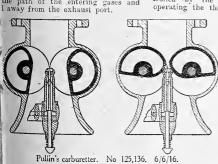

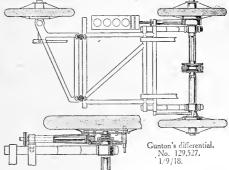

Rogers's twist grip. No. 14,234.

stituted for radial levers on existing machines; and it occurs to me that manufacturers with a largo output could easily give their clients a choice between the two systems by adopting some such design as Mr. Rogers's patent for their twist grip option. Both systems employ Bowden wires of approximately the same length, and I should not be surprised to learn that the manufacturing cost of the Rogers system is less than that of a fixed grip, plus a radial lever. The inventor does not deal with the problem of actuating two controls from one grip.

The Design of Three-wheelers.

The three-wheeler tends to grow more complex, and Mr. F. W. Gunton is of the opinion that it is desirable to fit differential axles to such chassis. His design is of the sidecar type in ground plan, with a four-cylinder engine and shaft drive. The tail pinion of the propeller-shaft meshes with a crown wheel mounted on the exterior of the off side axle sleeve. Both axle sleeves are rotatably mounted in roller bearings at their outer ends. Planetary bevels inside the central bulge of the axle convey the drive to the usual internal pair of half axles, which are, of course, rotatably mounted inside the sleeves.

HILL-CLIMBING ON LIGHTWEIGHTS.

Driving Methods which are Conducive to the Successful Negotiation of Steep Gradients and Treacherous Surfaces.

WNERS of under-powered lightweights who wish to attain the summits of abnormally steep hills will find two methods open to them. The first is to leave the machine below and walk up, and the second is to go round by the easier road which is invariably to be found on a twenty-mile detour, according to Bartholemew.

But those aspiring souls, however, who are determined to essay the climb at all costs, there are certain precautions to be taken. It must be remembered that on single figure gradients the miniature machine is likely to be called upon to give its maximum power for a considerable time.

Cooling and Lubrication.

To do this, efficient cooling must be maintained, and, before commencing a long climb, it is advisable to allow the engine to cool down. The internal parts of most engines partially depend for cooling upon the oil supply, and this, while adequate, should not be excessive. One of the surest causes of failure on a hill is over-lubrication, which increases the internal resistance in the engine, tends to soot the plugs, and also, on two-stroke machines, seriously upsets

the mixture. Carburation also requires considerable attention if the best results are required. Over-rich mixture must be avoided, and the best settings are usually obtained with low level and large jet.

While it is important to maintain a good speed when climbing with a low-powered machine, excessive speed is not advisable if the surface is bad or greasy. Under these conditions the attention should be devoted to choice of the firm parts of road, so that no power by wasted in wheel slip. No notice should be bestowed upon the remarks of casual observers, whether appreciative or derogatory, since a momentary side glanc may result in a skid which will end in the hedge-side.

Such a *contretemps* may not matter very much i willing hands are there to assist in retrieving rider an machine, and helping the restart, but if help is no given there is no alternative but to descend and sta again.

The Revs. that Count.

It is false pride which induces riders to hang of to top gear unduly. Revs. are the life and soul miniature engines. The low gear should always engaged before the engine commences to labour, a the throttle should be set so that the engine runs a speed which, while not great, will always leasufficient in hand for a lightning acceleration emergency.

WHARFEDALE.

A PRESSED STEEL FORK.

WE have recently been afforded the opportunity of examining a new form fork which, owing to its elver construction and sound design, should appeal to motor cycle manufacturers. As will be seen from the illustrations, the fork sides are composed of two steel pressings, formed to fit together in such a manner as to give maximum strength. The web between the two tubular portions consists of four thicknesses of 20g, steel. A special and advantageous feature is the adoption of adjustable plain coned bearings for the link pins, which method gives great lateral rigidity. In proof of this, a machine

SOME COULSON-B. IM-PROVEMENTS,

HE popular little spring frame 23 h.p. Coulsen B. motor cycle has one or two small inprovements added ch will greatly enhance its value to rider. The first of these is a new and emely simple form of stand, which is ged- on the rear stay which supports the boards and, passes through the engine

The new method of carrying the gear box,

cradle. When out of use it is kept in position by means of a strong spring attached to the base of the gear box casting. On its cross member is a short flat piece of steel, to which a leather pad is attached, so that when the stand is out of use no rattle takes place. Normally, the front wheel is kept off the ground, but in the event of it being found necessary to repair the rear tyre, the withdrawable spindle is taken ont, and the wheel removed. The front wheel

The improved chain case on the Coulson B.

then drops to the ground, leaving the machine in position for easily replacing the back wheel.

Some modification has also been made in the method of attaching the gear box, which is now held on a slotted plate, the forward end of which is held by the bott securing the front end of the chain stays, while the rear end is attached to a cross stay running across the chain stays. By this means the gear box can be ensily removed or adjusted, and owing to the slot in the plate registering with the square casting on the top of the gear box, alignment is always maintained.

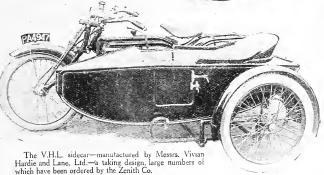

The change speed lever is now placed well forward against the tank, in order to be quite clear of the rider's legs, while the front brake has been discarded and two band brakes fitted, one on each side of the rear wheel.

Another detail addition is a spring stand

Many of these improvements are due to the ingenuity of Mr. H. Guy, the new works manager of the F. Aslett Coulson Engineering Co., who has had considerable experience with Scott and Sunbeam motor bicycles. Coulson-B. motor cycles are now fitted with a well-made and well-equipped tool kit.

THE RAY TWO-STROKE.

A New Single-cylinder Two-stroke Machine of 331 c.c.

NEW large single-cylinder . twostroke motor cycle has been recently placed on the market by the Ray Motor Co., 49, Brick Street, Piccadilly, London, W.1, fitted with an engine having a bore and stroke of 75×75 mm. (331 c.c.), which is rated at 3 b.h.p.

It is not the object of the manufacturers to produce a machine bristling with advanced features in design, but to offer to the public a well finished and reliable article at a reasonable price. A great fault with two-stroke engines is the in-efficient scavenging of the cylinder. The design of the Ray unit greatly facilitates the dispersal of the exhaust gases by the use of twin exhaust pipes, which allow the gases to pass into an unobstructed silencer of a capacity considerably greater than that of the cylinder. In this design there is no possibility of any detrimental back pressure.

A very useful improvement consisting of a circular plug which may be removed for inspection or cleaning purposes is incorporated in the transfer passage. A large diameter outside flywheel is used,

Attractive Specification.

The C.A.V. magneto and the new single-lever Amac carburetter are fitted as standard.

Conventional chain-cum-belt transmission has been adopted with a Burman two-speed gear box and clutch. present Saxon spring forks are used, but it is hoped to replace these by a new fork, made in a one-piece steel stamping, of the manufacturer's own design.

The top tube slopes in order to give a low riding position, and the appearance of the whole machine is attractive.

The petrol capacity is one and a half gallons and the oil capacity one quart.

The Ray engine unit. Observe the twin

The machine thus has a consider: e range.

The Ray Motor Co. are also placing a the market a 2½ h.p. two-stroke m 2 (70 × 70 mm.). The magneto fitter of (70 × 70 mm.). The magneto fitted this machine is driven direct from main shaft, and is located at the sid of the crank case. Both big end and ring bearings are fitted with roller bearings. The gear box is a Roc two-speed, and le transmission is chain-cum-belt. On of these machines successfully followed he Colmore Cup Trial on the 29th ultin

A two-stroke 331 c.c. marketed by the Ray Motor Co.

A SIMPLE MOTOR CYCLE DYNAMO.

VERY modern car is equipped with a dynamo lighting set, and it may not be long before the motor cycle will be considered incomplete without electric lighting equipment. At the present time, however, the cost of the generator rather limits the fitting of dynamo lighting, as, undoubtedly, owners of moderately priced machines hesitate before investing in what

is at present regarded as a luxury.

Mr. Douglas Holt, of 9, Little Turnstile,
Holborn, W.C.1, has introduced a modified

M.I.R.A. dynamo at a moderate price, and, from particulars before us, it is a rather attractive instrument.

It is practically a miniature edition of the M.I.R.A. car generator which has been on the market since 1910. The "carcase" of the machine is a die casting, which supports a tungsten steel magnet, between the poles of which revolves a laminated armature complete with com-mutator and windings, exactly in the same way as the more conventional types.

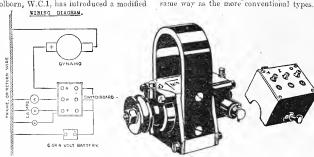

Hoffmann ball bearings are used, with are so fitted that the removal of he armature for inspection is a matter of only a few minutes.

The output of the machine is goveled by armature reaction (i.e., the arm we when revolving generates a reverse eld in opposition to that of the perm ent magnets), and as the reverse field inreases with the speed of rotatic a point is reached where the armunifields equal that of the field magest thus preventing the voltage and cuent claimed that this results in autogic regulation of the output, and that here is no danger of overphysics.

To obviate the necessity of a cubut, the windings are so proportioned had the voltage of the battery will no flow backwards through the armature to adangerous rate. Although it is necessity to switch off when leaving it stiding for any prolonged period, a small elay or a stop in traffic will not ru the accumulator down to any detriental

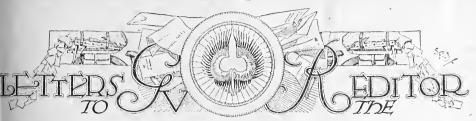

mulators.

Complete with switchboard, the generator, which has a capacity amp. 4 volt. is £6 2s. 6d. A large set of 6 volt 3-5 amp. costs £8 8s.

The wiring diagram for the Mira dynamo

The Mira dynamo.

TYRE MILEAGE.

Sir,—It has occurred to me that if riders would relate their experiences as to what mileage could be expected from tyres in various machines, novices would obtain valuable inormation on the probable yearly cost of the most expensive tem (petrol perhaps excepted) in the motor cyclist's budget. I it would be of any use, I could supply you with the letails of 15,000 miles running on a 1914 6 h.p. A.J.S.

E. S. BOVELL. Sir,-It has occurred to me that if riders would relate their

We should be glad to receive the details of which our correspondent writes.—Ep.]

ROMPT DELIVERY.

Sir,—It is not very often that one hears of manufacturers eeping to the date in delivering machines, and this prompts eeping to the date in delivering machines, and this prompts to twitte and tell you of a happy experience I recently ad. Just before the Show I placed an order for a Tamplin rele car for delivery during the last week in January. To sy surprise the car was delivered the week before it was no, which speaks well for a firm that honestly tries to give s prospective customers fair treatment. The car is giving tisfaction in every way. Further than being a satisfied ader, I have no connection with Messrs. Tamplin in any PAUL TAYLOR.

TEST OUESTION.

Sir,—For many years I have watched the various Questions and Replies" and correspondence in *The Motor yele*, but, hitherto, have never entered the arena of disssion, although I have often felt tempted to do so. I have it it to others more brilliant than myself. I wonder how my of your readers can answer the (to me) interesting oblem put forward as one of the tests given to some of the tending despatch riders at the outset of the war. You a out with your single-cylinder motor cycle quite out of ach with all such luxuries as shops, when your only plug uses work, and refuses all efforts at repair. What do you to get going?

I have discussed this problem with many motor cyclists, t, so far, no one has been able to offer a workable solution, with them, would feel interested in hearing an explanation. erefore, I hope you will find me space. . T. F. SMITH.

CCOTINE FOR LEAKY PISTON RINGS.

sir,-The following wrinkle may prove useful to some of re overseas readers outside the reach of a garage.
lecently, I had occasion to dismantle the cylinder of my
h.p. Baby Triumph, with a view to removing carbon h.p. Baby Triumph, with a view to removing carbon losit, etc. Contrary to my expectations, there was very le on the cylinder and piston head, but the rings were I filled up behind with a hard deposit. I removed this roughly, cleaned the cylinder, piston, etc., and rembled the engine, not forgetting a liberal dose of thick or reterms and cylinder. For the country the cylinder I could on piston and cylinder. On trying the cylinder, I could get the ghost of a kick out of it—no compression!

thereupon dismantled the engine again, and as the rings e considerably worn, sent piston and cylinder to a local

ir shop to have new rings fitted.

fter some considerable time I received them back. s were certainly better than the old ones, but the hanc's idea of a "fit" would have made a saint swear. uniferentially, they were not bad, but there was con-rable up-and-down play, and the gap was bigger than hould have been. The natural result of this was still compression, and the machine could not fire.

In despair, I cursed loud and long. My wife, hearing the noise, enquired what was the matter. I explained, and she said why not try seccotine? Well, to make a long story short I removed the rings, filled the grooves with secotine, replaced the rings, and assembled the engine. Result: About 6 m.p.h. on low gear, and, after some more running, 12 m.p.h. Now the machine can do about 20 m.p.h., and

is improving every day.

Moral.—If your two-stroke is running well, leave it alone. Morat.—It your two-stoke is faming, it is an old mount. And do not clean the deposit from the back of the rings if they are at all worn, unless you can make sure of getting good fitting new ones, in case of accidents.

Lahore.

W. A. ANDERSON.

SPEED ON THE ROAD AND PILLION RIDING.

Sir,-A letter from Mr. E. B. Ball on the above subject

Sing.—A letter from M. E. B. Ban on the above subject struck me as distinctly humorous.

He leads off by suggesting that any rider who has experienced "speed wobble" does not know how to drive, and, to strengthen his argument, states that he has done 65 m.p.h. and over many times on the road on different machines.

He then proceeds to suggest laws which ought, in his opinion, to be passed, presumably to clear the roads whilst

he experiments further with his speed tests.

I would beg to remind your correspondent that there is already a law existing, limiting the speed of motor vehicles on the public roads, and until he learns to comply with that law, he should at least refrain from suggesting further restrictions upon the liberty of the motorist.

Meantime, the roads continue unsafe, and motor cyclists in general get a bad name while Mr. Ball hurtles about the roads at 65 m.p.h., imagining everybody he meets a tool, including

A NOVICE IN 1903.

London, S.E.

EASING THE SPINAL COLUMN.

Sir,-There is much controversy now on the advantages and disadvantages of spring frames; also there are high prices for new innovations. My remedy, as applied to a lightweight machine, for more comfort may be useful for those who have not long purses.

My theory goes on the fact that the human body takes up

strains, etc., to the spinal column by flexion of the lower limbs. Take away their full action and the spine receives more bumps and jars. On my machine, fitted with touring handle-bars, and having to sit bolt upright, after a long run over bad roads I felt inclined to take my meals off the mantlepiece. To obviate to a certain degree this discomfort, manticipece. To obviace to a certain degree this disconnect, I fitted semi-T.T. bars, so transferring the action of the lower limbs to my arms, and received comfort by having partially done away with the bodily resistance to the jarring of the back wheel. My wrists and arms, after a little practice, did not get sore after a run, and I found much greater ease in steering.

All the summer I have been troubled with the tool-bags

at the rear shedding parts of their anatomy, so I fitted a toolbox to the top tube of the tank. Result, no trouble, and a

better knee grip.

Regarding the ordinary front rim brake and its efficiency, I have used mine consistently in tight corners in conjunction with the rear brake, and find it reliable if applied at the right time and in a proper manner.

SATISFIED.

Greenock.

A COMPETITION FOR SCHOOLBOYS.

Sir,—In reply to the letter from "In Bono Vince," re a Public Schools hill-climb, in The Motor Cycle of February 26th, may I point out to him and others interested that a club exists and caters only for past and present members of public schools. A hill-climb will be held this year (probably in August), also speed trials at Brooklands, besides

many other competitions of a sporting nature.

If anyone interested will communicate with me, I shall

be glad to give him fuller particulars.

H. B. BROWNING.

Hon. Sec. Public Schools M.C.C. Loftus Hotel, Earl's Court, S.W.

Sir.—In regard to the letter written by "In Bono Vince" in *The Motor Cycle* dated February 26th 1920, I feel sure that such a competition would fully justify any trouble met with in arranging it.

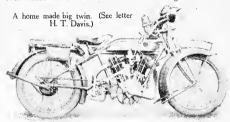

I am sure there are many Public Schoolboys waiting to

see some official views on this matter.

PUBLIC SCHOOLBOY. Newmarket.

BUILT AT HOME.

Sir,—Having noticed several machines are now being built by motor cyclists, I am forwarding you a photograph of one I have lately built. The engine is one of the type over which there was a lot, of letter writing a short time

ago, viz., $90 \times 77_{\frac{1}{2}}$ mm. overhead valve twin, geared on top 3 to 1, on which it pulls a sidecar without trouble. I think if only others would try building their own machines we might get prices down.

H. T. DAVIS.

SPEED WOBBLE.

Sir,—I am interested in your correspondent Mr. Hare's remarks on this subject. His references to the Rudge machine I can heartily endorse. My Rudge has the I.O.M. frame of 1914, and a fixed gear with adjustable pulley. It is very light, but holds the road extremely well, and it is quite easy to ride hands off at 30 m.p.h., and corners can be taken with the greatest confidence at high speed. I must confess that, for general balance, I have never had a better machine. It seems to me-that a great deal depends on the handle-bar shape. Mine are full T.T., which, admittedly, are rather low for ordinary purposes, but, at the same time, they certainly do give a much more efficient control for cornering and on greasy roads.

I, too, am in accord with some of your contributors re the sporting solo mount. A few of the new machines that one sees about are certainly the weirdest looking assortment of tubes, control levers, etc., that could possibly be imagined. and what some of them must weigh heaven only knows! I recently travelled on my Rudge with the gear at 4 to 1 from London to Seaton in the South of Devon, with a large suit-case on the carrier, with no mechanical trouble of any sort. With careful handling, the engine was quite powerful enough for any hill that was encountered on the route with the single exception of Chard Hill, for which I had to lower the gear. One thing appears to me quite clear—that is the fact that almost all the riders of such machines as Norton, Rudge, T.T. Triumph, etc., know far more about a petrol engine than the riders of these massive mounts which appear to be so popular at present. They have to, for a singlespeeder of about 31 h.p. is precious little use to anyone unless it is kept in fairly decent tune; but, at the same time, it well repays the attention bestowed upon it, which attention must surely be considerably less in the long run than that

given to the heavier machine. I should like it to be quite understood that my remarks refer in particular to the rider who considers motor cycling as a pastime for one person. For the man who uses his machine for passenger carrying. or for business, I am quite ready to admit that gears, etc. are essential. Usual disclaimer. GUY S. FISKE.

Sir,—Seated with my left elbow resting on a cushion, and with most of the "angular" parts of my body remarkably sore, I feel a strong interest in the discussion on speet wobble. For a little while past I have been tuning up 5-6 h.p. James for a hill-climb, and seeing what speet I could get out of it. Fitted with touring bars, I reached 55 m.p.h. on the level five months ago, and recent I reached 55 m.p.h. (a smaller jet used). In both thes cases it was absolutely steady. After a lot of trouble had fitted a pair of T.T. tars, and, having removed th footboards and substituted rests, I took the machine or on the road. I had put in a larger jet, and it had jus passed the 55 m.p.h. mark when it gave a suspicion of wobble. In a second the wobble had become a second an a third, but it never reached a fourth; it gracefully co tinued on its side till its energy was expended. Now feel certain that nothing could have prevented me falling at the first suspicion of a wobble I shut off just enough keep my speed, but not to have a braking effect.

My opinion is that the T.T. bars, which necessitated

slight tilting of the saddle, threw the weight of my bor too much on the front and too little on the back where Anyway, the fact remains that with the touring bars it absolutely steady at a greater speed.

As regards wobble at lower speeds, a short time ag having moved my handle-bars, I failed completely to tight the steering head. It was not enough to notice, but E. ROY KING. produced a wobble at 20 m.p.h.

TAXATION.

Sir,—At the present time a great deal is being written the subject of the proposed licence duties on motors: p

haps my views may be readable.

The revenue is presumably for the maintenance of troads, and road users should therefore pay in direct p portion to the use made of the roads. The only relia nodex of the extent of this use by the motoring public from a revenue standpoint, the amount of petrol used. most cases, the heavier the vehicle the more petrol is us-and the more speed indulged in the greater consumption motor fuel

It has been said that the cost of collecting the mo spirit duty is too great. Perhaps it would be nearer mark were it said that the cost of repaying this duty doctors and tradespeople is too great. The remedy wo seem to be the discontinuance of this repayment of du seem to be the discontinuance of this repayment of du Merchants, doctors, veterinary surgeons, and motor hin use the roads, and the public whose wants are supplied them has a right to help to pay for the upkeep of the ro which enable these privileged people to carry on the occupations. If this economy would not save as much the proposed taxes would bring in, then let the motor sp duty be raised.

Further, why should tradespeople pay no local taxat Further, why should tradespeople pay no local daxing licences for their motors, and why should doctors veterinary surgeons pay only half the usual rates, motor hirers greatly reduced rates? The public benefits the existence of these people, and it should bear the bur of taxation as it would indirectly if the fuel duties we paid in the first instances by their benefactors. At president part of the benefactors are the benefactors. the benefactors are the beneficiaries.

In short, my views are:

(1.) Abolish all motor spirit duty repayments.

(2.) Levy local taxation licences at the private car refrom all users of the roads irrespective of occupation.

(3.) Institute a new system of ascertaining the h.p.bi motors-if you will.

(4.) Continue the import duty on motor spirit, and

introduce the Excise duty.

(5.) If revenue is then deficient, raise the petrol dutie Perhaps the most economical would be the abolitions all local taxation licences, and raising substantially the nor spirit duty, or. State purchase of the motor fuel indu But that time is not yet. [This was written before the publication in The Motor of Captain E. de Normanville's suggestion.—ED.]

ARIABLE JET CARBURETTERS.

Sir,-Re the Bradford carburetter, recently described in The Motor Cycle. I beg to point out the fact that the idea s not new.

designed an identical carburetter for a friend, who

The eagined an identical carbineties for a friend, who hade and fitted it to his Scott two years ago.

'It was so successful that I made and fitted one to my war Scott. Furthermore, another friend of mine is_busy making one for his Scott, which is at present fitted with a lifferent make; and another friend is thinking of transformaths are his relative to the second of the secon

interent make; and another reduct is tunking of transforming the carbivretter on his Radge.

I may also say that I have designed an improved carbivretter on similar lines. The improvement consists of the et needle being so arranged that it automatically varies he jet opening with the throttle opening, with this important production of the control of ortant addition: The comparative position of the needle and throttle may be varied from the handle-bars, thus giving icher or weaker mixture while still retaining its automatic JAS. THOMPSON.

The last-mentioned idea is not new; it was incorporated in the Cox streamline carburetter several years ago .-

Sir,-Kindly allow me to point out to readers in your orrespondence columns the risk run in using the control or the W.S.R. jet adapter. The control of a needle valve patented in two or three specifications, and legally which his will come under I am not certain. Needle valves are atented to work with Bowden wire or a lever mechanism nder patents No. 6694, 19616, 16755, and 27060, and this ill come under one of these patents, so that anyone using is liable to be proceeded against for infringement of tent.laws.

J. T. BRADFORD.

ANTED-A LUXURIOUS SIDECAR.

Sir.—I have been a reader of *The Motor Cycle* for some ansiderable time, but up to now I have taken no active ut in the correspondence. I should be pleased, however, you would allow me to say a few words in answer to Xenes," whose letter appears in *The Motor Cycle* of

ebruary 19th.
I wonder if "Xenos" realises what an unfortunate note

letter struck to readers like myself.

The perfect gentleman remains what he is under all contions. A few mud splashes or a weather beaten appear-ice cannot transform him into a "bounder." Nor can his ount, however dilapidated, have that effect. But a man o depends on heatly brushed hair, perfect clothes, and a nerally spick-and-span appearance to earn the title of ntleman—well, of course, it is well-known he is the Bounder."

Doublet:

On his own confession, "Xenos" is not a "youthful iot." If he had been so, well, I could have said there is hope for him: that it was a question of age, and he hald ultimately grow out of having ideas so reverse of

My husband and I ride a powerful Matchless outfit. Our aal week-eud trip is to a select residential town some ndred miles distance to see our people. Weather condisas do not count with us. I think "Xenos" would have nted with horror at our appearance on our last trip. mething weut wrong with the mudguard on the sidecar eel, and as we could not fix it ourselves, we took it off d put it in the sidecar, to be adjusted at the end of the armey. Imagine my peachy complexion decorated with eaks of brown mud, my cunning little motor bonnet tied when the wind got very bad, with a piece of thicking hunted out from the tool box. But I am sure these ails had no effect on my character. I am sure that mediately I got a little travel stained I did not cease to a lady nor become a "bounder."

and not become a bounder.

may say that after half an hour, when I had had time don some of the glad rags packed in the sidecar, we were the ready to pay our round of visits to our friends, whose ages shelter luxurious cars, but who are still pleased to I us friends, in spite of our mount and our road

searance.

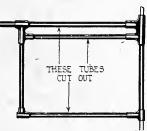

Jearance. Here's luck to the "impossible grids"! And here's luck their sporty owners, who can afford to defy appearances. Id Bill," bless him, and his cronies were perfect gentlen (nobedy dare doubt it), but it was not their make-up it made them so,

I do not know if "Xenos" would like me to advise him on his choice of a mount, but the only thing I can recom-mend him to ride and still preserve his faultless Bond Street appearance is a bassinette, Millom.

IMPROVING A SIDECAR CHASSIS.

Sir,-I have lately converted an old pattern sidecar chassis to an underslung type with great success. Not only is the appearance much enhanced, but I find that the steering is very much improved. The old sidecar was of the cane

bath-chair pattern, and the weight was well over the back axle, and I always found the machine steer badly, especially when empty, in spite of the most careful lining up. also noticed that when I had an extra load, i.e., with a child sitting in front of the ordinary passenger, the machine ran more steadily.

The original chassis design.

Now that I have the dropped chassis and fitted a ceachbuilt body where the weight is practically all in front of the axle, the machine runs steadily, whether loaded or empty. I find that there is far more weight on the front wheel now, and it is to this I attribute the good steering and steady running.

It may interest your readers who have one of the old type chassis to know how the conversion was made.

The plan of the old chassis was like the sketch. clean through the tubes as arrowed, and put bent tubes in

The old chassis converted to an underslung type.

place of the pieces cut out, so as to give the chassis 6in. drop and lengthen it at the same time. One of the tubes was of larger diameter

the others on the old chassis, so I cut this right out and replaced it by a been tube right through the lugs. The joints were made end to end, with a stout piece of small tube for a liner, the joints nearest the axle being covered with lugs, and a crossbar put in to give extra strength. The whole job only cost about £2, and has made my machine look 50% better.

Scottish One Day Reliability Trial.

The Edinburgh and District M.C. are holding an open reliability frial on the 27th inst.

Import Duty into U.S.A.

The duty on British motor cycles imported into the U.S.A. is 25% ad valorem, and not 45% as inferred by a contributor a few weeks ago.

D.R.'s of the Third Army.

Notices have been sent out where pos sible to ex-despatch riders of the Third side to ex-despatch riders of the Third Army Signal Company, with the idea of arranging a reunion. Mr. D. Coard, Clyde House, Cheam, Surrey, has the matter in hand, and will be pleased to hear from D.R.'s who are interested in the idea, and who belonged to the Signal Company in predict of the Additional Company in prediction. Company in question, at the earliest possible moment.

International Show at Antwerp.

An International Motor Show is being organised in connection with the Antwerp Exhibition, and will be held from May 15th to June 14th. The show will be held in the Hall of Sports, which is 500ft; long by 180ft. wide. motor manufacturers are invited to be thoroughly represented as early as possible. The Director of Concessions for Great Britain is Mr. John Bellham, 303, High Holborn, London, W.C.1, from whom further particulars and plans can be obtained. On March 15th stands will be allotted by ballot.

An Artistic Sidecar.

Personal taste expresses itself in some peculiar ways, but perhaps the strangest example of this connected with things motoring was a sidecar we recently saw, the panels of which were thickly cnamelled a bright yellow as a back-ground for intricate Chinese designs in black, gold, and red lacquer work. This highly ornate vehicle was attached to a New Imperial twin, and was apparently a private turnout, and not an advertising stunt. If this sort of thing goes on we shall be having sidecar bodies panelled with valuable oil paintings, or decorated with cameo carvings, or perhaps the newly ultra-rich will indulge in repoussé panels of gold.

All-day Traps.

Particular care is necessary on the London Rōad, Bromley, in either direction, as all day traps (Sunday and weekday) are in operation. Also at Bromley Common and between Orpington and Green Street Green.

Further Police Activity.

We are informed that the police are specially active in the neighbourhood of Gracechurch Street, London, E.C., with regard to noisy machines; also, that there are traps working in Woodford and Wanstead, between Snaresbrook Station and Warren Wood, and between the Napier Arms and Warren Wood.

We also hear that the police are on the alert at Castle Bromwich, Coleshill, Stonebridge, and other districts which come under the police jurisdiction of Coleshill.

The Institution of Automobile Engineers.

The London graduates of the Institution of Automobile Engineers are about to renew their pre-war practice and hold a dinner and concert. The gathering will take place at Anderton's Hotel on Satur-day, April 10th, at 6.30 for 7 p.m., and will be limited to forty-five graduates and guests, so that early application should be made. Single tickets will be 10s. 6d. each, and double tickets admitting a graduate and a lady will be 15s. 6d. A musical programme is being arranged to follow the dinner.

Special Features.

WIND - WAGGONS. PETROL POSITION. RECENT DESIGNS.

Roadside Adjustments.

With modern motor cycles, tools not often required on the road, and ca less riders are apt to leave them in th garages. Motor cyclists should reme ber that when a tool is required, it generally wanted badly.

Motor Tankers.

It is not perhaps generally known the modern tank ship which brings petrol to this country is driven by intercombustion engines. The latest ships be built for this trade include a num of 2,500 tonners, each propelled by 1 550 b.h.p. Diesel engines.

Motor Cycles on the Riviera.

Though cars on the Riviera outnum motor cycles in the proportion of possi motor cycles in the proportion of possi-500 to I, a certain number of local ric are to be seen in and around N. We recently observed P. and M.; field, and Triumph riders at differ times, and actually three scooters have arrived. An Autoped rider—apparer an American—amused himself by ric up and down the promenade with a n solemn expression, visitors to La (d'Azur making funny ejaculations as

passed. The A.B.C. Skootamot now in the Nice age hands, and was c sionally to be taking the ozone:

Seeing that the sidecar is more fully recognised in this country as a passenger vehicle than in France, it is anomalous that it should be left to Frenchmen to develop the idea of forming a sidecar taxi service. The outht shown is another of the taxi outfits—thatley-Davidson now plying for hire on the streets of Paris.

MOTOR CICLE

Eight Hundred Replies.

A correspondent writes to say that he recently received over 800 replies to one small advertisement in The Motor Cycle.

No P. and M.'s in This Year's T.T.

Messrs. Phelon and Moore, the makers of the P. and M. motor cycle, advise us that they took the lead in the matter of negative decisions, and were the first firm officially to notify the A.C.U. that they did not intend to compete in the T.T. this year, as they found it necessary to concentrate upon production.

Motor Cycle Touring in Algiers.

Subsequent to the Paris-Nice trial, Jesse Baker (Scott) and J. A. Newman (Sunbeam) crossed to Algiers with their motor cycles. Two postcards received from Baker are full of their delightful holiday and first-class roads encountered—in fact, the Algerian roads are referred to in the communication as the "finest roads in the world." The machines have behaved excellently, and a final trip to Morocco was proposed.

The A.J.S. to Compete in the T.T.

In consideration of the preparatory work already done by the A.C.U. and the Isle of Man authorities for the T.T. Races, Messrs. A. J. Stevens think the event should have all possible support from the trade. It has been decided definitely that an A.J.S. will defend its title. It will be remembered that a 23 h.p. A.J.S. is the present holder of the Junior T.T.

Rezearch.

We wish to draw attention to the leaderette on the first page of this issue on the subject of research. The subject is a vital one, as the possibilities of the motor cycle are not yet fully realised. Under existing circumstances almost any form of self-propelled machine finds a ready sale, and this is apt to cause a fack of enthusiasm towards promising developments, and a dimming of future possibilities. The C. and M.C.M.T.U. have in hand the beginning of a scheme

to further research work, and it is to be hoped that they will receive the assistance which they deserve.

London-Land's End Trial.

Arrangements have been made with the Berkeley Arms Hotel, Cranford Bridge. Hounslow, for cold supper to be provided for competitors in the London-Land's End trial. The supper will be served from 8 p.m., and all desirous of participating should notify the proprietor, Mr. A. Powley, by telephone (Hayes 29) or letter at least two days before the event.

"The Autocar" Overseas Number.

To-morrow, the 12th inst., The Autocor British Empire and Overseas number will be on sale all over the country. Readers interested in the progress of the automobile industry will be pleased with the special contents of this bulky number. An article that will make a special appeal to motor cyclists is a description of a 750 miles test of the air-cooled C.A.R. This vehicle, it will be recalled, has a three-cylinder air-cooled radial engne, and the illustrated description of its performances on the famous hills of Somersetshire, Devoushire, and Cornwall-including Porlock, Lynton, and Beggar's Roost-constitute the first prolonged test of a new British air-cooled light car.

Motor cyclists wishing to keep themselves au fait with features of modern cars will note with interest The Autocar illustrated review of 1920 models.

Designed to cultivate British trade Overseas, the whole issue is a remarkable one, and is on sale at 3d. as usual.

The Circuit de Paris.

The Circuit de Paris, a trial organised by the Auto-Cycle Club de France, consisting of a two-day run, starting from Versailles, will be run off at Easter. The average speed will be thirty kilo-

The average speed will be thirty kilometres an home. In unrestricted sections competitors will be penalised for arriving late in the controls. In the observed section the competitors must keep between two cars travelling at thirty kilometres an hour, placed two kilometres apart. Competitors will be penalised five marks if passed by the second car, and one mark for each five minutes behind this car. Further particulars can be obtained from M. E. Cheilus, 6, Rue du Rocher, Paris.

The A.C.U. 1920 Elections.

The annual general meeting of the A.C.U. will be held on Saturday, March 20th, at 3 p.m., at the First Avenue Hotel, High Holborn, London, W.C.I. This will be followed by the election of individual meeting to sit on the General Committee.

The A.C.U. is considering the organisation of a rally or meeting of ex-despatch riders, and it has been suggested that the resunion should take place at Brooklands on Easter Monday.

How it Happened!

We cull the following from "Court, Society, and Personal" in Saturday's Daily Mail:

"Sir Philip Sassoon, the Premier's private secretary, returned to his duties yesterday after a week's absence owing to a motor scooter accident. While 'scooting' in Hampshire he wanted to stop urgently, but through not having leanned the mechanism sufficiently he pulled the accelerator instead of what he thought was a 'stop' lever. The result was a bad spill into a gravel bank. Sir Philip has now given up the scooter, and also an aeroplane which he bought last summer."

Whilst sympathising with Sir Philips in his unfortunate accident, we can safely predict that he will give up all his mechanical toys if he persists in "pulling the accelerator" when he desires to stop!

AT THE INTER-VARSITY HILL-CLIMB. L. P. Openshaw, on an overhead valve Zenith, who made the fastest time of the day and J. V. Prestwich (Diamond), winner in the lightweight class

NOTES ON THE COLMORE CUP TRIAL.

Random Jottings by Members of "The Motor Cycle" Staff who Observed the Trial at all Places of Interest.

Snaps from Saintbury.

THE single-cylinder Sunbeam has an exhaust note of its own.

Seymour Smith (Ivy) had bad luck in puncturing at Saintbury.

Vale (Norton) overshot the corner_at the top of Saintbury through the arrow being torn.

The little Connaught ran well-as it did in the Paris-Nice.

Who discovered that by dropping valve parts in between his wheel discs it is possible to obtain a new noise, so far without classification?

Gibb on a Levis is a new combination, as is Colliver on an A.B.C.

How to make a noise like a Scott. Take one well-tuned Levis and "rev." it in low gear.

Albert Milner's hat was obviously designed for the opposite sex. A white "tammy" with a dash of pink.

Our frequent contributor Wharfedale competed in the event, and rode steadily throughout.

The acceleration of the Levis and A.B.C. machines was the subject of much comment.

Gambols on Gambles Lane-and Other Matters.

We had a long chat with Capt. Jack Woodhouse, D.S.O., M.C., who was watching the trial at Gambles Lane. One wonders if he will return to competition work.

Greasy hills and solo machines with foot-operated clutches are not a good combination. This was very obvious on Saturday week.

Two 10 h.p. Reading standards—one solo and the other with sidecar—took part in the trial and ran consistently. These big American machines are newcomers to British competition work.

G. Hands brought his sporting Calthorpe light car up Sudeley in great style.

Three single-geared machines were entered, and their performances show that had the roads been dry the hills would not have stopped their plucky

The George-in-the-Tree is the name of the hotel over which Albert Milner presides, and has no reference to a well-known competition rider and a certain incident in a pre-war Scottish Six Days.

It was particularly noticeable that the old hands changed down early, and CIO

negotiated the grease on their lowest gear ratio with the throttle only open so far as was necessary to a steady climb. There was considerable and unavoidable baulking at the foot of the hill, owing to passenger machines failing, and to this was added a certain amount of trouble, owing to the thoughtless behaviour of non-competitors, whom, it appears, nothing will prevent from unnecessary attempts (which usually fail) to climb the fill while the competition is in progress. Unfortunately, car owners are sometimes as bad as motor cyclists in this respect.

The hairpin bend test would have been an excellent feature in a sporting trial Non-competitors who appeared unable to persuade 6 h.p. and 7-9 h.p. outfits upered to hower part of Willersey migh have walked up. They deprived severa of the descending competitors of the non-stops on the outward trip.

The two most difficult portions of th route were apparently unobserved; the were the descent of Willersey and jusbeyond the top of Sudelev.

The acceleration test formula neede another factor d (coefficient of persons dexterity!). Such a test should have been carried out on a safe road, but a no marks were lost by ignoring it. was better to preserve the non-stop the

In Sudeley Park. The Premier three-wheeler, which ran consistently throughout.

among individuals, but we think in a reliability trial, supported by manufacturers in order to prove the reliability of their machines on the road, it was scarcely fair. The bend is erroneously termed a hairpin. It is a very sharp V country lane. So here again, as in the flexibility test, the human factor was greatly in evidence. There was considerable discussion among spectators at the point regarding the merit of the test.

Comments on Route.

A splendid run, well organised, and thoroughly enjoyed, but-too much main

Kuhn's Levis must be "very special," judging by its resonant explosive "puffle." attempt heroics. Some who did study the rules overlooked this, came to grief in attempting to do much here.

The A.B.C. machines appear to very stable at speed on grease, but the frightful "pops", when changing annoying. Porter appeared to he trouble with oiled plugs, the inferesteing that drip feed oiling is by no me as easy to design as might be imagined

Discussing with F. W. Apples (B.S.A.) at lunch-time as to how a should get back up Willersey, we or cluded that it would be safer to Il over the loose stones than to attent the 6in. strip at the side of the hear As events proved, we were both unwe, and we certainly "rolled"!

MOTOR (FCLE

Vlew-points on the Colmore Cup .--

The wily birds had been practising Willersey, and they knew that the narrow strip of unmetalled surface was rideable.

On picking himself up after a fall, a competitor was surprised to see W. F. Newsone helping him to restart. Quite a reunion, as they were stationed at the same M.T. repair depot during the war.

Consistent and steady running was the outstanding feature of the Premier three-wheeler. We ticked along for miles together at 20-22 m.p.h. On the Roel Gate stretch, which was deep in puddles, it throw out a bow wave, like a destroyer at 40 knots.

We congratulate Eric Williams and the makers of his N.U.T. on winning the Colmore Cup. It was the machine's debut in competitions. Eric Williams is the present holder of the Junior T.T., which he won on a 23 h.p. A.J.S.

Gibb's performance on his 2½ h.p. Levis, in winning the Calthorpe Cup for machines under 257 c.c., was good. On general marking he has been awarded a first-class certificate. On account of touching the ground with his foot on the hairpin he lost ten marks. He secured a gold medal for the hest performance in his class.

The second and third best performances were by drivers of sidecar machines, L. Newey (6-7 Ariel sc.) and G. Dance (3½ Sunbeam sc.) respectively.

The "hairpin" was rather appalling. At the last moment some decided to use the grass as a banking; luckily, it worked!

The Cex Atmos carburetter on a Scott appeared to interest several local enthusiasts who gathered together at Cheltenham. Truly, its appearance is fearsome as its performance is de-

F. Porter made a marvellous show, iding a single-geared Levis, which he persuaded up the hills in a manner which would not have disgraced a machine of louble the engine capacity.

Milner rode a Diamond fitted with a pecial overhead valve cylinder fitted to J.A.P. crank case-an adapted job very eatly carried out.

Busby (Verus) actually went through is hairpin bend test twice—he merely-blowed the arrows. He was successful oth times, but the slip lost him twenty inntes. It was Busby's first competion, and he rode very well throughout is trial. He is only a little over sixteen is as of acc. ars of age.

The team prize has not yet been warded. Why?

It is somewhat astonishing that ten itys after the event the official results and not been announced. Usually the atton Club is very prompt in this direcKershaw (Verns) was using a modified engine intended for the T.T., but Verus machines will not compete this year.

Fancy head wear is again fashionable. One of the Ariel riders had a neat stocking cap of white, his passenger the same thing in scarlet.

A. Milner (2³/₄ o.h.v. Diamond) on the slow section on Saintbury.

A HIGH-CLASS LIGHTWEIGHT.

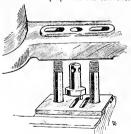

A new lightweight-the 23 h.p. Francis-Barnett, of interesting design.

If only on account of the pre-war connection of Capt. Gordon Francis with the Lea-Francis firm, a new motor cycle designed by him is of more than usual interest.

The machine we inspected last week certainly comes up to expectation, although there is nothing of an unorthodox nature in its make up. In place of novelty, refinement is apparent at many points, while on the road it handles easily, is exceptionally quiet, and provides an unusually comfortable riding position.

The engine is the 23 h.p. four-stroke J.A.P. with side-by-side valves, and has a long tail exhaust fitted in conjunction with a very large silencer. The transmission employed is the conventional

The gear box adjustment of the Francis-Barnett.

chain-cum-belt through a two-speed Sturmey-Archer gear box, the driving chain being totally enclosed in an aluminium dustproof case.

A frame of the diagonal top tube type is used in conjunction with a saddle tank of handsome design finished in red with black panels. This tank has rounded edges, and contains a recess at its forward end partially enclosing the steering head.

In order to facilitate chain adjustment, a rather neat device is embodied in the gear box mounting, consisting of a short vertical shaft carrying an eccentrically disposed pin. This engages in a slot in a steel plate lying on top of the gear box, and on being turned slides the gear unit backwards or forwards as required.

Brake Adjustment.

Another refinement is the method of adjusting the parallel motion rear brake. This is shown in one of the illustrations, from which it will be seen that the cperating rod is fitted with a hand-operated disc on the end of the pull rod. This is quite common practice on cars, but we think it is the first time it has been used on a motor cycle. Lubrication is effected by a plain hand pump, which is neatly let into the tank.

Large footboards with toe shields add to the comfort of the rider, and a well fitting undershield and belt guard protect the engine, gear box, and belt from mud and water.

Two exceptionally large toolbags, containing a complete tool kit, are other

good features of this handy little smount. Altogether the new Fram Barnett, is a very smart and attract proposition, and one which promises take a front rank position in the wo of motor cycles.

The equipment includes C.A.V. meto, B. and B. carburetter, Brampt forks, and Dunlop 26×24in. tyres.

price is eighty-four guineas.

Details of the parallel action brake and car type adjustment.

MOTOR CYCLE SPRING NUMBER AND BUYERS' GUIDE.

MARCH 25th has been fixed as the date of the Annual Spring Number of The Motor Cycle. Special articles are in course of preparation, and a feature of the issue will be an illustrated Buyers' Guide.

Motor Cyclists at Oxford and Cambridge Universities -Organise Sporting Event.

THE first post-war inter-'Varsity motor cycle event was held last week end, and resulted in a dead heat, each

University gaining 32 marks.

The day-was beautifully fine, though the wind was cold. This, however, served to dry the surface of Aston Hill, which to dry the surface of Aston Hill, which was in pretty good condition, though a trifle bumpy in places. The hill is ideal for the purpose, and has long been popular among motor cyclists. There were numerous spectators. The event created a great deal of interest, and, considering the fact that the delivery of new machines is slow, the number of competi-tors was quite remarkable. Of the two tors was quite remarkable. Of the two Universities, Cambridge produced by far the most entrants, and it is a curious fact that motor cycling has always flourished that motor cycling has always flourished to a greater extent on the Cam than on the Lais. Among the numerous machines to be seen at the start, we noticed two of the new N.U.T.'s, a Beardmore-Precision, and one of the new flat-twin Harley-Postland Davidsons.

Among the competitors, the best known rider produced by Oxford was Openshaw, who is now a professor of engineering at the University, and is riding an overhead valve Zenith, the only machine of its type in the competition, which, as usual, was

in the competition, which, as usual, was wonderfully fast, and well ridden.

On the side of Cambridge, we noticed J. V. Prestwich, son of Mr. J. A. Prestwich, of J.A.P. engine fame, who was iding a Diamond. The organisation was good and the field telephone worked with the width. out a hitch, while the events were quickly un off.

The event concluded with a slow hillclimb over a distance of 100 yards. Slipping of clutches or touching the ground with the feet was forbidden.

with the feet was forbidden. Three Cambridge owned cars were first, second, and third respectively, and the slowest motor bicycle was Rathbone's Rover (Oxon). Time, Im. 15s.

In attaining the results, five marks were awarded for first place; three marks for second place, and one mark for third place. The first three classes were not counted, as Oxford could provide no entrants, so that Cambridge had a walk over in these events. over in these events.

A Scottish Trial 'Amidst Highland Conditions.

Glasgow Western Club's Trial for the Palmer Trophy last Saturday.

Glasgow Western M.C.C. Reliability Trial. 1. Robinson, club sec., negotiating the hairpin at the top of the Rest-and-be-Thankful.

THE first tarpaulin-swathed and begoggled competitors began to appear at Bell's Showrooms about 8.30 a.m. on Saturday, and soon fifty-eight of the sixty-four entrants were lined up by the starter in a driving drizzle. A large crowd kept the police busy, for practically every well-known make of machine was represented. The Harley-Davidson was present in force, including several flat twins. A. Lindsay sported a Scott, D. S. Alexander was mounted on a very knuttish N.U.T., W. Deans on the latest Lea-Francis, and H. Fairley on an A.B.C. The Verus team, consisting of B. Kersham, Busby, and Bird, had arrived from Birmingham to participate, and A. Brown stamped himself a sportsman by appearing on an ancient Rugde-Muthi.

Rest and be Thankful.

From Glasgow to the first check at Inverbeg nothing served to enliven the monotony of pot-holes and drizzle, save for a fleeting vision of James Beck repairing a puncture in the slush. On skirting Loch Lomond, the real Highland scenery began. At Inverbeg, most of the competitors, having ridden in fear of the promised secret check, had no time to lose.

Leaving the main road, the non-stop section began with a stunning little gradient rearing suddenly from the chaos of crags and heather. Most of the riders were new to the country, and the first right-angle corner came as a surprise to many. After this the real work of the day began in earnest. Over wet sand and protruding chunks of bedrock we crossed the summits against a hurricane, but the view of Loch Long from the heights was well worth the climb.

Rest and be Thankful found many with

Rest and be Thankful found many with hot engines and no reserve gear; but, on the whole, the performances were good. A. J. Lindsay (Scott) made a very clean ascent, the A.B.C. climbed steadily, J. V. Russell (the only Morgan entrant) took the terrific gradient cleverly, and Steels (3½ Douglas) climbed well. The two trade Verus riders, equipped with three-speed gear boxes, seemed safe; but H. Mortimer Batten, mounted on a two-speed Verus, had-nothing in hand at the final corner. The hurricane almost unsaddled him, but he got through by delicate clutch wangling. It was noticeable that at every corner the wind was blowing in a different direction, and at the worst corner I. Robinson (4 Blackburne) struck a sidecar and the wind simultaneously, and had the misfortnet to fall.

The check was half-a-mile away, and the massed descent of the mountain face was, at any rate, thrilling. As a result Deans lost time, and therefore gave up the trial, which seemed unwise. For a solid hour we rested by the bleak margin of Loch Restill, while the whirling sleet crusted our onter garments and penetrated to the impermost recesses of our clothing; but descending to the valley we found the air mild and the sun shining.

The Lunch Stop.

An excellent hunch, amidst trophies of the Highland Chase, was served at Arrochar Hotel, and here we were delighted to find our friend and erstwhile colleague Alan Hill checking in. Hill, who has recently undertaken a post in the competition department of the Palmer Tyre Ltd., was driving the Morgan he so skilfully piloted through the Scottish Six Days, and later he succeeded in scaling Glen Douglas, no mean feat on standard gears. This hill was perhaps the tit-bit of the day, for, in addition to numerous hairpins and stiff gradients, the surface is difficult. Many of the sidecars failed utterly, and not a few of the solo mounts,

so that the line of riders was now assu-

ing a somewhat weedy aspect. The greatest difficulties were now owthough, that haunting terror, the sec check, still compelled us-to ride dead time whatever the conditions. Varia non-stop sections and unexpected a served hills were encountered, and have a dim recollection of seeing dring the second of the sec

fitties had passed us in the interim.

One competitor caught fire, and noticed an English rider storm an uknown gradient at terrific speed, the fail hopelessly at the first hairpin.

little experience of Scottish trials teach one to go canny on unknown hills, at to keep a wee dram in the bottle.

The Finish.

The day finished at Cannisburn, whe most of the muddy and weatherwo riders appeared in excellent spirits, for though trying in many respects, the eve had proved thoroughly sporting, and we so excellently organised that no murm of possible improvement reached our ear

of possible improvement reached our ear At mid-day on Sunday the officials we still wallowing in a sea of figures, and were informed that two of the checke had not yet drifted in from the mounta top. We were told that, while there me to the sea to the others, the following at any rate he got through with clean sheets, and the cup will probably go to the be performer, horse-power, otc., taken in account: J. Alexander (A.J.S.), Jam Beck (3½ Sunbeam sc.) Harry Fairl (A.B.C.), Busby (2½ Verus), B. Kersha (2¾ Verus), at A. J. Lindsay (Scott).

Herts County Club (M.C. Section).

The motor cycle section of the above club has been revived, and numbers of new members are being chrolled. Berk-hamsted will probably be the official headquarters,

N.M.C.F.U. (Leeds).

A most successful musical evening was held at the Hotel Metropole on the 3rd inst., Mr. James Roberts presiding. Over 300 were present, including representatives of the York and Wakefield Motor Clubs.

Nottingham and District M.C.C.

A general meeting will be held at the Welbeck Hotel on Tuesday next, at 7 p.m. Nominations for the following are required not later than Saturday: Captain, two vice-captains, hon. secretary, hon. treasurer, and eight members for the committee. All motor cyclists are invited to attend.

Oxford University M.C.

A most successful and well-contested hill-climb was recently held, with results as follows: Unlimited solo and unlimited as tollows: Onlimited solo and unlimited sidecar classes, L. P. Openshaw (8-10 Zenith); 550 c.c. sidecar class, G. I. Davies (3½ Ariel); 750 c.c. solo class, E. K. King (5-6 James); 500 c.c. solo class, J. E. G. Harwood (3½ Calthorpe).

N.M.C.F.U. (Sheffield).

Organised by the above Union, a mass meeting will be held on Saturday, March 13th, at St. James's Hall, Bailey Street, Sheffield, beginning at 7 p.m. sharp. The speakers will be Mr. Douglas Vickers, M.P., Mr. Torkington, of the A.C.U., Mr. E. S. Shrapnell-Smith, and other influential gentlemen. The subjects for discussion are petrol prices and

Loughborough and District M.C.C.

A hearty invitation is extended to all motor cyclists of the County of Leicester to join the above club, which is affiliated to the A.C.U. An attractive programme is being arranged, and teams will be entered in the leading 1920 competitions. The opening social run will take place on Sunday next, when a good turnout is expected. Full particulars may be obtained from the hon. sec., Mr. K. S. Topping, 64, Frederick Street, Loughporough.

East Lancashire M.C.C.

Mr. A. Morton presided over the an-lual meeting, held on the 26th ult., and an interesting address discussed the ligh price of petrol and the suggested ubitrary method of taxation. The pre-ent membership total is 90, but it is uped nearly to double this figure in the near future. An open hill climb he near future. An open hill climb vill be held on July 3rd, in addition to which a most ambitious programme for he year has been arranged.

Ilkeston and District M.C.C.

A general meeting will be held at the Rutland Hotel on the 18th inst. at 7.15 p.m. On Easter Sunday, a run to Bake-well has been arranged, starting at 1 p.m. from the Rutland Hotel.

Reading and District M.C. and L.C.C.

At the annual meeting held recently, a resolution protesting against the suggested form of motor cycle taxation was unanimously adopted, and a copy forwarded to Lt.-Col. Leslie Wilson, M.P. for the borough of Reading.

Middlesex M.C.C.

Mr. J. A. Prestwich, of engine fame, has accepted the position of president. On the 21st inst. the opening run will On the 21st inst. the opening run will take place to Bedford, the start being from the "Red Lion," Barnet, at ten o'clock. The hon. sec. is Mr. S. A. McCarthy, 2, Nightingale Road, Lower Clapton, London, N.

Burton and District M.C.C.

A new club, with the above title, has recently been formed, and has been enthusiastically supported. A general meeting will be held at the Station Hotel on the 19th inst. at 7.30 p.m., when all motor cyclists are invited. The hon, sec. is Mr. A. E. Cook, 60, Outwoods Street, Burdonen Trans. Burton-on-Trent.

Bedford and District M.C. and L.C.C.

Already four silver challenge cups have been presented, and it is hoped that more will be forthcoming. In addition, a number of gold and silver medals are to be awarded to winners of events. The opening run will be held on Sunday next, weather permitting, meeting at John Bunyan's Statue, Goldington Green, at 2 p.m. A meeting will be held on Saturday at headquarters, Rose - Hotel, High Street, at 8 p.m.

Manchester M.C.

The opening run will be held on the 21st inst., and is open to all local The start will be made at 2.30 p.m., from the Swan Hotel, Bucklow Hill, Cheshire. All intending competitors are asked to assemble at 2 p.m. The honsecretary is Mr. W. A. Cottrell, 75, Broad Street, Pepdleton, Manchester.

Have you Signed the A.A. Petrol Petition?

Remember patrol prices affect others than motor cyclists therefore GET YOUR FRIENDS TO SIGN ALSO.

Every Signature counts!

Cross Keys and District M.C.C

On the 21st inst., the opening run will be held, and all old and prospective members are asked to attend. Mr. A. G. Dunn, 39, Gladstone Street, Crosskeys, is the new hon, secretary,

Motor Cycling Club.

An excellent entertainment followed the dinner given to past and present members of the M.C.C. Committee at Pagani's Restaurant on the 2nd inst, Some excel-lent songs were sung by Miss Head, daughter of the popular chairman.

Ilkley M.C. and L.C.C

A useful booklet, containing a list of officers, members, and fixtures for 1920, is now ready. At a general meeting, held on the 2nd inst., it was decided that the Open Reliability Trial, on June 5th, should be held over a distance of boat 100 miles. about 140 miles.

Swinton and District M.C.C.

The opening run to Chester will Le held on April 3rd. Prospective members should apply in person at the weekly meeting, held every Tuesday, at 8.15 p.m., at the Bull's Head Hotel, or communicate with the hon, secretary, Mr. L. H. Harris, 15, Kersal Avenue, Pendlebury.

North Derbyshire M.C.C.

A meeting of the affiliated clubs' representatives will be held at "The Mallet Tool," Chesterfield, on the 27th Maint 1001. Chesterneid, on the 2/th inst., at 3.50 p.m., in order to frame rules governing the competition for the East Midalad Centre Challenge Trophy, which is to be awarded to the club making the hest performance in the three open trials allotted to the East Midland District.

North Eastern A.A.

Representatives from the Sunderland and District, Durham and District, and Newcastle and District Motor Clubs attended a meeting of the Motor Cycle Board of the above association, and decided to protest against the suggested system of taxation. It was provisionally decided to include in the programme of events a reliability trial for Whit-Monday, a hill-climb for June 26th, and an inter-club team trial for August 24th. A competition committee was elected.

Ealing and District M.C.C.

Over forty members and their friends attended the annual dinner, which was held recently at Buol's Restaurant, with Major A. M. Low in the chair. The hom. sec., Mr. F. Longman, remarked that the amount of support accorded in 1919 was disappointing. The Longman trophy was presented to Mr. Malone, the winner of the half-day reliability trial held a short time ago. An excellent concert followed the dispersion and was much assentiated. the dinner, and was much appreciated.

Cab News .-

Proposed New Hull Club.

It is proposed to form a new club for Hull, to be called the Hull Motor Cycle Club. All motor cyclists are invited to join, and should communicate with the hon, sec., whose name and address will be published shortly in these pages,

Widnes M.C.C.

On the 14th inst, the annual meeting will be held, and the usual business transacted. Particulars as to time and place will be published in the local press. All motor cyclists are cordially invited. Prospective members should apply to the hon. sec., Mr. A. J. Bailey, 57, Regent Road, Widnes, for all information.

Bolton and District M.C.C.

At a meeting held recently, the opening run was arranged to take place on the run was arranged to take place on the 28th inst. The following officials were appointed for the current year: Mr. H. Catlow, chairman; Mr. S. Parker, trials hon. sec.; Mr. Crompton Guthrie, captain; and Mr. C. Walmsley, subcaptain. The hon. sec. and treasurer is Mr. J. E. Whittaker, 205, St. George's Road, Bolton (telephone 1320), to whom all intending members should apply for particulars. The subscription is now 7s. 6d., which sum includes affiliation (under scheme A) to the A.C.U.

An owner of an Indian outfit enjoying the trail in winter. A

SNOW

SCENES.

North London M.C.C.

Twenty-two members took part in the opening run to Great Missenden recently and a most enjoyable time was spent and a most enjoyable time was spent.

An exceedingly sporting programme habeen arranged for Easter, and moto cyclists of both sexes are cordially in vited to join the club, and the strengthen its position. Mr. Bernare, Staley, Victoria Avenne, Finchley, N. Staley, Victoria Avenne, will be pleased to give all particulars.

Stalybridge and District M.C.

The programme of events for 1920 ha now been provisionally fixed, and shoul prove of considerable interest. For the current month two events are scheduled a social opening run on Sunday nex and a social on the 21st. Intereste motorists are asked to communicate wit the hon. sec., Mr. G. E. Watts, Balmor House, Stalybridge, when all particula will be given.

Manx M.C.C.

Recently the first hill-climb organis by the club was held on Creg-na-Baa Hi three-fifths of a mile being the distar timed. The fastest climbs were made J. Mylchreest (3 A.B.C.), 58s.; T. Shes (7-9 Indian), 58.5s.; and L. Dyer Triumph), 60s. Dyer's performance v particularly interesting, in view of 1 fact that his machine was a 1911 mod The winning A.B.C. was only delive: the day previous to the climb.

Eastbourne and District M.C.C.

A booklet, containing a list of A.C. fixtures, club runs, and competitions nxtures, club runs, and competitions. 1920, is now available. On the 14th penalty run has been arranged, demencing at 10 a.m. Prizes for this evwill be presented by Mr. R., A. Niemayer. On the 21st a run (starting the 1st and 1st mayer. On the 21st a run (startin p.m.), and on the 28th a breakfast to Cranbrook (breakfast, May Garlar starting at 7 a.m., will be held. A f days' tour of Devonshire has also b arranged, to commence on April 1st.

Woolwich, Plumstead and District M.C.C.

The booklet containing a copy of the rules and fixture list for 1920 is now ready. On the 20th inst, the Home Counties open hill-climb, organised by the Essex Motor Club, will be attended, and on the 28th an inter-club run with the Rochester M.C. to Tunbridge Wells has been arranged. A special prize is to be awarded to the member who introduces the greatest number of new members during the year. The subscription is 10s. per annum, payable in advance, and all correspondence regarding membership should be adressed to the hon. sec., Mr. F. J. Ellis, 3, Nightingalo Place, Woolwich, S.E.18, who will gladly furnish all particulars.

A selection of questions of general interest received from readers and our replies thereto. All questions should be addressed to the Editor, "The Motor Cycle," ao, Tudor Street, London, E.C.4, and whether intended for publication or not must be accompanied by a stamped addressed envelope for reply. Correspondents are triged to write clearly and on one side of the paper only, numbering each query separately, and keeping a c-bpt for ease of reference. Letters containing ligal questions should be marked "Legal" in the left-hand corner of envelope, and should be kept distinct from questions bearing on technical subjects.

Endorsement of Licences.

Recently I was summoned for riding a motor cycle and sidecar with the side light out. Will you please inform me if the Court had the power to endorse my licence for so trivial an offence? Up to now I have a clean licence.—

Your licence may be endorsed for any offence under the Motor Car Act, except for the first two occasions on which you are sunumoned for exceeding the speed limit.

Four Stroking.

(1.) I have a 1915 Baby
Triumph motor cycle which is
constantly four-stroking; is this
harmful to the engine, and if so,
how am I to remedy it? (2.) I
can only obtain seventy odd miles to
the gallon; is this good enough? if not,
how can I get more mileage per
gallon? (3.) Please explain how to
time this engine.—W.H.McK.

(1.) It is not harmful to the engine in any way, but a common failing with all two-stroke engines. You might try the effect of lowering the petrol level slightly and a different plng. (2.) This would also improve your petrol consumption.
(3.) Time the engine in the following manner: Place the piston exactly on top of the stroke and connect up the magneto with the points just broken and the ignition lever fully retarded.

The Rule of the Road.

(1.) Does such a law as the following exist? "II a 'car is entering a main road from a by-road, the driver of that car must first stop his car and see that the main road is clear before entering it." (2.) Could any claim be made by a car on the main road if an accident happened, and this precaution was not taken by a car entering the main road 2—E.S.S.

(1.) While there is actually no law on the subject, it is understood that a car entering a main road has to take due precaution and give way to any vehicle proceeding along the main road. (2.) While we doubt if any claim could be made by the driver of a car travelling on a main road in the event of an accident having happened to him through the carclessness of anyone entering the main road from a side road, we think this fact would be duly taken into consideration in fayour of the former in a court of law.

Fixed or Variable Ignition?

I should be much obliged if you could give me some assistance in making an improvement in the running of my 1915 four-stroke 23 h.p. single-cylinder engine. I find that it does not run as well as other machines fitted with the same a metallic tapping noise, which appears to emanate from the region of the exhaust valve. This noise is apparent up to speeds of about 22 m.p.h., when it disappears. It can be heard when the engine is both hot and cold, and is always there when running under normal load. It is suggested that the noise is a common "knock," but I doubt this, as it has been there since the machine was new, and, moreover, I have just had the engine down for thorough overhanl and find the bearings in excellent condition. The engine seems fairly powerful, but does not climb hills as well as a similar machine. Personally, I am inclined to think that the ignition is too far advanced. Could you give me the correct timing for ordinary tour-ing? I should say that the magneto has fixed timing. Do you know if any attachment is made that can be fitted to make this variable ?-R.H.E.B.

Without actual inspection, it is impossible to diagnose the cause of the knocking. It may be due to excessive clearance at the

may be due to excess.

short valve tappet. You do not say if the machine against which you have compared your own, is fitted likewise with fixed ignition timing. Fixed timing is not nearly so satisfactory as variable, especially with machines which have only a small reserve of power; but we do not know of any method to the word of any method whereby you can

A SOVEREIGN'S WORTH OF PETROL.

2700 MILES

it would be as well to sell this and obtain a more up-to-date one of British manufacture. With this magneto the spark should be timed to occur 8 mm, before the top of the compression stroke. You can usually vary the timing with the type of magneto drive fitted to your engine, remembering that the position of the intermediate wheels has no effect.

Lightweight Queries.

(1.) My machine is a 2\frac{3}{4} h.p. 0.K.-J.A.P., but, unfortunately, the cylinder is cracked right at its base, although compression is excellent. Would it be necessary to fit a new piston if I fitted a new cylinder to have good compression? (2.) I wish to fit a gate change gear lever, as on the New Imperial, in place of the quadrant at present fitted. Is this practicable? (3.) What is the highest speed attained by a lightweight?—T.W.D.

(1.) Before going to the expense of a new cylinder, we should recommend that you submit it to a reliable firm of welders, as it may be possible to make an efficient repair. (2.) Not having the actual details of your machine before us, we regret that we are anable to suggest a fitment such as you require. (3.) On Brooklands, speeds exceeding 60 m.p.h. have been obtained by 2½ h.p. machines; on the road, however, 45 m.p.h. is an extremely good speed for a machine of this size.

Drip Feed Lubricator Trouble.

I should be glad if you could help me in the following matter: Machine, 1914 3½ b.p. Sunheam; Millford Skiff sidecar; Inbrication, Best and Lloyd feed. This lubrication works hadly, and sometimes not at all. I have had the machine down three times, and sent it once to the garage. It is perfectly clean, as is the tank. The oil is Gargoyle, as recommended. I fancy the cause is the ball and spring valve, between the pump and the drip feed; but I cannot see the reason for it, as it is quite clean. Any advice you can give me will be appreciated.—J.E.H.A. Faulty action of the non-return ball valve, between the pump and the drip feed, may cause trouble, also leakages round the top and base of the sight-feed glass. These are sometimes caused by the glass being cracked. Correct action of the pump depends largely upon the cleanliness and correct working of the pen-steel disc valve at the base of the sight-feed body.

S.C.

MOTOR (YCLE

High Petrol Consumption.

I have a 4 h.p. Douglas sidea true a 4 n.p. Doughas side outfit, new last month, fitted with an Amac carburetter (No. 28 jet), which does only 36 miles per gallon on No. 1 petrol. It has covered 217 miles up to the present without my having to open the tool bag. It runs beautifully at all the presed with the second true of the second with the second period to the second period tool bag. It runs beautifully at all speeds, and takes full air and throttle. It has so far taken all hills on top gear. The other day it went up a 1 in 5 gradient on full air and two-thirds throttle on top gear with a passenger. I tried a No. 26 jet, but it will not run on this. -It starts easily, and I rarely exceed twenty-five miles an hour.-N.E.E.

The trouble is probably due to the level of the petrol being too high and to a leak in the tank or petrol pipe. The best way in the tank or petrol pipe. The best way to lower the petrol level is to place an aluminium washer or two under the spring clip above the float.

Reliability of Dynamos.

I have ordered a new 8 h.p. outfit, and I am wondering whether I shall have a lighting dynamo fitted, as advertised in the makers' list. The dynamo is manufactured by a famous firm of lamp and accessories makers. Would you please tell me whether these things are yet looked on as reliable? Are they likely to last a good proportion of the motor cycle's "life"? Is there much trouble, except bulb trouble?-

You need have no fear as to the satisfactory performance of a dynamo light-ing set manufactured by one of the leading makers. The dynamo itself may easily prove to be more reliable than the motor cycle engine, but you may have a certain amount of trouble with the bulbs, unless the machine is a spring frame model, as the filaments suffer occasionally from vibration.

Firing on One Cylinder.

May I ask your advice con-cerning my 1914 6 h.p. twin? The trouble, whatever it is, came gradually. When starting out the engine would run all right. until it felt the load, when it would miss and nearly stop, the throttle having no effect for about 200 yards. After ing no effect for about 200 yards. After this it would go fairly well without further trouble. The symptoms got worse, until finally the front cylinder gave out completely, and after adjust-ments it would go on front and only badly on the back. Compression is good, it sparks well at the plugs on the cylinder, the valves are correctly timed, and the petrol passages are free. The magneto was recently overhauled. There is a flame from point to point across the contact breaker at all speeds, but varying in intensity with speed. Is that as it should be?—A.W.P.

The trouble you experience is evidently due to a magneto defect, as there should certainly be no sparking across the con-tact breaker points. We would suggest that you submit the magneto to a reliable firm of repairers. The symptoms also point to an air leak in the induction system.

Valve Timing.

I have an old pattern 5 h.p. a.i.v. twin motor cycle, with handle starter, Schebler carburetter, and Simms-Bosch magneto. Will you kindly give me the correct timing of valves for this machine?—L.H.

The correct timing of your engine is as follows: Inlet valves, automatic. Exhaust valve should be timed so that it just closes when the piston reaches the top dead centre of the exhaust stroke. Ignition should be timed to occur at top dead centre of the compression stroke: that is, one complete revolution after the exhaust valve has closed, the ignition control lever to be two-thirds retarded when timing.

THE NEXT STAGE!

MOTOR CYCLISTS interested in small or large cars should read

the forerunner of all motoring journals. Founded in 1895, it remains the largest and most successful automobile paper, and enjoys the greatest circulation. It is universally accepted as the representative British motoring journal.

All letters relating to advertisements should usto the number which is printed at the end of ich advertisement, and the date of the issue

t which it appeared.

The proprietors are not responsible for clerical r printers' errors, although every eare is taken savoid mistakes.

NUMBERED ADDRESSES.
For the convenience of advertisers, letters may be dressed to numbers at "The Motor Cycle" Office, hen this is desired, the sum of 6d, to defray the cost of hen this is desired, the sum of 6d, to defray the cost of gistration and to cover postage our epicks must be added the a levertisement charge, which must include the null Box one, c/o "The Motor Cycle." Only the number II appar in the advertisement. All replies should be dressed No. one, c/o "Motor Cycle." or, Tudor Street, C.4. Replies to Bax Number advertisements containing millumers should be sent by registered post, but in all such sets it is advisable to make use of the Deposit System. In the case of motor cycles offered for sale under a box immer, as it is unusual for these to be soid without first lag laspected by the intending purchaser, advertisers will sillitate business by embodying in their advertisements me mention of the district in which the machine ered may be seen and tried.

DEPOSIT SYSTEM.

PEOPOSIT SYSTEM.

Perons who besitate to seen innone to unknown persons by deal in perfect safety by availing themselves of our posit System. If the money be deposited with "The tor Cycle," both parties are advised of this receipt. The time allowed for a decision after receipt of the olds is three days, and if a sale is effected we remit the count to the seller, but, if not, we return the ornount count to the seller, but, if not, we return the ornount riage one way. For all transactions up to f. to, a posit fee of 1- is charged; on transactions over f. to a under f. f. o., To; and on all transactions ef. f. o., \$\frac{1}{2} \text{.} \text{.} And the green and inney to the first of the country of the co irous, but have not advised us to that effect.

SPECIAL NOTE.

Readers who reply to advertisements and receive no wer to their enquiries are requested to regard the may on an indication that the goods of courtised have sady been disposed of. Advertisers often receive so my conquiries that it is quite impossible to reply to the one by post.

You had better ORDER A NEW MOTOR CYCLE NOW-

il you are anxious to secure a machine in time for the coming season's riding. As everyone interested in motor cycling knows, there are exceptional difficulties handicapping the trade just at present. It is by no means certain that you will be able to obtain the new machine of your choice without some delay, for the effects of the recent moulders' strike and of transition difficulties generally are still with us. But of one thing you can be certain, and that is that WAUCHOPE'S can give you the best possible service, and can offer you exceptional facilities for securing the new machine of your choice at the earliest possible moment.

If your circumstances are such that any period of delay is impossible, we should advise you to

BUY A SECOND-HAND MACHINE

At our well-known from our stock. premises in Shoe Lane we have always an exceptional range of Second-hand Motor Cycles, Sidecar Combinations, Light Cars Motor Scooters, and every type of machine for economical motoring. Although it is very difficult just now for the average buyer to find a stock of second-hand machines which offers him a variety of choice, this facility exists at WAUCHOPE'S. Everyone requiring a mount is cordially invited to come to Shoe Lane and make a selection

There are many scenes of great natural beauty in Britain that are visited but little because they are so far from the beaten track and difficult to reach.

A Motor Cycle brings them very near, and makes the journey to them easy, enjoyable, and comparatively inexpensive, provided your mount is a thoroughly reliable one, such as you will get by placing your order with

The magnificent performance of the winning Scott team in the

Paris - Nice Trial

makes the following extract from our advertisement of March 3rd, 1914, of particular interest :-

This is what a customer wrote to us after a lengthy tour in France:-

"IT'S PERFECTLY WONDERFUL "HOW SMALL A MACHINE AS "THE SCOTT CAN BE USED "FOR REALLY ROUGH TOUR-"ING. % . . THE SCOTT WAS "ADMIRED WHEREVER IT "WAS SEEN. . . . BUT "REALLY, IT IS WHEN ONE "COMES TO HILL CLIMBING "(WITH A PASSENGER IN THE "SIDECAR) THAT THE SCOTT "SEEMS TO ENTER INTO THE "SPIRIT OF THE THING, AND "BEFORE YOU KNOW WHERE "YOU ARE, YOU ARE AT THE "TOP OF THE HILL. THANKS "FOR PROVIDING US WITH "THE MOST DELIGHTFUL "SPORT WE HAVE YET "ENJOYED."

The 'SCOTT'

FOR LUXURIOUS TOURING.

BUSINESS METHODS

were laid down by the Layton Garages twenty years ago, with INTEGRITY as a keynote.

The following extracts from letters received from satisfied customers go to prove that we do try to

LIVE UP TO OUR IDEALS

Durham, :-2-1920.
"I am very pleased with your straight forward business methods and you courteous attention to postal clients."

Eltham, S.E.9, 11-2-1920.
"Hisrefreshing to find a firm anxious to take trouble on one's beholt. It is of course: the proper way to conduct successful and continuous business, bud, unfortunately, so many firms seem to our look the fact now-a-days Major—

Penrhyndendraeth, 19-2-1920.
"It has been a pleasure to do business with you and I sincerely thank you for your court ous and even generous treatment, which, I can assure you, was greatly appreciated by——".

We will treat YOUR enquiry in the same way.

Win, Tie, or Wrangle!

T is with regret that we notice a growing tendency to criticise the rules governing a competition after the event has taken place. Lately there has been far too much complaint concerning results; and, whilst we

admit that in certain cases criticism has been warranted, yet it is much better to accept results in a sportsmanlike way, provided the conditions

of the trial have been observed.

After all, the majority of club officials are honorary workers, and willingly give their time for the benefit of the pastime. If their commendable efforts receive such scant appreciation as has been the case of late, the inevitable result will be declining interest. It is clear that every competitor cannot win. Mistakes have been made, and will, doubtless, again be made. Disappointed riders who may have seen some, trivial transgression of, or weak point in, the rules are, we fear, too apt to put forward their protests. A little more constructive and helpful criticism would show a genuine desire to improve existing conditions, and we have yet to hear of a body unwilling to consider and adopt good advice in regard to its future events. Destructive criticism, however, gives a totally wrong impression, reduces the value of an award, and is disheartening to those who are doing their best.

Moreover, it is a very easy matter to point out the deficiencies of this or that regulation, especially when the trial is over, and results have shown up an unexpected weakness; but it is a very different thing to suggest rules which will give general satisfaction and stand the test of time. Competitors often neglect one rule, viz., that which requires then to note the stops of other riders. They do this from a mistaken idea that it is unsporting, but a moment's reflection will show that this point of view is a wrong one, for the carrying out of this rule will do no harm to the honest rider, and the dishonest one deserves no sympathy.

We are constrained to pen these notes, since in many quarters the feeling is growing that a certain section of competition riders show no conciliatory attitude, their one object being to win or know the reason why. A little more of the true British sportsmanship would be welcome in the motor cycling competition world just now, and we sincerely hope that we may not find it necessary to revert to this subject again. The last thing a competitor should be accused of is the win, tie, or wrangle policy.

The Tourist Trophy Races.

'ANY differences of opinion exist as to the running of the 1920 Tourist Trophy Races, and we have from time to time given expression to the views of the trade. On the whole, there is no doubt that the public will be greatly disappointed if the race does not take place, and their feelings will be shared by a large proportion of the Young firms in particular are eager to win their spurs, and what better chance have they than in the most important sporting event of the year?

In this connection, we would draw attention to a letter which we have received from Mr. Frank Whitworth, and which is published in

another part of this issue.

Mr. Whitworth suggests that powerful clubs should each nominate a rider and pay at least part of his expenses, so that a representative entry would be secured. This scheme would, of course, create enormous interest in the districts whose clubs decided to support the idea, and would add to the enthusiasm which is always displayed in this classic event.

In proof that the idea is practicable, we would point out that the Coventry and Warwickshire Motor Club nominated Mr. R. Ayton to represent them in the year 1907, but it is obvious that, to derive the fullest benefit from the scheme, each district of the country should

be represented:

Novel Engines.

WHOLE crop of rumours are afoot anent novel experimental engines now on the stocks with a view to ultimate production. One such engine -the Redrup three-cylinder radial-was fully described in a recent issue. Others, of which word has reached me, include a rotary, a four-cylinder flat twin, another radial, and quite a bevy of freak two-strokes. These engines are apparently inspired by two rival policies. On the one hand, some inventors count on mere novelty as a justification, knowing that there are a select number of buyers who will purchase anything which Innovation for the sake of innovation serves no useful purpose, and usually results in a heavy loss to all concerned. On the other hand, engineers of a more practical bent adopt novelty in their quest for greater efficiency. Thus, the Douglas gave us a revving engine free from vibration. Scott gave us the torque of a four-cylinder with the simplicity of a twin (and the thirst of an Irish navvy). The baby two-stroke gave us a cheap, simple featherweight engine with a pleasant exhaust note (and an insatiable appetite for sparking plugs). The men who are now looking for a market would in some cases do well to tackle the problem from the other end, and ask not "In what stunt can we try to work up interest?" but rather, "What improvements in engines are wanted?" In other words, I should tentatively regard a flat twin four-cylinder as a somewhat foolish stunt. The twin of that ilk is quite sufficiently difficult to house, while a four-cylinder of the type gives improvements in torque and balance which are not specially necessary at the cost of extra inaccessibility which is wholly undesirable. On the other hand, machines like the Scott, Douglas, and baby two-stroke were all planned to meet felt and known wants.

Our Known Wants.

N the first place—I definitely put this first—we could do with a substitute for the 1,000 c.c. They are jolly good nowadays, and But it is admitted that we get better every year. only use them on bicycles and cycle cars because we cannot get better balanced engines of better torque without accepting serious disadvantages. The flat twin is a better engine than the V twin-but The four-cylinder engine is it is difficult to house. better than the V twin, but it is expensive and complicated by comparison. In the second place, I should guess that we need an engine which possesses the simplicity, reliability, and durability of the 500 c.c. single-cylinder, plus really good balance and torque. The Scott was an effort to provide this ideal, and, though it has won a good following, it has never threatened the one-lung four-stroke because of its petrol consumption. In the third place, we want an ideal engine for lightweights. The baby two-stroke carbonises too fast, is too sensitive to lubrication carburation, and vibrates at high speeds. The four-stroke does not maintain its tune well enoth and vibrates at revs. It is surely significant la none of the current rumours about novel en There is a loof trench on any of these fields. conscientious detail work being done in all directions, but we still wait for revolutionary anno ce Is it because we have tapped the litt Anyhow, the genius who can strike oil in an of these respects should make pots of money, the gentleman who evolves a sixteen-stroke rotary all its shaft running one way and the cylinders ruling the other will be fobbed off with a page not in the technical press and two files full of bills.

Similarly, Bicycles?

EXPERIENCE similar feelings with regs to many of the "new" motor cycles which making their débuts. They evince no fundau national des la contraction of the contracti departures from familiar lines. One forms thim pression that somebody has capital lying idle it deserted munition factory on his hands, and that temporary-very strictly temporary-under-procession has created an excessive though transient dian for any old sort of motor bicycle. On the other hand, there is an undeniable demand for motor bycle This "ideal" is extremely com of an ideal type. posite, and, if we venture to analyse it, boils low into separate demands for greater comfort, cleanliness, lower weights, lesser prices, and efficiency of the sort called technical. How may the débutantes really offer us one of these buts How many of them can boast definite advares all these directions? To rechristen the two lives already identified, one is to evolve a sellable media the other is to produce the best seller in i cla or in any class. When I set most of the new raduc against older lines, I feel very much as if I an colle upon to decide between a Martini and a she and bitter-I am perfectly content to take what is going and do not much care which it is,

New Plating.

THE other day I took delivery of a new months bicycle. This incident led to three people had bicycle. This incident led to three peor be out of temper by nightfall: myself, m pro flapper cousin, and the cook. Thusly. Afer Armistice I made a resolution that, as a than offer for being demobbed, I would in future keep n me cycles clean. The fever lasted just as long a it to me to give up saying "Quite!" every time open my mouth. Nevertheless, as the resolution ad been formally retracted, I never smeared all the bits of the machine with vaseline, as my pre-vr h was. So when I sold it the other day, my priter dream was shattered by a brusque buyer, who not

Occasional Comments,-

off many shekels, on the ground that the plating reminded him of tangerines. Consequently, when the 1920 steed arrived, I reverted to type, and set about greasing it; nor will it ever be cleaned till selling day comes, when the accumulated filth will peel off with the underlying skin of grease. I got out a tin of Prices' hub lubricant, in the absence of vaseline. This stuff being of a curdy consistency, I set it on the kitchen stove before I visited the editorial sanctum. My matutinal wigging was unusually prolonged, and I forgot about the tin. When I revisited the kitchen, the tin had gaped at the joints, and the cook was in (Temper No. 1.) I appeased this buxom tears. (Temper No. 1.7 1 appearsed this buxon damsel suitably, and began looking for a brush. By the mercy of Providence; my pretty flapper cousin attends the Slade school (all my brushes have road grit or goldsize on them). I found a lovely fat fellow with a perfect wad of camel's-hair by her palette. Then I commenced operations. It took me rather over the most to appear to the mechanical that had been a fellow to appear to the mechanical that the platfol parts of the mechanical transfer. an hour to anoint all the plated parts of the machine, from which you may guess their number, areas, and inaccessibility. (Temper No. 2.) Then my flapper cousin came in. How could I tell the camel-hair fellow was a neverwozzer, Hun-made, utterly irreplaceable, and worth about 10s. (Temper No. 3.) I am now treated with marked hauteur, and see it will take a revue and a dinner to restore me to her good graces. As the new jigger has quite cleaned me out, this diplomatic outlay will land me in temper No. 4.

SOME fools go about the world proclaiming that motor cycling is an expensive hobby. Now, nobody has owned more thoroughly bad motor cycles than I have; I entered the hobby twenty years ugo, and I am cursed with a simple and trustful nature, which puts me at the mercy of any glib sales manager. Severtheless, even when one motor cycles under such a heavy handicap, the sport is a positive economy compared with other hobbies I could name. Take hotography, for example. We generally fall under its pell during our first serious love affair. Photographs of her which grace the mantelpieces of aunts and cusins—ugh, even male cousins—are not good enough. We must have pictures of her of which nobody can assessed duplicates. After a while we find that the

Expensive Hobbies.

camera does not produce pictures which are worthy of her peerless beauty. We buy better cameras. We find we are spending too much. Jones, it is said, makes his baccy money by selling snaps to the Daily Mail. We resolve to do ditto. We discover that a \mathcal{L}_{+0} reflex camera with a £20 lens is desirable for this purpose. We get it. So it goes on. Gardening is just as bad. Tulip bulbs are 3d. each, but £6 10s. per 1,000: it is obviously an economy to buy 1,000; we do so. We discover that standard apples are back numbers. We burn them during the coal shortage, and order cordons. It turns out that you require about 3,000 cordons to replace about three dozen standards: also that whereas cordons are listed at 1s. each in the pre-war catalogue which inspired us to burn our acre of standard trees, they have now risen to 5s. apiece. I make no charge for all this information, which is simply invaluable to all married motor cyclists.

Now Mrs. Ixion often grumbles about my bicyclesthe number of them, the noise they make, their dirtiness, the company they get me into, the money I spend on them, etc. But she has also lurid memories of my camera days, and eke of a brief spell of gardening fever which once possessed me. So when I want a new motor cycle, I do not say, "My dear, Billy Wells writes to say he can do me a new 7-9 h.p. Indian next week." Oh no. I remark casually that motoring in winter is a mug's game, and that I think I shall make lantern slides; or that it is absurd to pay od. per lb. for sour cooking apples, and that I shall rent a bit of ground and grow my own next year. There comes into her eyes that half-timid, half-cunning look which wives wear when they think they are managing you. says nothing at the time. At breakfast next morning she murmurs, "Darling, you do not seem to have had a new motor bicycle lately. Are you hard up? If so, I have still a few pounds left of Uncle Joe's little legacy, and you have been rather a dear lately." Then I write to Billy Wells. Do not overdo it brethren. It is only necessary to coquet with photography or gardening just long enough to show them a husband may have worse faults than motor cycling. As detailed tips, I specially recommend a whole-plate reflex for photography on this system, and orchids as the best phase of the gardening stunt; they cost pounds, and they do not come into flower for ten years, if at all.

LAST WEEK'S INTER-'VARSITY HILL-CLIMB. A Douglas owner at the start of the 350 c c. class.

MOTOR (YCLE

PROS AND CONS OF

VARIOUS ENGINE DESIGNS.

By "CHINOOK."

Some Notes which will Help the Novice to a Better Realisation of the Difficulties that beset the Designer.

HE object of the following notes is to show in a clear and not too tedious manner the advantages and disadvantages of various engine designs-where some fall short and others gain-and to detail as clearly as possible exactly what is meant by the various technical terms the novice is apt to meet. It is not written for the veteran; he knows what he wants, and generally does not get it, but it is often a difficult matter for the novice to decide which type of engine he really favours. He rather likes the flat twin; the noise it makes fascinates him, and he likes the look of the compression taps, but a certain mystery hovers around this or some other type of engine. He believes that some inherent difficulty lies in the way of its perfection, and, groping in the darkness, he probably falls back on the good "old single-cylinder as a safeguard. Possibly the choice is a wise one, but a little explanation would clear the atmosphere for him.

If the flat twin, or the 90°, or one type or another is superior to all the rest, why is it not universally adopted? What really are the advantages of an outside flywheel? Does it set up a gyroscopic effect? No, it does not; so we may as well squelch that right away. Are side-by-side or overhead valves preferable? These and many other questions hinder the choice of the man who is anxious to buy, but who possesses too large an assortment of motor cycling friends to arrive at anything like an accurate opinion

of his own.

The Flat Twin.

Let us discuss the flat twin first, as it seems the fashionable thing to do. There is a prevalent opinion that this design lends itself only to engines of small size, since, for a long time, no one was successful in producing a large flat twin. Such difficulties as existed are now removed, and some aero engines of this type are larger than we are ever likely to require for motor cycle propulsion. It may be some time ere large flat twins appear in any numbers on the road, but. unless the present type of petrol engine is superseded, they will assuredly come.

The great advantages of the flat twin are: evenly distributed power impulses, that is, one firing stroke per revolution, and good balance, which means, of course, little or no vibration. These two qualifications are vitally important in a motor cycle engine. The even firing or good torque is an insurance against skidding, against excessive tyre and transmission wear

-in fact, it renders possible a machine which is not only comfortable to ride, but which can be maintained at a minimum of cost.

A well-balanced engine-that is, a vibrationless engine-is an advantage, in that it renders the machine more comfortable and durable. It does not shake itself and the rider to bits; frame breakages are less likely to occur—or, rather, there is less excuse for them when they do occur; and one is not troubled to the same extent by things shaking loose. The true delicacies of motion cannot be felt unless one is riding a well-balanced engine, and it is on account of these two distinguishing virtues that the flat twin has been selected by many as a highly desirable type of motor cycle unit. Other engines may possess one of the virtues, but not the other. The combination of the two is difficult to arrive at, and, though we arrived a it years ago in the flat twin, there are, or were, certain difficulties in the design which long held it back as : practical motor cycle engine. Probably the greates obstacle in the pathway of its success was the sweeping and universal success of the single-cylinder.

Some Obstacles.

The Douglas, of course, stands out as the pionee flat twin. Its makers struck a good system of oiling and were content to concentrate upon a small engine till it reached a pitch whereby it could compete favourably with engines of much greater cubic

capacity.

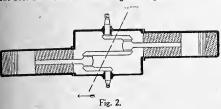

Oiling difficulties were at the root of most of the flat twin failures for many years. Mechanical lubri cation was not very far advanced, and splash feed failed because the back cylinder, no matter how it was baffled, insisted on taking more than its share of the oil. How this happened is clearly shown in fig. 1 By the time the cranks had reached the top of the stroke, they had flung off the bulk of their oil; mos of it had gone into the back cylinder, and there was precious little left for the front. When there is only one cylinder, the oil level in the crank case can be regulated to meet the requirements of that one cylinder; but when there are two, they must be oiled

equally, or one wi'l overheat and wear much more rapidly than the other.

To-day there are differen

The Pros and Cons of Various Engine Designs .-

systems of oiling in use on flat twin engines, most of them successful, some more successful than others, and the general tendency is to eliminate splash feed, and employ gravity or pump feed. Splash feed was highly successful with the single-cylinder, and on account of its simplicity accounted largely for the success of that engine, but its limit of efficiency is reached with the 60° V twin. With the 90° twin it is not satisfactory; with the flat twin it may be written off as impossible, unless very elaborate additions be made.

The Balance of the Flat Twin.

Looking at the bird's-eye section of the flat twin engine (fig. 2), we shall see at once that the balance is not perfect. Owing to the necessity for having the cylinders offset, so that the cranks work, as it were, in opposite directions, and so balance each other, we obtain a rocking motion, or what is technically termed a "couple." When the engine reaches the position shown in the sketch, this rocking motion is tending to throw the whole unit in the direction indicated by the arrows, and, at the bottom of the stroke, it is tending to throw the unit in the opposite direction, and thus it will readily be seen that, with the engine revolving at high speed, these alternating forces are calculated to set up considerable vibration: otherwise the balance of the engine is perfect.

Now, in practice this rocking motion is cut down to minimum by means of bob-weights, and by keeping he big end bearings as narrow as efficiency permits, to that the cylinders need be very little offset. Fig. 3 hows the bob-weights and how their presence opposes he rocking motion set up by the reciprocating parts. in effect they set up a couple of their own in the poposite direction. This renders the balance of the lat twin almost, but not quite, perfect, the imperfecion being due to the fact that the couple set up by he reciprocating parts has a maximum point each halfevolution, whereas the couple set up by the bobreights is constant. The imperfection can be still urther reduced by the employment of very light istons.

Having arrived so far, manufacturers were up against ne difficulty of devising a suitable type of big end earing, narrow enough to reduce the couple, and hich could, in some way, be threaded on to the crank as to retain the strength of the one-piece bearing. oller bearings, or some efficient type of split bearing, ere the usual remedy, most manufacturers favouring ie roller bearing, since it requires very little oil.

V Twins.

Just as it is possible to balance a single-cylinder weighting the flywheel opposite the crank pin, so it is possible to balance any V twin having its big end bearings together. None of these engines, however, are perfectly balanced, and the ordinary V twin survived so well because its torque and balance were slightly better than in the single. The wider the angle at which the cylinders are set the greater become the natural lubricating difficulties, and up to 90° the better becomes the balance, but the worse becomes the

This brings us to the 90° twin, which in many respects is a very desirable type of engine. It can be balanced so that it closely rivals the flat twin in this respect; but its torque, though better than the single, is worse than the everyday narrow angle V twin. It has no couple, and these things being so, the torque does not matter much.

Other Designs.

Dealing in passing with other four-stroke designs, the following facts may be set down. The twocylinder side-by-side old Werner type fails because we must sacrifice either its balance for its torque or its torque for its balance. In order to obtain good balance, we must have a two-throw crank, so that one piston is down when the other is up, in which case we get two explosions in one revolution and none in the next. If the pistons move up and down in unison, we can have an explosion each revolution, but the balance of the engine is no better than in a single. The Scott engine is a two-stroke, and thus the firing impulses are the same as the four-cylinder, i.e., the torque is constant; but with this type of engine the couple is more pronounced than with the flat twin, owing to its greater width.

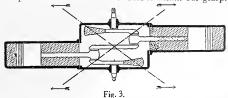

In the three-cylinder four-stroke we have very good

balance and excellent torque. It is a shorter engine than the four-cylinder, and could be lubricated by

the same simple methods.

The four-cylinder presents no drawbacks other than its length. Its complication has stood in its way, and many manufacturers have experienced difficulty in making very small air-cooled engines that would retain their power. These difficulties and handicaps are now removed, and ere long we shall probably see on the road several four-cylinder machines hailing from good factories.

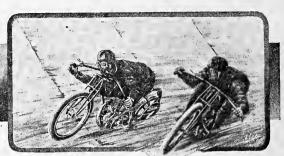

The foregoing may serve to show some of the difficulties which lie in the pathway of engine designers, and may further serve to illustrate the fact that, though the types of engines with which we are most familiar may possess inherent defects which prevent their being ideal, they have flourished because their manufacture presents the fewest difficulties. To-day the difficulties which have rendered the more desirable types of engines impracticable are chiefly removed, and there is no reason why we should have engines possessing insuperable defects when the ideal is within our grasp.

FIRST POST-WAR RACES AT BROOKLANDS.

Easter Monday Event for Speedmen.

British Motor Cycle Racing Club Meeting.

Sprint Races fo Two-strokes and 350 c.c., 500 c and 1,000 c.c. Four-strokes.

Handicaps for Solo and Sided Machines.

WE understand that Brooklands will be open for the first time since the war on Thursday, April 1st. The season proper will open with the first B.M.C.R.C. meeting, held since the beginning of the war, exclusive of the two inter-service meetings held in 1915, when only part of the track was available. We give below the programme of the first meeting to be organised by the British Motor Cycle Racing Club since peace was signed.

EVENT 1. 2 p.m. THE VICTORY HANDICAP (8 miles 842 yards).—For solo motor cycles of

(8 miles 842 yards).—For solo motor cycles of any class.

EVENT 2. 2.50 p.m. THE SHORT ESSEX EASTER HANDICAP (5 miles 1,339 yards.)

—For motor cars of any class entered and driven by a member of the Essex Motor Club.

EVENT 3. 2.50 p.m. THE TWO-STROKE SPRINT BAOB (5 miles 76 yards).—For motor cycles with two-stroke engines not exceeding 350 c.c.

EVENT 4. 3.10 p.m. THE 350 c.c. SPRINT RACE (3 miles 76 yards).—For motor cycles with engines not exceeding 350 c.c.

with engines not exceeding 500 c.c. SPRINT RACE (3 miles 76 yards).—For motor cycles with engines not exceeding 500 c.c. SPRINT EVENT 6. 4 p.m. THE LONG ESSEX EASTER HANDIGAP (6 miles 842 yards).—For motor cars of any class-entered and driven by a member of the Essex Mctor Cho.

member of the Essex Motor Clob.
EVENT 7. 4.50 p.m. THE 1,000 c.c. SPRINT
RAOE (3 miles 76 yards).—For motor cycles
with engices not exceeding 1,000 c.c.
EVENT 8. 4.50 p.m. THE THREE-WHEELED
HANDIGAP (8 miles 842 yards).—For three
wheeled cars and motor cycles with sidecars,
of any class.

CONDITIONS.

1. For all particulars as to events Nos. 2 and 6, application should be made to Mr. A. G. Reynolds, 25, Stepney Green, E.I. 2. All events except Nos. 2 and 6 are open to members of the B.M.C.R.C. only.

3. Entry Iess: Events 1 and 8, 5s. each; Events 3, 4, 5, and 7, 35, 6d. each.

4. Prizes: All events except 2 and 6-First r club plaque; second prize, silver medal; third r bronze medal.

5. Competitors' motor cycles must be fitted the regulation circulor number plates. These p may be obtained from the bon. secretary. 6. If the number of estracts in ony words, and exceed by three the number of carriers and was any be reduced in number of condings, wands may be reduced in number of condings. bers free.

NOTICE TO MEMBERS AND CANDIDA FOR MEMBERSHIP.

The entrance fee of 10s, 6d, and annual subtion of \$2.2s, for membership of the B.M.C less not been raised, but will remain as state the first 250 members only joining or rejoin control of the state of the club as from Jonury 1st, 1920. Promembers will not be entitled to rejuin will paying an entrance fee unless the subscription the current year be paid before March 31st, when the control of the subscription of the

THE "ROSS" TROPHY.

The A.C.U. Seventeenth Annual Report.

WE are in receipt of an advance copy of the seventeenth annual report of the seventeenth annual report of the Auto Cycle Union, which will be placed before members at the annual general meeting to be held at the First Avenue Hotel, High Holborn, London, W.C., on Saturday next, at

3 p.m.
One of the most noteworthy milestones in the Union's history is the announcement made at the annual dinner by the President that H.R.H. Prince Albert had graciously consented to become a patron of the Union.

In the ten months which ended on December 31st last, 12,609 new members joined at the Union's new rate, and the membership is now considerable,

LEGISLATION .- A tremendous amount of work has been done in fighting the new proposed legislation, and every possible effort has been made to safeguard sible effort has been made to safeguard the interests of motor cyclists as a whole. The Auto Cycle Union is, of course, represented on the Motor Legis-lation Committee. The supply of motor fuel at reasonable rates continues to enruer at reasonable rates continues to engage the careful attention of the Union's representatives on the Motor Legislation Committee, while the equally important subjects of the lighting and taxation of motor vehicles have been very exhaustively dealt with, but the conclusions reached thereon cannot as yet be announced.

Touring Department.-During last six months of the year 1919 no fewer than 3,641 applications for routes were dealt with, and the department has been busily engaged in revising the appoint-ment of hotels and repairers. During the course of the year over 700 establishments have been visited by the Union's representatives. The appointment of tea houses where members may obtain refreshment at reasonable rates is now being considered, while the Consular ser-vice established during last year has proved of considerable value and assistance to members.

Technical Advice.

The Engineering and Technical Department has been extremely busy in giving members advice regarding the purchase of second-hand machines and reporting on their condition, and the department's eatalogue library has been found a useful addition to the facilities provided for members requiring new motor cycles.

The Union is represented on the Advisory Committee to the National Benzole Association and on the Pancl on Benzole convened by the British Stan-dards Association. In its capacity as a Society of Encouragement the Union has welcomed the formation under Govern-ment auspices of the British Motor Cycle and Lightweight Car Research Association.

In November last the departs In November last the departy officially observed an End-to-end tris the O.K. Junior motor cycle, and particular attention of both man turers and users is called to the valu-such certified trials. In the opinion the department, the motor cycle is in a transitional stage of developm. in a transitional stage of developmit is still too heavy, too noisy too experience of the stage The Insurance Department has do

large amount of business during the st

LEGAL DEPARTMENT .- The calls the Union's solicitors under the legal, defence scheme have increased in siderably, and much useful work been done, many members being se needless expense and trouble when of have been forced to come into court with the Law.

The report concludes with, it is the regretted, an obituary notice of the to Mr. J. R. Nesbit, and also of the to Sir John Alcock, a keen motor cyclistad sportsman, and a life member of the A.C.U.

A New Cycle Attachment.

A Light Two-stroke designed to fit any Standard Pedal

FROM the earliest days of motor cycles, designers have attempted to evolve lightweight engines which might be fitted to pedal cycles without alteration to the existing cycle frame. We can well remember riding one of these

an Ixion two-stroke with friction drive on the front tyre-some fourteen or fifteen years ago.

Recently there has been a great revival in cycle attachments, owing to the fact that improved design has rendered tiny engines more efficient, and also owing to the great demand for a really

owing to the great demand for a really light motor-assisted cycle.

Last week we were enabled to try a new machine of this type, which is being manufactured by the Power Cycle Engineering Co., of Shirley, Birmingham.

The power unit consists of a little two-stroke engine of 51 mm. bore and stroke (104 c.c. capacity), which drives a countershaft by chain. A second chain transmits the power to the rear wheel, the total reduction being 10 to 1.

One of the main features of the little

One of the main features of the little outfit is the fact that it is applicable to men's pedal cycles without structural

The attachment fitted to a pedal cycle.

alteration, as the rear wheel sprocket is clamped to the spokes close up to the hub.

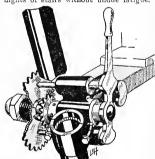

MOTOR (YCLE

In the experimental model illustrated, the chains are exposed, and a dog clutch is incorporated with the countershaft, so that in case of engine trouble the cycle may be pedalled in the normal manner. We are informed, however, that pro-duction machines will be

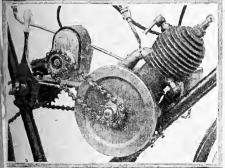

fitted with chain guards, a friction clutch, and a cush drive, thus providing a smoother running mount. A Runbaken mounted behind the sloping cylinder, and is driven by a chain outside the fly-wheel.

countershaft is provided with an eccentric chain adjustment, and the complete unit weighs only 23 lb. A small tubular tank attached to the top tube contains petrol, and lubrication is by hand pump to the main bear-ings and cylinder walls. The price of the com-plete unit is expected to be 21 guineas, and it can be fitted to a cycle in about half an hour.

To the motor cyclist such a machine appeals but little, but there must be many who already possess cycles and would motor if they could. To such the margin in price between a genuine lightweight motor cycle and the cycle attachment will make a great difference. attachment will make a great difference. If we may criticise, we would suggest that a girder fork is desirable, even though the speed of the machine is not intended to be high. In regard to weight, we can personally testify that we have carried the machine up two flights of stairs without undue fatigue.

The countershaft, with free engine device. The dogs are shown out of engagement.

Flywheel side of the auxiliary unit, showing the method of attaching to frame.

NEXT WEEK'S SPRING NUMBER.

HIS is the season of the year when many potential buyers of motor cycles seriously consider their reirements and the type of machine most table to meet them. Since Olympiaring the winter months that are, for
ther year, a thing of the past—the
tor cyclist may have almost decided on several different machines, but the le has come when a decision must be de. Next week's issue will be of aluable assistance in this direction, , in addition to containing many new

features of a sensible nature, a Buyer's Gnide will be included. This guide will give illustrations and specifications of 120 makes of motor cycles—one for every thousand of The Motor Cycle's circula-

Besides serving as a guide to those about to purchase a new machine, the guide will be of interest to all who follow the development of the motor cycle, and will be preserved as a means of reference by all who ride, design, make and sell

For those contemplating a week-end run, a large number of routes are sug-gested. This feature will give short tours from important centres.

Among the many other special articles there will be some which will be of great assistance to the majority of riders at this time of the year; others which will appeal to lady drivers and passengers. Every article has been written by an expert motor cyclist, and will be pro-

fusely illustrated. The price of this issue will be threepence as usual.

THE ETA CARBURETTER.

An Instrument in which the Variation of the Petrol Supply is Compensated in a Novel Manner.

THE Eta carburetter is a motor cycle carburetter designed on thoroughly scientific lines. From our examination of the only model at present in existence, which was made by hand, and existence, which was made by hand, and is of crude external finish, it promises exceedingly well. We understand that arrangements are being made to manufacture this instrument of die castings in quantities. It is the invention of Mr. E. Warner Parr, Loampit Hill House, Lewisham, London, S.E.13, who has studied the question of carburation with extreme care, and has delved deeply into the depths of scientific carburetter design; so much so that he claims that

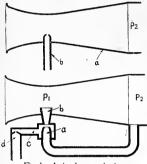

Fig. 1.-A simple venturi tube. Fig. 2.-Diagrammatic view of the Eta principle.

the Eta carburetter cannot possibly give an inaccurate mixture under any condi-tions whatsoever, which is a fairly tall claim, and shows that he has great con-fidence in the instrument. He also claims from 20 to 50% increase of power over other carburetters, and 20 to 100% greater economy.

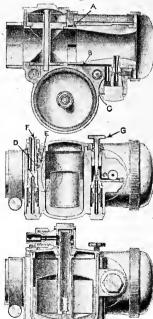

Automatic Action.

The diagrammatic representation of a simple venturi and jet is given to show the idea on which the Eta carburetter works. An instrument of the type of that shown in fig. 1 should theoretically give a perfectly uniform mixture at any speed, but in practice it is found that as the speed increases the mixture becomes richer. In contrast with this simple design is shown a diagrammatic illustration (fig. 2) of the Eta carburetter. At a is an air jet, and at b there ter. At a is an air jet, and at o there is an expansion cone, the two together forming an injector, a peculiarity of which is that the suction it creates at point c is exactly proportional to the pressure difference between P, and P, but owing to friction and other causes the pressure at P2 is less than atmospheric, and the decrease in pressure is strictly proportional to the increase of vacuum at P₁ over that indicated by theory; but as the suction at c is proportional to the pressure difference between P₁ and P₂ and P₃ and P₄ and P₄ and P₅ portunal to the pressure timerence between P_1 and P_2 , and as the reduction in pressure at P_2 is proportional to the variation at P_1 , the suction at c is inversely proportional to the variation

Now it is obvious that the total suction on the jet d is the sum of the actual suction at the throat P_1 and the suction suction at the throat r, and the suction at the thijector, but as the suction at the throat is equal to the theoretical suction plus the variation, and the suction due to the injector is equal to the theoretical suction minus the same variance. tion, the variation cancels itself, and the actual suction on the fuel is exactly what is required theoretically to give a perfect mixture, and this holds good at any speed. It is therefore claimed that the variation of the venturi is corrected. Moreover, the Eta carburetter is said to ensure complete atomisation.

Means of Adjustment.

It will be noticed that the mixture enters through the cone b, having drawn its air at the orifice at P_{α} , while additionally P_{α} , while additional P_{α} , while P_{α} , whi tional air enters by the ordinary passage at the end of the venturi. With this carburetter more so than with others, an air leak is likely to upset the mixture seriously, especially at slow speeds, and in consequence a pilot jet is employed, which is shown in fig. 4, on the left-hand

(Top) Sectional plan, showing injector, separator, and throttle (Middle) Vertical part section, showing main and pilot jets (Bottom) Section through float chamber

side of the illustration. It actually consists of a very small carburetter designed sists of a very small carburetter designet to supply a small quantity of very rid mixture through the hole D in the bod and the corresponding hole E in throttle. If the throttle has been opened more than 30°, the relative positions of the holes in the throttle and hody are sarranged that the pilot is completely out. This opening will give a speed o about ten miles per hour on the level and at any speed above this the pilot idisconnected from the engine, and can have no effect upon the mixture, which is then supplied entirely by the injector

as then supplied entirely by the injector
As different engines have naturall
different air leaks, the adjustable diffuse F is provided. Screwing down weaken mixture, and unscrewing i strengthens it.

Exterior view of the Eta carburetter.

takes the place of a jet, is provided with an adjustable needle G. This control the strength of the mixture through the whole range, except that covered by the pilot jet, and is employed to adjust the carburetter to suit the fuel in use. The fuel enters the float chamber (see

fig. 5) through a union adjustable to sui the motor cycle to which the carburette is fitted. It then passes through the is noted. It then passes through the float chamber filter, which is in the centre tube, and past the float chambe fleedle valve at the base of the tube. In addition to this, in fig. 4, it will be seen that there are gauzes at the bas of each jet, so that the fuel is filtered twice. The air supplied to the injector is taken from the separator A, fig. ? which is a sectional plan of the instrument, through the channel B in the venturi, to the port C in the body.

On the Road.

On the Road.

The Eta carburetter, which was demonstrated to us, was fitted to an eyceedingly old model 3½ h.p. Singer mote and sidecar. It started easily, garapid acceleration and perfect flexibility, ample power was developed on hills, an on the level the pick-up was remarkably good, and it only remains to say the the carburetter worked perfectly on the lold Singer, and for this reason we fe sure that it has every possibility success. Mr. Parr assures us that the consumption is remarkably good, and a 3½ h.p. machine, with sidecar, the average consumption figure have been obtained. have been obtained.

N ILLUMINATED REAR PLATE.

LTHOUGH there are a large number of motor cyclists who do not favour an illuminated rear plate for reasons are obvious, there are quite as many see no reason why their numbers ald not be clearly legible. Consider-the anti-motorist attitude of the police some quarters, the former view is saps justifiable, all the same the rider gives every facility for his numbers e read is reducing to a minimum any ible cause for complaint,

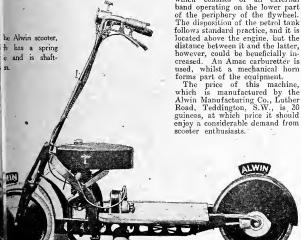

obviate the projecting rear lamp, mbodying it within a number plate, srs. S. and H. Truman, of 12, Curzon et, Birmingham, have introduced the

trear light illustrated.

consists briefly of a shallow cast
inium box, which is easily detachable
the back plate. The box is fixed to
arrier, and carries a two-volt electric bulb, and also a small burner for dene gas. In a slot in the front on of the device is fitted a vertical of ruby glass, and alongside two s of thick glass in rubber linings. een these glasses is a piece of parchpaper for the numbers, and when etters and numbers are outlined and space filled in with black paint the is similar to that of opaque glass. price of the rear plate complete with and burner is 30s.

HE ALWIN SCOOTER.

HILST visiting the stands in the Toy Department of the British Industries Exhibition at the al Palace, London, we noticed a motor scooter, which, although ited amount its smaller foot proited amongst its smaller foot-pro-I brothers suitable for children, was lerably more than a mechanical

A rear number plate, the transparent lettering of which is illuminated from the rear,

is mounted between two U-section longitudinal members, the front ends of which are held to the steering head by two Vshaped supports, whilst attached to the rear end of the frame are two laminated springs supporting the rear wheel. The drive is conducted from an external flywheel at the rear of the engine, by a propeller-shaft to a bevel pinion engaging with a crown wheel attached to the near side of the back wheel. A small chain sprocket is mounted on the propeller-shaft, and drives a C.A.V. magneto bolted to a plate behind the engine, and, a few inches nearer the rear wheel, the shaft is cut, the ends being joined by a coil spring to absorb the impulse shocks of the engine. Although solid tyres are nsed, the greater road shocks are absorbed at the rear by the Iaminated springs, and at the front by a novel vertical springing action. We think, however, that pneumatic tyres would greatly improve the vehicle, both in easy running and as a commercial proposition, at least in this country. The front at least in this country. forks reciprocate on a line parallel to

the steering head, and expand and con-

toy. A small 13 h.p. two-stroke engine

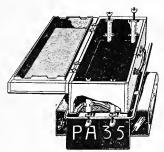

tract a coil spring located within the latter. An engine brake is used, which consists of an external band operating on the lower part of the periphery of the flywheel. The disposition of the petrol tank follows standard practice, and it is located above the engine, but the distance between it and the latter, however, could be beueficially increased. An Amac carburetter is

Alwin Manufacturing Co., Luther Road, Teddington, S.W., is 30 guineas, at which price it should

A READILY DETACHED CARRIER BOX.

EW are the number of bulky fittings which, when attached to some part of the machine for a considerable time, do not succumb to the effect of road vibration. Particularly is this so in the case of receptacles attached to In the case of receptacles attached to the carrier for the purpose of accom-modating tools or luggage, which, being directly over the rear wheel, are sub-mitted to practically all road shocks. A very substantially constructed box where the method by which it is beld to the carrier has been carefully planned

in the endeavour to eliminate the usual

A quick detachable carrier box.

rattling associated with the use of straps and the like has recently been marketed by the Engineering Accessories

narketed by the Engineering Accessories Co., 2, Army and Navy Mansions, 115, Victoria Street, London, S.W.1. This fitting is provided with four holts, which pass through two aluminium *housings bolted to the inside edge of the two sides longitudinally facing each other, and are screwed beneath the box to metal strips passing under the cross members of the carrier. Inserted between the bottom of the receptacle and the carrier is a felt pad, and by tightening the fly nuts down on to the aluminium housings the pad is tightly sandwiched between the carrier and the box; this retains the latter rigidly in position and eliminates any rattling. A leather handle is also fitted, in order that the box may be carried by hand. A lock is also provided.

The capacity of the case is sufficient to

contain the necessities for a week-end

The Argenteuil Hill-climb.

A Popular Paris Event in which New French Machines Participated.

A LTHOUGH only a local event, with all the competitors from the Paris region, the hill-climbing contest at Argenteuil, a few miles to the north of the French capital, provided some interesting sport, and united a very large number of spectators. The hill, which is exactly one and one-fifth mile in length, varies in gradient from 3% to 10%, and has four rather difficult turns. It had rained all night, and the surface was slightly greasy, which is doubtless why no records were broken.

The fastest time was made by Joly on a 500 c.c. Alcyon in 1m. 33s. Alcyon machines also won in the 350 c.c. and 250 c.c. classes. There was a dead heat in the 500 c.c. sidecar class between

Joly (500 c.c. Alcyon), who made fastest time.

Psalty on a Rover and Lacour on a Georges Levy. As the English machine carried a greater weight than its French rival, it was accorded the first place.

Lacour (Georges Lévy sc.), who tied with a 31 Rover sc. in the 500 c.c. sidecar class

There were six competitors in cycle car class, the winner being I on a machine of his own make, follo by a couple of Morgans, with a Spl fourth. This machine is known England as the Globe. Results:

TOURIST TROPHY NOTES.

S OME particularly "hot" stuff " Levis., machines are undergoing tests. We hear that F. W. Applebee will ride one of them.

In connection with the carnival which the LO.M. authorities are organising for the T.T. week, it is proposed to hold a race meeting on the promenade. This will probably be held on the Wednesday morning, and, in addition to the T.T. classes, an event for 1,000 c.c. sidecars may be included.

There are many rumours concerning the new Diamonds with overhead valves.

The A.J.S. firm is not behindhand with its T.T. models.

Those who witnessed the sensational speeds of the 550 c.c. and 500 c.c. Sunbeams at Stile Cop last year expect something fast from Sunbeamland.

On the whole, Wolverhampton manufacturers seem more keen than those of other centres.

The Ivy should not be overlooked in the 350 c.c. class this year,

R. O. Clark, of Norwich, may be seen on a Levis. Is it correct that a new maker is thinking of making a 250 c.c T.T. twin two-

stroke using two Simplex engines?

Will there be any three-cylinder radial engines in the Junior race?

Or 500 c.c. single-cylinder *two-strong the Senior?

Shall we have any of the Amer "star" riders over here?

Why do not some of the makers of c.c. twins build up machines with cylinder to compete in the 250 c.c. for The Motor Cycle trophy?

Rem Fowler, the old T.T. compet will ride this year.

G. Kuhn, who has been so success on Levis machines, will race on a model from the Butterfield factory.

Is Coventry losing its grip on my cycle events? Will there be a Cove rentrant in the T.T.?

A SPORTING NORTHERN EVENT.

Photographs Nos. 1, 2, and 3 show competitors—J. Beck (Sunbeam), J. Alexander (Arid), and J. V. Russell (Morgan)—on the bad hairpin bend on Glen Douglas. No. 4 depicts A. Brash (Harley-Davidson) and A. J. Lindsay (Scott) being checked in at Arrochar by B. Allan Hill.

A SIDECAR LUNCHEON BASKET.

O complete the sidecarist's summer equipment, a compact luncheon and tea basket, of a size permitting it to be placed in the sidecar locker is now regarded as a necessity. Numerons sizes, suitable for any number of persons, are marketed by Messrs. Dunbills, Ltd., 359-361, Euston Road, London, N.1.

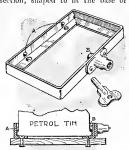

The Popular tea and luncheon basket.

A compact and light basket, however, especially designed for use in cases where space is the first consideration, is shown in the illustration. All the essential fittings are provided for cream, butter, and methylated spirits, in addition to sandwich cases and cups. The price of the Popular tea basket, illustrated, is £2 9s. 6d. complete.

A NEAT PETROL CAN CARRIER.

THE practice of fitting luggage grids to sidecar outfits is rapidly growing, and to owners of machines thus fitted the neat little petrol can carrier illustrated herewith should prove of considerable interest. As will be seen, it consists of a rectangular framework of L'section, shaped to fit the base of the

A neat device for carrying a petrol tin.

ordinary two gallon petrol tin. frame is firmly secured to the luggage grid by means of four screws or bolts. On one side of the carrier are two studs AA, under which the bead of one side of the petrol can is placed. The bead on the other side is held down by a spring-actuated stud B, which, when in position, can be positively locked, thus effectually circumventing any attempt at theft. We understand that Messus. Bond and Co. Earlsdon, Coventry, have the distributing rights for this accessory.

THE RAPIER ECONOMY VALVE.

A NEAT little device, the invention of Mr. H. Castell, has been recently placed on the market by the R.P.R. Engineering Works, 160, Regent's Park Road, London, N.W. It is designed to screw into the induction pipe, and the union is connected to the petrol supply. The lift of the automatic air valve can be regulated by means of the screw running through the cover of the device. When starting up, the air valve

The Rapier economy valve.

is screwed down and the petrol needle opened slightly, so that an explosive mixture is easily drawn into the com-bustion chamber. When once the engine has fired, the petrol is turned off, and the air valve is set to open to the extent at which it gives the best results.

AN ACETYLENE GAS PURIFIER.

USEFUL little fitting for those who use acetylene lamps has been accently placed on the market by the R. and P. Accessories Company, 105, Shea Landon, E.C.4. It may use acetylene lamps has been re-E.C.4.

A device for purifying acetylene gas.

be clipped to any part of the frame. and consists of a metal box in which are specially prepared chemicals to absorb any mois-ture in the gas which might tend to choke the jet in the burner. The price is 4s. 6d.

AN IMPROVED BELT FASTENER.

N placing the John Bull belt fastenon the market, the Leicester Rubb Co., Ltd., Post Office Place, Leiceste have carefully studied motor cyclist requirements.

This fastener, which the firm fr introduced before the war, has undergo a considerable amount of improvemen

The John Bull belt fastener.

and possesses the following features. T ends of the left are protected fr damage as they enter the pulley, means of leather pads, and thus efficient and continuous drive is obtain Hooks and spare links of various si: may be fitted to obtain any desir

AN A.J.S. PETROL CARRIER.

A FITTING which should be me appreciated by A.J.S. riders I recently been placed on the marby Messrs. H. Taylor and Co., It 219, Store Street, Tottenham Co. Road, London, W.C.
This accessory, the Taylor petrol carrier, although designed expressly A.J.S. machines, can, with little alte tion, be made suitable for other. mo cycles. One of the vertical arms wholds the petrol tin in position is pyided with a spring which, whencross arm at he top is placed under

neath the milled headed on the top of the other's arm, exerts pressure downwards on the and retains it in position. The special fittings for attachment to A.J.S. machine are located on two six of the wooden base. These can, he ever, be altered quite easily and invery short time to suit individual conference. quirements.

The Editor does not hold himself responsible for the opinions of his correspondents.

All letters must be addressed to the Editor "The Motor Cycle," Hertford Street, Coventry, and must be accompanied by the writer's name and addresse.

THE MACHINE FOR SPORT.

Sir, I notice Lt. J. H. Lewis, R.G.A., in your issue of March 4th remarks that a 5-6 h.p. twin is sweeter and more reliable than a single. He also states that the acceleration is far better than on a single. I am the owner of a 1920 T.T. Norton single speed. I have had ninety-one machines, and this little sporting Norton I would not exchange for any other machine on the King's highway. Wet or fine, I can do three miles an hour or sixty. I have no connection with Nortons, Ltd.

REG. A. GREEN.

LA TURBIE HILL-CLIMB.

Sir,-In the official results of the La Turbie hill-climb I am placed third for this event, but this needs a little

explanation.

My actual time on the hill, as originally announced by the Moto Club de Nice, was 10m. 55\frac{1}{2}s., the next man taking 12m. 41\frac{1}{4}s., and the next 19m. 45\frac{1}{2}s. For some unknown reason, the committee said that I started thirteen minutes late at the bottom of the hill, and, although no official time for starting had been given me in accordance with their views, the committee credited me with thirteen minutes, making my time 23m. 53gs.

W. DOUGLAS HAWKES.

PROVISIONAL PRICES.

Sir,—The various reasons put forth by manufacturers explaining the increased prices include scarcity of raw material and increase in cost of production. I was looking bis week at a 1919 model motor cycle, manufactured by a very well known firm, and charged at 1919 prices. A close camination of this machine revealed the following; Fork prings stamped 1912, forks (front) stamped 1914, and the rame bore the date 1915. I am of opinion that this firm a profiteering, as the date of manufacture of the parts entioned shows them to have been manufactured under the large ways conditions on far as the makeur are considered. leal pre-war conditions, as far as the makers are conerned, but this machine cost the full 1919 price. W. A. PECHEY.

PEED WOBBLE.

Sir,-The suggestion made by Mr. Walter Hare that speedan's wobble is caused by the unequal strength of the front rk springs is very interesting. Mr. Hare mentions the unumunity from wobble of the Rudge Multi, which has a ne-spring fork. One might also mention the Triumph, in hich the road shocks are taken by one large spring. This lachine seems to be quite free from speed wobble. It ould be instructive to hear of the behaviour of machines tted with the Saxon single spring fork.

Probably wobble is caused by one or more of the follow-

g factors :

(14) Unbalanced front wheels.

The effects of such lack of balance would become very veat at high speeds, and would seriously affect the steering of affected so that the rider begins to se control of his machine, speedman's wobble is inevitable. The steep whose is simplified in the second of the clists balance their front wheels is significant.

Call the centre of gravity being too far back.

One has only to ride a machine with a heavyweight on e pillion to realise how much steering is affected by the ntre of gravity being too far back. The Scott, which rries its weight well forward, seems to be peculiarly imune from wobble.

(3.) Insufficient rake of the steering head.

(4.) Badly designed handle-bars, when a permit of effective control of the steering. Of course, speedman's wobble may also be caused by a swerve while travelling at high speed, or by the rider gripping his handle-bars too tightly, or by attempting to clear down suddenly when going fast. C. MUSTILL.

Sir,-I have observed a lot of correspondence in your paper recently re speed wobble. I have found, as a rider of many types of machines, that those with the least tendency to wobble at speed are fitted with well raked forks.

I have crashed, through wobbling, on many old type machines, which had practically vertical forks.

L. CLARK.

ROLLS-ROYCE PURCHASE OF INDIAN FACTORY.

Sir,-Since the statement appeared in the press to the effect that the Rolls-Royce Company had purchased the Indian factory in Springfield, Mass., U.S.A., we are receiving letters from various people asking if this means that the

manufacture of Indians is to be discontinued.

The factory purchased by the Rolls-Royce Company was that known as the Hendeeville plant, situate $1\frac{1}{2}$ miles away from the main Indian factory. About two years ago our directors decided that it was not practicable to manuour directors decided that it was not plattered to main facture economically in two factories situated so far apart, with the result that the main plant was greatly added to and all the machinery moved from the Hendeeville plant to the main factory. This left the Hendeeville plant for sale. It is very gratifying to our directors to know that such a worthy concern as the Rolls-Royce has purchased what is undoubtedly one of the most up-to-date automobile factories in existence.

HENDEE MANUFACTURING COMPANY. W. H. Wells, Manager.

THE PARIS-NICE TRIAL.

Sir,—Quite a number of London and provincial papers (misled by certain French reports) acclaimed the Harley-Davidsons as the "winners" of the Paris-Nice, and commented on the success of the American machines. The Harley-Davidsons happened to arrive first and the papers mistook the trial for a race. Some conceded that the British machines, though they did not win, did very well! As a matter of fact, of course, the American machines were not "in it" with the British. M. Verpault, on a Harley-Davidson, was fourth. Of the first ten, nine were British, including the only cycle car which completed the course. I have no wish to run down the American machines-every one knows that they are excellent—but one does not like to see our British manufacturers and riders robbed of the credit of a grand success.

H. GEORGE MORGAN.

The message in question was issued by a telegraphic news service, and the discrepancies have already been pointed out to the managing director of that service by *The Motor*

Cycle.—ED.]

Sir,-I notice in your report of the Paris-Nice Trial (fourth day, page 240, February 26th issue) you mention the fact that my sidecar frame was fractured, and also that

the fact that my success.

a spring was broken.

In fairness to Messrs. A. J. Stevens and Co., Ltd., I feel I must point out that this sidecar was not one of their standard productions, but one I had fitted specially for the W. DOUGLAS HAWKES.

BII

STANDARDISATION OF CHAINS.

Sir,-It may be of interest to some of your readers to learn that in connection with the standardisation of chains, the Association of British Driving Chain Manufacturers, Bassishaw House, Basinghall Street, London, E.C., has been in touch with the American chain manufacturers with a view to getting the standards proposed by this Association established internationally. To this end, each body has referred its proposals to its National Engineering Standards Committee. Inasmuch as the differences between the British and American proposals are very slight, it is felt that international standards can readily be established in the near rational standards can regard be established in the leaf-future, pending which the Association of British Driving Chain Manufacturers has decided to defer putting into force the standards already announced for roller chains.

BRAMPTON BROTHERS, LTD.

W. R. Hood, Advertising Department.

THE T.T. AND TRADE.

Sir,—With reference to the T.T. races to be held this year, and the letter from the Triumph Cycle Co. in The Motor Cycle recently, why should machines be specially prepared for the race in question?

Why should not the officials concerned with the arrangements go to the various firms who wish to compete and pick out a machine, or machines, from a batch of standard ones ready for delivery? To make certain that the bicycle chosen is the one ridden in the contest, let it be sealed, or something equally as good done—I will leave that for those concerned. Another point would be in allowing the intended rider, say, three hours to tune up and make necessary adjustments only. I think this would be of much sary adjustments only. I think this would be of much more interest to the public, and would help them to choose their motor cycles-for, after all, it is the public who keep the various manufacturers going.

If it should prove successful, why not carry on the same every year?
Waltham Cross,

Sir,-I think most of us hope the T.T. Races will not languish this year for lack of entries. As one interested in the sport, I look forward to the pleasure of witnessing the revived race, and to participation in its enjoyable preliminary excitement. As one engaged in the trade, I believe that, for many years to come, it will pay manufacturers to encourage, by personal and financial help, everything that will maintain vigour in the sporting side of motor cycling.

Motor cycling can be divided into three classes : 1. Business use.-The use of a machine to transport

rider from place to place on business.

2. Pastime.—The use of a machine to transport rider to a place where he looks for pleasure, and along a road from which he hopes to obtain pleasure by the mere fact of travelling.

3. Sport.—The use of a machine for the pure joy of it, and interest in the machine itself, its workings, its limitations, and its possibilities, its construction, and its mechanism, its power and speed, its flexibility and poetry of

motion.

Shall I be correct in saying that practically all the motor cycle buyers of the early days would be of the last group, and that half the motor cycle buyers of to-day might be similarly classified, and that it is from this group that the impetus to the whole movement principally comes, and, for their encouragement, the expense and the trouble of the T.T. Race is worth while, over and above the actual mechani-

cal experience and knowledge gained by the race. So much for the theory of the matter. To get down to practical details, it is to be hoped, if large abstentions from the trade are going to imperil the success of the Isle of Man Races, that ways and means may be found partially to counterbalance matters by help in other directions.

No doubt many of your readers can ofter suggestions, and some of them might help the A.C.U. For instance, here is a hald suggestion that might be worth consideration. That the A.C.U. ask each of its affiliated clubs—or, at all

events, such of them as are powerful enough in finance or membership, or both—to nominate for the T.T. Races a rider from their ranks, such rider to be carefully selected by the club committee to ride in the club's name, and the club to pay either all or a portion of his expenses.

For the club to nominate a rider and expect the latter to pay his own expenses would nullify any merit in the scheme. On the other hand, for the rider to expect the club to pay all his expenses would be going too far.

A practical compromise might be for the club to pay the entry fee, railway fare, and boat fare, to the Island, for man and machine, and sundry other incidental expenses directly connected with the races, but not the personal hotel and other expenses of the rider (which latter he could well pay himself are a cartishuir at the could well not be recommended. pay himself, as a contribution to an early summer holiday).

Or perhaps the A.C.U. could afford to pay the entry fee (from its own funds back to its own funds) in the case of this special club nominee, and the club and rider share the

other expenses.

In choosing its rider for the race, the club would naturally first make the entry at an early date, and then leave the selection of the man till later. There would be rivalry among the members for the honour, and, in making the selection from applicants, the club would take into consideration the skill and experience of the man, and also his resources in the way of machines and tuning.

Anyhow, I throw the rough suggestion out to the A.C.U., the clubs, and to your readers, hoping it will at least secure some comments and criticism, even though the latter be unfavourable.

FRANK WHITWORTH.

France.

WANTED-A LUXURIOUS SIDECAR.

Sir,—Having noted "Xenos's" letter in your issue of February 19th, I would like to make a few remarks.

I fail to understand the point that immediately a gentle-man mounts a motor cycle he becomes a bounder. Is

"Xenos" speaking from experience?

With regard to the fact of being able to afford a car, I too, can afford one, but prefer a sidecar, but I do not think that class at all a large one; many people own both car and motor cycle, I am sure.

My passenger has been generally a lady, and even on the wettest of days has arrived at her destination-quite dry and clean. The machine has windscreen, hood, and sidecurtains, which one can obtain nowadays for almost any make of sidecar.

Another point is the twist grip control. Surely if it is so magnificent, British manufacturers would have fitted it long ago. Has "Xenos" tried it on very bad roads, such as the roads of Northern France of the present day?

I owned, until quite recently, a 6 h.p. machine of well known make, and on wet days I often rode without overalls in slacks and shoes and did not get muddy; I had no leg

in slacks and shoes and did not get midudy; I had no see shields, the mud guarding being quite adequate. It is understood that I only made short journeys in this kit. The remarks about the cycle car having "I-can't-quite-afford-a-car" appearance—perhaps it has—I am of opinion that it is in many cases the real reason for buying a cycle car. So why scoff at a man who cannot afford more and who is perhaps doing his ntmost to give his wife and family a good time?

If "Xenos" is willing to pay, why not have an outfit de luxe built to his own specifications DASWANDI KHAN.

WEATHERPROOF SIDECAR WHICH APES THE COVERED CAR A landaulet sidecar produced Messrs. Calland, Lee and Co., Manchester.

MOTOR (YCLE

Sir,-I de not imagine that you can waste your valuable space on controversies which present no feature of general

space on controversies which present no feature of general interest, so I will be brief.

"H.J.B.," in your issue of March 5th, says that he read my letter with sorrow. I read his with amusement.

I wrote as I did about cycle cans because your previous correspondent predicted (wrongly, I think) that they would drive powerful motor cycles off the market.

I still think that if manufacturers will give us a powerful sidecar, built regardless of expense, with twist grips, designed so as not to transform itself and its rider into a road cleaning device, they will find sufficient purchasers to

repay the venture. "H.J.B." can, apparently, keep himself spotless, and, presumably, prefers tap-twiddling, and as to his Parthian gibe about my (non-existent) Rolls-Royces and money-bags, I ery applogetically in the words of Omer Khayyám:

I make the most of what I yet can spend, Before I. too, into the mud descend. Ah! surly tapster, thumping my wet clay; Ah! 'H.J.B.' smite gently, brother pray." Kensington, W.8. XENOS.

A TOUR WITH SIDECAR AND BABY.

Sir,-I am enclosing snapshots of my A.J.S. and little daughter, who accompanied me on a tour of 11.000 miles during last summer. (MRS.) J. A. NEWMAN. during last summer.

AIR-COOLED CARS.

Sir,—In your issue of the 4th inst., "Ixion" states that most of the engines mentioned adopt "cowling," i.e., the air blast is concentrated upon the cylinder walls by aluminum plates, jacketings, or deflectors. We should like to say that this statement is not quite accurate. In point of fact, "cowling" of the cylinders, with the object of ensuring uniformity of cooling to each part of the cylinders, is quite the exception rather than the rule.

In the Enfield-Allday, of course, the system is carried out very completely, but so far as we are aware the "Palla-dium" is the only other example in which this type of owling has been attempted—most of the examples having lans, more or less promiscuously placed, and the resultant in draught anything but efficiently used, at least in our

opinion.

Whilst on the subject, we should like to express our prinion that engines, in which the cylinders are exposed to the weather, mud, dust, etc., are not likely favourably to ufluence the progress of air-cooling.

We, of course, quite appreciate the fact that it cheapens

production, but our opinion is that if air-cooling is to be inally successful in its appeal to the motoring public, then it least as much protection will be expected for the aircooled engine as for its water-cooled brother.

ENFIELD-ALLDAY MOTORS, LTD.

Sir,—In your issue of March 4th, a correspondent, "Single and Twin," puts forward an interesting factor in the case of a fuel tax

I would suggest to him that the twin two-stroke he mentions is altogether far heavier than the big single of

higher horse power.
If such is the case my argument holds good, for the heavier machine would naturally de more damage per mile than would the lighter.

than would the highter.

In conclusion, I would remind him that there is such a thing as "tune," and if he has not troubled to enquire into the cause of excessive consumption he must needs pay the NEMO. piper. Norwich.

WELDED FRAMES.

Sir,—I saw in *The Motor Cycle* recently that the Douglas Co. were proposing to oxy-acetylenc weld all their frames, and I would like to ask, through the medium of your paper,

what others think about it.

I have come in contact with frames which had been broken and welded in, say, the bracket, and being unable to loosen the weld by the usual method of heat have had to scrap the whole bracket and tube. Therefore, I take it, if one buys an oxy-acetylene welded Douglas, and bends or bracket by the proper well the proper to the breaks the frame, a new one will be required, instead of a repair, which could have been done at any garage in the ordinary brazed frame, or otherwise send it to the Donglas firm to get the damaged tubes burnt out and new ones welded in. From the manufacturer's point of view, it is a quicker method, but, to my mind, it is at the cost of the motor evelist.

ROAD PESTS.

Sir,-The time is approaching when motorists must become

desperadoes of the most savage type.

desperations of the most savage type.

On a recent Sunday, feeling energetic, I arose from the depths of an armchair and sought my motor cycle—a 7.9 h.p. Indian sidecar. I departed to where the only girl in the world lives (Don't get excited, this is not a love story), and together we lobbed out into the country. The roads were good, the weather was bon, the 'hus was going well, and she is a pretty girl. Yet I did not enjoy the drive. Why not? Now I will tell yon.

I first met them when I hit the Reigate Road at Sutton. I modestly sounded my Klaxon. Did they move? Not much: they remained four abreast. With extreme difficulty, I passed them. I did not hinder them. I realised they were

I passed them. I did not hinder them. I realised they were adas, but I thought they were exceptions. Why did not I go home then? They were on Banstead Downs in their thousands; they were all over Reigate; they went round corners without locking round, without putting their hands out, without hands on handle-bars, and as far as I could see, without brains. Who were they? I will leave it to your readers to arrive at the solution of this very difficult problem.

Can nothing be done to remove this danger to motorists from the English roads anyway? JUSTABOUTADENOUGH.

BOOKS AND MAPS FOR MOTOR CYCLISTS.

Issued in conjunction with The Motor Cycle.

MOTOR CYCLES AND HOW TO MANAGE THEM." The standard handbook on the motor cycle; its core and management. It deals with every part of the machine, and with all types of machines. 266 pages, 400 illustrations. Twentieth edi net. post HNT3 AND TIPS FOR MOTOR CYCLISTS."
Containing over 400 useful "wrinkles" and helpful
hints in regard to motor cycles. Leventh Edition. Just published. ... 2/3 TRACING MOIOR CYCLE TROUBLES."
A reliable system for tracing motor cycle faults and of remedying any trouble when found. Fourth Edition.

Edition.

THE MOTOR CYCLE" ROAD MAPS

En land and Wales, Scotland. London (showing roads into and out of London and avoiding London). Mounted on linen. Set of three, complete in case.

Obtainable by post (remittance with order) from ILIFFE & SONS Ltd , 20, Tudor Street, London, E.C.4, or of leading Booksellers and Railway Bookstalls.

THE RICHMOND MEET.

A Popular Rendezvous for Northern Motor Cyclists. Great Attendance Probable on April 2nd.

As an annual open-air meeting of A motor cyclists, the Richmond gathering in North Yorkshire must, without doubt, take priority, for it was first held in 1907, and carried on regularly each year until the war. The meeting was revived in 1919.

Great efforts have been made this year by the Northern clubs to ensure a record attendance, and prizes will be offered for the smartest machine present, for the lady who has driven the greatest distance to attend, for the most novel and ingenious idea on a motor cycle, and for the club with the largest percentage of paid-up members at the count which takes place at twelve o'clock. In awarding the prizes, the mileage of the competitors will be considered.

It is, indeed, interesting to look back over the illustrated reports of the Richmond meet that have appeared in The Motor Cycle, commencing with the first one in the issue of April 10th, 1907. The record is one showing the enthusiasm and keepness of the North Country riders, who, in the days of fixed gears, belt-drive and accumulaters travelled for beit-drive and accumulators that the most part with great regularity from all parts of Yorkshire and Durham. The event was undoubtedly the precursor of events which in more recent times have been organised on similar lines. Clubs in the North-eastern counties will

be able to compete for the Grimshaw shield, which is being offered to the one having the greatest percentage of paid-up members present. This trophy is put up for competition by the North-Eastern Automobile Association, and only drivers (of cycles and cars not exceeding 1,600 c.c.) who are members of the Association will be counted.

This award is quite distinct from those mentioned in the second paragraph, and is confined to the Sunderland, Bishop Auckland, Durham, South Shields, Hartlepools, Wansbeck, Newcastle, and Darlington clubs, the members of which have to provide themselves with variously coloured distinguished considerations. distinguishing armlets.

MODERNISING EXISTING MOUNTS.

How Old 23 h.p. Machines are being Converted into Up-to-date 31 h.p. Mounts.

IT is perhaps a remarkable fact, consider-ing the number of motor cycle engines manufactured on the Continent, and manuactured on the Continent, and the present shortage of engines made in this country, that makers have not been tempted to use them. Only one imported engine has been fitted in British motor cycles to any extent, and this—the M.A.G., which hails from Switzerland took a front rank position, and to-day is appreciated by hundreds of users.

For some time past supplies of new M.A.G. engines have been very restricted, and probably doubt exists in the minds of many owners of M.A.G.-engined machines regarding the position concerning spare parts. Quite a large number of Motosacoche, Matchless, Sunbeam, J.H., and O.K. motor cycles, Morgan cycle cars and A.C. four-cylinder light cars exist, and owners will be interested to know that the M.A.G. Engine Co. are now in a position to undertake repairs, and supply spare parts. Pro-bably it would be desirable to send engines only for repair, but we understand the complete machine may be sent if so desired,

The company is also making a speciality of converting 23 h.p. Enfield machines with new 3½ h.p. M.A.G. engines, which prove very successful. The trame, which prove very successful. In traine, it has been found, is quite suitable for the extra power, and even for light sidecar work. The same magneto, carburetter, gear and chains are used. Owners of these Enfields may find it owhers of these Emieurs may mid it a better investment to have the 3½ h.p. engine fitted than to have the old 2½ h.p. engines rebuilt. The address of the M.A.G. Co. is Harrow Road, Willesden Junction, N.W.

THE A.A. ROADSIDE MOTOR FUEL SUPPLY STATION.

Benzole, Water, and Compressed Air Road-side Service Inaugurated by the A.A.

A^N up-to-date motor spirit bulk storage station has been installed by the A.A. at Aldermaston, on the Bath Road. This is the first of its kind, following American lines, which has been erected in Great Britain, and is the first of a series to be erected by the A.A. throughout the country.

The A.A. does not make any profit on the spirit sold, but allows their local agent to use the installation for selling his own spirit. The installation also includes a telephone, a delivery pump, and the New Pelapone engine and electric generating set, delivering "free air" through an air compressor, so that

members' tyres may be blown up while the tank is being filled. Water is also laid on for filling radiators.

At the present it is only proposed to

run a day service with an A.A. road patrol in charge, but if the service

proves successful, as is anticipated, day and night service will be run, the moment only benzole conforming to the A.A. standard is supplied. The ser-vice, of course, is available to members

British and American Ideas of Motor Cycle Suspension.

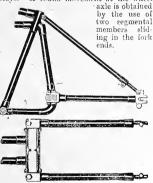

PROBABLY every motor cyclist who has a mechanical mind has, at some time, attempted to solve the problem of motor cycle springing. It seems so easy when one first thinks of it, and to commit an idea to paper takes but a minute. Every month we receive many designs of inventions relating to spring

Two leaf springs, levers, and links are embodied in the invention of Mr. H. T. Towner, of Eastbourne.

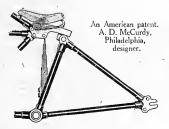

frames, but only the very small minority reveal any promise, while some of the most obvious methods of obtaining a sprung frame form the basis of large numbers of ideas from readers who appear to be surprised that such simple means have not been thought of before.

On this page we illustrate a selection of the designs of a more practical nature. Two are very similar; that of Mr. Buckley, employing two coil springs for suspension with two additional springs for recoil, is very reminiscent of the American Pope design. Mr. Bennett's design is practically the same idea, but in a more elementary form, as the axle movement is vertical, and in consequence the tension of the chain or belt would be inconstant.

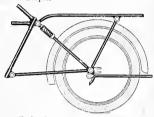

The device patented by the Auto Improvement Co., of Dudley, is intended to convert rigid frames into spring frames, and employs a single laminated spring of the cantilever type, supported by a bracket fixed to the upper rear stays. A radial movement at the wheel

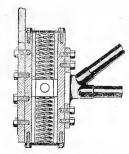

H. Markham (Redditch) favours a laminated spring placed transversely at the pivoting point of the frame.

Mr. Towner's idea perhaps embodies too many links; while the McCurdy American patent and Tebbutt's design are capable of development. Markham's patent employs a laminated spring in a new way, the spring being placed transversely at the pivoting point of the frame. Mr. Moss's idea is perhaps the most simple.

Enclosed springs of the volute type are suggested by Mr. G. K. Moss, of Beckenham.

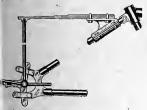

An idea from India. Mr. J. W. Bennett, of Nasik, B.P., suggests a similar arrangement to Mr. Buckley's.

W. Tebbutt (Coventry) uses both a laminated and a coil spring. The latter is enclosed in a cylinder.

Buckley's invention is reminiscent of the American Pope, embodying coil springs above and below the axle, which slide in guides.

A patented attachment by the Auto Improvement Co., 63, Tower Street, Dudley.

"Neat Riders."

The motto of a certain American motor cycle club is "Neat Riders." British clubs also would help the movement by encouraging their members to wear neat riding attire.

Given Away.

Pearson's Weekly is offering a 5½ h.p. Rudge-Multi as a prize in a new competition. P. W. readers are invited to make a sentence, the words commencing with the letters J-O-Y-R-I-D-E. The competition closes on the 30th.

Police Active.

At Catford the police are very strict on rear lamps and noisy machines. Every fine morning a trap is worked between George Lane and Lewisham Public Library.

Forest Hill: Motor cyclists are stopped for fast driving and dirty number plates. Anerley: A trap is worked on Sunday attennoons in Croydon Road, between "The Robin Hood" and Selby Road.

We are warned that two police traps are working in the Birmingham district every week-end. One is situated on the Warwick Road, between Olton and Solihull, the other on the Stratford Road just outside Henley-in-Arden. Heavy fines are imposed for exceeding the speed limit.

A Unique Competition.

With the laudable idea of encouraging considerate driving and courtesy on the road, the Southend-on-Sea and District Automobile Club recently organised a unique surprise run, which will no doubt appeal to other clubs. Observers were stationed along the route, in order to note any incorrect or inconsiderate driving; to demand the production of certain articles, such as driver's licence, which every motorist should carry; and to ask questions, the answer to which should be known by every road user. A number of marks were credited at the commencement of the run, and a pre-determined number were debited for any transgression, such as cornering too fast or wrongly, failing to blow horn, or to help any stranded motorist. This form of event could be greatly enlarged upon, and should prove of considerable interest and instructional value.

The Production of Benzole.

With the object of compelling the South Metropolitan Gas Co. to produce "the largest possible amount of benzole or other motor spirit by the gasification of coal," a petition has been presented to the House of Lords against the Bill which the company is promoting for the purpose of altering the existing method of charges to consumers.

The petitioners comprise the Automobile Association and Motor Union, the Auto Cycle Union, the Commercial Motor Users' Association (Incorporated), the Cycle and Motor Cycle Manufacturers and Traders Union, Ltd., the Royal Automobile Club, and the Society of Motor Manufacturers and Traders, Ltd.

It is submitted that gas undertakings can produce much larger quantities of benzole and other by-products, and that in the national interests of the conservation of coal and the maintenance of key industries they should be required by law to do so.

It is estimated that over 30,000,000 gallons of motor fuel could be produced from the existing gasworks of the country if "scrubbing" were universally adopted in the manufacture of gas. This home supply would be of material assistance.

Special Features.

PROS AND CONS OF ENGINE DESIGN.
HI_L-CLIMBING IN F. ANCE.
A NEW CARBURETTER.

The Institution of Automobile Engineers.

The London Graduates of the Institution of Automobile Engineers will pay a visit to the National Physical Laboratory, Teddington, on Saturday afternoon, March 20th. They will eatch the 2.3 p.m. train from Waterloo to Teddington and will meet outside the Laboratory at 2.45 p.m.

Arbuthnot Trophy Trial.

This sporting event, open to officers and midshipmen on the Active List of the R.N., R.N.R., and R.N.V.R., will take place on July 7th and 8th in the Home Counties, finishing on Brooklands track. It is expected that now leave is more easily obtained a large and representative entry will be received for this event. Preliminary regulations, together with entry forms, may be obtained on application being made to the secretary of the Auto Cycle Union, 83, Pall Mall, London, S.W.1.

SKI-ING BEHIND A MOTOR CYCLE.
A speed event at the annual mid-winter carnival at Saranac Lake, New York.

Spring Number.

Next week's issue will be greatly enlarged, and will contain, in addition to an illustrated Buyers' Guide, many special articles of a seasonable character.

A War Record.

We are pleased to hear that Mr. Harold Karslake, that familiar figure in the big trials of the past, is now demobilised, leaving the Army with a war record dating from August 11th, 1914. It is a full one, and one of which he may be proud. Enlisting in August, 1914, he served in France (Bailleul) until the end of 1915. He then became an instructor in the School of Technical Training at Rending and Hatton, being promoted to be the chained sergeant-major. In March, 1917, he was mentioned in despatches. He says his first big trial this year will be for the "Jarrott" cup at Easter.

The Colmore Cup Team Prize Won by

At a committee meeting of the Sutton Coldfield A.C., held last Friday, it was decided to award the team prize in the recent Colmore Cup Trial to the Ariel team. We congratulate the makers of this well-known machine, which, incidentally, has been consistently successful as team prize-winners. In one year an Ariel team won the team prizes in the English Six Days, the Scottish Six Days, and the Irish End to End, but in these cases the single-cylinder machines usually made the scores. This, we think, is the first time a team of three twin Ariels has secured a team prize honour. The riders were L. Newey, J. L. Stocks, and F. J. Watson.

A "Knock-out" Hill-climb.

Messrs. Travers, of Newcastle, have placed at the disposal of the Newcastle and District M.C. a gold cup for competition annually, to be retained if won wice in succession, or three times in all. In addition, there will be a gold watch value 550) as first prize, and gold medals or other prizes. The event will take blace in July, and will be open to club nembers only. By becoming a member, uny rider may compete, and it is hoped o attract many well-known riders. There will be classes for 250, 350, 500, 560, 750, and 1,000 c.c., and also an unlimited lass. The event will be run on the knock-out." principle. An interesting bethod of handicapping has been devised, further details will be published later.

A T.T. ENTRANT.

H. R. Harveyson, one of the entrants in the forthcoming T.T., who is riding an Indian Scout.

The A.C.U. and A.A. Co-operating.

The A.C.U. is actively co-operating with the A.A. in obtaining signatures to the latter organisation's petrol price petition to the Prime Minister.

Scottish Open Hill-climb.

The Glasgow Western M.C.C. will hold an open hill climb on May 15th in connection with which a special prize will be offered for the best-performance on formula made by a team nominated by a Scottish club. Each team will consist of three riders—one each in 350 c.c. and 600 c.c. solo classes, and one in the "unlimited" sidecar class.

Westmorland M.C.C. Open Hill-climb.

On Easter Monday an open hill-climb will be run under the auspices of the above club. The hill selected is Orton Scar, about thirteen miles from Kendal. The nearest railway station is Tebay (L. and N.W.R.), four miles from the Scar. Several well-known clubs have notified their intention of competing, and the event will undoubtedly prove most interesting and enjoyable. Fifteen classes will be run, including a class for scooters.

D.R.'s at the Richmond Meet.

The meeting of Northern despatch raders which it was suggested should be held at Morecambe on Easter Monday, under the auspices of the A.C.U., will take place instead on Good Friday, in

Have you Signed the A.A. Petrol Petition?

Remember p.trol prices affect others than motor cyclists therefore ~GET YOUR FRIENDS TO SIGN ALSO.

Every Signature counts!

conjunction with the annual meet of Northern clubs at Richmond.

Messrs. Torkington and Loughborough will be present, and, with the Mayor of Richmond, will speak in the Town Hall. Lt.-Col. Pierce, R.N.R. (A.C.U.), will also be present.

Tourist Trophy Races.

In addition to the entries already received, the A.C.U. has been notified by Messrs. Butterfields, Ltd., that F. W. Applebee, R. O. Clark, and G. R. Kuhn will ride Levis machines in the Junior

Triumph Developments.

An important trade announcement made last week refers-to the Triumph and Hillman Companies. A preliminary agreement has been entered into between the directors of the Triumph Cycle Co., Ltd., and the Hillman Motor Car Co., Ltd., whereby the former will purchase the assets of the latter as from April 1st, 1920. The merging of the interests of these two companies implies a considerable extension of business on the part of the well-known motor cycle company, and developments will be watched with interest.

Mr Harold Karslake, now demobilised from the R.A.F.

The Petrol Prices Protest-Date Extended.

It was at first arranged that all signed petition forms should be returned by March 17th, but, in accordance with the desire of many supporters of the petition, it has been decided to extend the closing date to the 24th inst.

Second-hand Prices.

As was predicted in our issue of the 4th inst., the high prices asked for second-hand machines are still maintained. A noticeable leature is the number of old models which are now for disposal, owing to the owners taking delivery of their new models, which are just commencing to come through in appreciable quantities. It will be interesting to note the time which will elapse before these deliveries have an effect on the second-hand market.

PINIONS differ as to the practicability of using mercury in conjunction with copper or aluminium as an aid to air-cooling, but from the several references to the subject which have appeared in print, it seems to the writer that no one has yet regarded the question from a sufficiently broad and comprehensive viewpoint.

In the first place, the mechanical requirements demand a film of some liquid substance of high thermal conductivity and sufficient thickness to be able to adjust itself to the differences caused by the varying expansion of the cylinder wall and radiator jacket, and that this liquid must be capable of withstanding the full temperature of a hot engine without injury either to itself or to the materials with which it is in contact:

The condition of high thermal conductivity makes the liquid metal mercury almost the only substance that can be employed; but, unfortunately, amongst metals, it is a comparatively poor conductor of hear, and does not nearly equal cast iron, while chemically it is quite unsuited for the purpose suggested. I refer only to conductivity because the thinness of the layer of mercury would preclude convection currents from conveying any great portion of the total heat transmitted on account of the large surface exposed for a given quantity of mercury.

To consider first the case of mercury and copper from a chemical standpoint, it is well known that an amalgam of copper and mercury is used in dentistry as a filling for teeth, but it is not so well known that this amalgam is formed when copper and mercury are simply heated together. This amalgam is solid when cold, and is brittle. Furthermore, it does not adhere to cast iron, consequently it will not be always in contact with the iron, and thus the heat conductivity will be very much deteriorated, especially as the amalgam is a much worse thermal conductor than mercury itself.

Disintegration of Copper by Mercury.

But the worst point in the whole business lies in the fact that, even supposing that the copper jacket is thick enough not to be eaten into holes by the mercury, the latter will gradually work its way between the crystals composing the copper, weakening it, and rendering it too brittle to be capable of withstanding the severe temperature conditions and vibration met with in internal combustion engines.

The case of aluminium is more complex on account of the curious behaviour of aluminium itself.

Electro-chemically aluminium stands very close to such metals as calcium or manganese, in the respect

that it is more electro-positive than hydrogen, and would, therefore, be rapidly attacked by water and atmospheric moisture were it not for the very fortunate fact that it becomes coated superficially with a very thin, and practically transparent, film of oxide, which forms a complete protection. (The working of the Nodon electrolytic valve depends on this film.)

In the presence of mercury, however, this film is no longer sufficiently complete to protect the metal, and it is consequently very rapidly attacked. A piece of aluminium, superficially amalgamated, is, in fact, so rapidly attacked by moisture that, if placed in contact with a wet rag, it will become so hot, owing to the reaction, that the rag will commence steaming.

Properties of the Aluminium Amalgam.

This amalgam of aluminium and mercury can be formed simply by bringing mercury and aluminium into contact, and would be formed in the jacket; and, although it may be argued that the mercury is in a confined space, it must not be forgotten that the reaction between moisture and the amalgam is of a very vigorous character, and that it would, therefore, be impossible to prevent it from slowly occurring unless the jacket could be hermetically sealed, which I do not think is commercially feasible. Moreover, the mercury would, especially at higher temperatures, permeate through the aluminium just as it would through copper under such conditions; and, once any succeeded in reaching the surface of the aluminium, the destruction of the cylinder would merely be a matter of hours.

To sum it up, although I would not go so far as to regard the employment of mercury as an impossibility, yet I think that the practical difficulties in the way of its employment are out of all proportion to very small gain in cooling efficiency.

Since water-jackets in aero engines have been made of copper, electrolytically deposited on cast iron cylinders, why, therefore, could not a cast iron cylinder be taken, a fairly thick deposit of copper made on it, then flanges of copper shrunk on over the copper layer, and the electro deposition continued until the flanges and the copper layer were made quite solid?

It seems to me that the idea is feasible, and would provide an effective means of mounting copper flanges on to a cast iron cylinder without fear of separation occurring. (It is important to remember that a slight space between the cast iron and the outer jacket would behave, to a certain extent, like the vacuum space of a Dewar flask, and so effectively retard the discharge of heat from the cylinder walls.) H.W.R.

Paperchase in Warwickshire Lanes.

Coventry and Warwickshire Motor Club's Opening Event attracts over Sixty Members.

At the Coventry club's paperchase last Saturday. In spite of the inclement weather, there was a good attendance.

ANY motor cyclist desiring to become thoroughly acquainted with War-wickshire by-lanes is recommended to wicksmre by-fanes is recommended to in this club and follow a paper trail pre-terably laid by Mr. Sam Wright. There were sixty or seventy members at the start of the opening run and speed-judging competition from Whitley Common, near Coventry, and away went the "hare" on car, laying a trail over a sinuons course, irst this way, then that, and afterwards loubling back upon itself. When nearly wenty miles had been covered, the comsettlors (who were endeavouring to verage the speed they had drawn) were unt eight miles from Coventry. The end ame between Leamington and Warwick, witer thirty miles of rain-sodden roads, which added to the difficulties of the ourse, as the once white paper was more lifficult to detect. In one village the isual wags picked up a handful of The Motor Cycle clippings, which formed the rail, and carefully distributed it up a lind lane. The result was that everyody religiously followed the wrong scent, nd there was much reversing and mixed

mirth. The winners were announced at the Crown Hotel, Warwick, as follows: Motor Bicycles.—Rev. J. E. Philpott (21 Clyno).

Sidecars .- A. R. Grindlay (7 Harley-Davidson and Grindlay sidecar), 2 mins. slow.

Cars.-G. Smith (15.9 Humber).

Competitors ready to follow the trail. The reflections on the road convey an idea of the state of the weather when the timekeeper started the riders.

COMPETITIONS IN ITALY.

Targa Florio Event Postponed. Road Races a Feature of 1920 Programmes of Italian Clubs.

THE Italian T.T., the Targa Florio, has been postponed until September. It is hoped by Italian motor cyclists nat this date will be convenient for their ritish confreres to participate. Should ay decide to do so, our Italian correcondent informs us that they will be sure a cordial reception.

Below we give a list of the principal vents which will be held in Italy this

pril 11th.—Monterecchia Hill-climb. Sport Club Milano. pril 25th.—Circuit de Brescia (road race). U.S. G. Ravelli, ay 16th.—Circuit de Cremona (road race). U.S. Cremouse.

ay 23rd.-Grand Prix of Italy (road race). La Torino.

'May 30th.—Circuit "Tre Regioni" Reliability Trial for Italian machines, S.C. Milano, June 13th.—Circuit de Orbassano (road race), La Torino,

June 20th.—Circuit Valle Ticino (road race).

Moto Club Lombardo.

July 1th.—Consume Hill-climb. Moto Club
Florence.

July 25th.—Circuit of Lake Garda (road race).

Pro Garda.

Agust 8th.—Roma-Antwerp Long Distance Trial,
in conjunction with Olympic games. Moto
Club Rome.

Club Rome.
Angust 15th.—Turin-St. Nernard Pass (road race).
U.S. Torinese.
August 22nd.—Trophy of the Two Lakes. Moto
Club Lombardo.
September 1st.—Suse-Mont Cenis Hill-climb. La
Torino.
September 5th.—Italian Championship.

Sept. 25-28th.—Milan-Naples Long Distance Trial.

October 3rd.—Speed Trial for the Kilometře
Record. M.C. Lombardo.

Amongst the road races, the most important are the Circuit de Cremona, Circuit de Orbassano, Circuit de Brescia, and Valle Ticino; the hill-climbs, Susaand Valle Tiemo; the hill-climbs, Susa-Mont Cenis and Consuma. An interesting event promises to be the Trophy of the Two Lakes, which takes place on the mountains between Lakes Como and Lugano, well known to so many British tourists. The course is a most difficult one, the roads being either up and down the mountains or alongside the lakes, and is of a very tortnous nature. It is hoped that British riders will support the Targa Florio, as, apart from the interest of the event itself, the scenery met with is alone worth the trouble and expenditure.

BATH - LAND'S END AND BACK.

West of England Club's Second Twenty-four Hours Trial.

THE Bath and West of England Motor Club's enthusiasm for long distance runs continues in evidence. Their first "24 hours" of this year, which some weeks ago knocked out all the competitors, did not daunt the spirit of this live club, and on Friday-Saturday last another run to the same objective-Land's End-produced a much more satisfactory result.

The weather was still unkind, stiff head winds and frequent rainstorms, whilst the roads did not show much improvement over the previous venture.

The first of 22 starters out of 25 entrants left Bath at 8 p.m. on Friday, the 12th, this being E. Colmore, 24 h.p. Levis. The other competitors included C. B. Newman, the club secretary, and E. Kick-

ham, the well-known Bristol agent.'
The sidecar outfits were three "Big The sidecar outlins were times and 4" Nortons, two 3½ h.p. Sunbeams, and one each Indian, Harley-Davidson, and 3½ h.p. Douglas; in addition, there were two adventurous members who essayed the trip on 23 h.p. Douglases, with side-cars attached. It was reported that one of these reached Land's End in safety. The solo mounts were two 21 h.p.

Levises, and one each Alecto, N.U.T., Sun Villiers, B.S.A., 24 h.p. Douglas, and Pearson and Sopwith. The only light car was the 10 h.p. Eric Campbell, which made splendid running through-

E. G. Fery, who put up the best performance in the previous long distauce trial of this club, and who scored so well on his 4 h.p. Douglas and side-car in the Paris-Nice Trial, did not com-pete, his machine having been damaged in the return from France; but he acted as timekeeper, checking in those competitors who were fortunate enough to finish at Bath on Saturday evening.

Survivors.

Eight riders reached Land's End, four or five being "all square" with the time sheet; these were one of the Nortons, a Sunbeam, 3½ h.p. Douglas, Indian, Harley-Davidson, Levis, and the light car. Four of these finished the trip in good order. E. Kickham with the 3½ h.p. Sunbeam and Dinky sidecar was the first to arrive, followed in a few minutes by Victor Smith on the Norton; both these were correctly on time. E. Colmer on

the Levis ran in at about the same time, being a few minutes behind his schedule, but otherwise he had made an excellent run. The Eric Campbell car came shortly after with a perfect score. One or two were expected later, but too late to qualify for medals.

V. Smith and E. Kickham both qualify for the silver cup presented by Mr. G. H. R. Large. The winner will be found from a secret check taken near Exeter on the

return journey.
Both these riders had faultless journeys, and their mounts seemed in first-class order—a really fine performance over 415 miles of bad roads in adverse weather. The Norton was seen departing after the finish with four up. The outward journey was not so hard; rain at intervals through was not so hard; rain at intervals through the night, but when near Redruth, appro-priately enough in the neighbourhood of Hayle, hall was met, and with unusual violence, continued off and on, during the stay at "the End." The crossing of Dartmoor on the return journey was made in thick snow, and heavy rain followed the competitors most of the way to the finish, where an enthusiastic crowd awaited them.

N.M.C.F.U. (SHEFFIELD).

Sheffield and Rotherham Branches of the National Motor Cyclists' Fuel Union Discuss Taxation.

A GENERAL meeting of the Sheffield and Rotherham Branches of the National Motor Cyclists' Fuel Union was held in Sheffield on Saturday last, the 13th inst. The chair was taken last, the 15th inst. The chair was taken at the opening of the proceedings by Mr. John Austin (Swift-Levick works), local chairman, and subsequently by Mr. A. W. Torkington (London), national chairman, in the absence of Mr. Douglas Vickers, M.P., local president.

Mr. W. Wright (Vickers works), local secretary, submitted the Union's annual reports as departed.

report, as adopted on February 28th, and

The president of the Union, Mr. E. S. Shrapnell-Smith, C.B.E., then gave

an address on "Motor Roads, Taxation, and Fuels." He was of opinion that motor cyclists must bear their share of taxation, seeing that roads must be maintained and paid for. The cost of roads would be double pre-war outlay for the same standard. He was satisfied that the N.M.C.F.U. did not desire to escape: they sought only fair play. But fair play for motor cyclists involved three things: (a) recognition of their low average income; (b) regard for relative smallness, alike in power, weight, and size, of their machines; (c) admission by the Government that matters of public health, housing, and food supply are all helped by the use of motor cycles.

.After a full discussion, introduced by After a full discussion, introduced by the national secretary, Mr. D. J. Thornton (Wolverhampton), the bulk of the meeting was in favour of the following annual taxes to replace all existing licensing and fuel taxes: £1 on solo bicycles below 200 lb. weight; £2 ditto above 200 lb. weight; £3 on sidecar outfits and three wheelers outfits and three-wheelers.

Mr. Shrapnell-Smith undertook to lay these views before the Government Com-mittee on Taxation.

The local secretary will be pleased to enrol new members who write to him at 48. Hinde Street, Firth Park, Sheffield, and it is hoped that all local motor cyclists will avail themselves of the opportunity.

THE M.C.C. OPENING RUN.

A Hundred and Fifty-five Members Journey to Brighton.

RECORD number of members sat down A RECORD number of members sat own to dinner on the evening of Saturday last at the Old Ship Hotel, Brighton, whither it has long been the custom of the M.C.C. to hold its opening run, no fewer than 155 being present. All journeyed to Brighton independently, and by six o'clock the majority had arrived. Most of the journey was accomplished in fine weather, but those who started late dinner was followed by a short speech by the Col. Charles Jarrott, O.B.E., who proposed the health of the club, and referred to its sporting members. He was glad to see such a fine attendance, and said that he thought if all this year's competitions were supported so well as the opening run, 1920 would be a bumper year. He congratulated Mr. W. H. Wells on the arrangements for the organisation of the dinner.

Mr. R. Head (chairman), in reply, also made mention of the excellent attendance. and especially congratulated those who had turned up on motor bicycles. The Jarrott cup this year would be something to be earned, the entries were already a record, and it was anticipated there would be about 200. Other events this year would he the Edinburgh run, the team trials for The Motor Cycle challenge cup, and a race meeting at Brooklands.

The president then presented the medals won in the Exeter run, and thereafter followed an excellent musical entertainment, at the conclusion of which were two or three speeches not on the

Mr. R. D. F. Paul proposed the health of the president, who, in reply, contrasted the number of those present with the attendance in 1902—the occasion of the club's first opening run, when, as Mr.

Candler, the only member present who took part in it had told him, only eight or nine members had arrived, and even then only after a continual struggle against adverse circumstances.

Mr. Jarrott then said a few words about the question of petrol prices and taxation. The authorities, he remarked, were anxious enough to ask motorists to come and help them when the country was in difficulties, but now they seemed to infer that motorists were jolly lucky to be allowed to use the roads at all.

Mr. Wells, who organised the dinner so successfully, thanked those present for turning up in such large numbers, and made a few remarks about the club's competitions. He hoped the M.C.C. would get back The Motor Cycle challenge cup this year in the team prize.

The journey back to town was made independently in breezy and cold weather.

CLUB NEWS.

Peebles M.C. and L.C.C.

Peebles is a natural centre for reliability trials of the most strenuous kind. The club is renewing its activities, and is being accorded hearty support by both old ind new members.

Kidderminster M.C.C.

For Saturday next a surprise reliability rial has been arranged, starting from the Lion Hotel at 2.15 p.m. prompt. All nembers are particularly requested to tive their support to this opening event, he entry fee for which is 1s.

North London M.C.C.
Commander Pearce, of the A.C.U., ave an informal lecture at headquarters ecently, during which he outlined the istory and policy of that body. Mrs. T. Staley, of Finchley, has kindly resented a challenge cup. The memership total continues to grow, and wo lady solo riders have enrolled. ne honorary secretary, at 2, Victoria venue, Finchley, N.3.

Surbiton and District M.C.C. Dr. A. M. Low, D.Sc., presided at the pening social concert held recently, and ade important announcements regarding ee club competitions. Five cups, a ced trophy, challenge shield, captain's ize, and various medals will be put for competition this year. Over one indred members took part in the open-run held last Sunday. The captain r. F. Barnes) took the lead, followed solo machines in pairs, sidecars, and, ally, cars. A number of 1920 models re seen, and attracted much attention. e next run is arranged for April 18th, d takes the form of a picnic run to

Coventry and Warwickshire M.C.

Oventry and Warwickshire M.C.

In Friday last the A.G.M. was held
"The Towers," Mr. G. E. Roberts
siding over a good attendance of
mbers. The club's finances show a
stantial balance. Mr. E. Manville,
P., was re-elected president, and
ssrs, A. Wright and Geoffrey Smith,
J.E., were added to the list of vicesidents. Mr. J. F. Spencer is the club
tain for 1920. Mr. V. A. Holroyd
posed the appointment of the Rev. J.
Philpott as the club chaplain.

North Derbyshire M.C.C.

The annual general meeting was held recently at headquarters. The present membership total is about one hundred, with every prospect of a considerable increase. The subscription is fixed at 10s., with an entrance fee of 2s. 6d. Ladies with an entrance fee of 28. of. Ladies are specially invited to join at a fee of 2s. 6d. It is proposed to hold two hill-climbs, two speed trials, and two reliability trials during the year. The opening run to Lincoln will be held on Good Friday.

Carmarthen M.C. and C.C.C.

In conjunction with the Swansea, Neath, and Ystalyfera Clubs, a hill-climb will take place on April 2nd. The event is open to all members of the above clubs, and four events will be run for the following classes: motor cycles up to 300 c.c.; motor cycles up to 400 c.c.; and sidecar motor cycles up to 307 c.c.; and succear outfits and three-wheelers of any power. Entries, together with the entry fee of 2s. 6d., must reach Mr. J. J. Jenkins, Nelson Hotel, Carmarthen, not later than the 31st.

Public Schools M.C.C.

At the recent annual general meeting, it was decided to allow schoolhoys to join the club at a subscription of 10s. 6d., without entrance fee, and to add to the without entrance ree, and to all the list of public schools Blundells, East-bourne, Cooper's Hill, Oundle, and Cranleigh. The following officers were elected: President, Colonel F. Lindsay Lloyd, C.M.G.; hon. treasurer, Mr. C. D. Wright; hon. sec., Mr. H. B. Browning; and a committee of nine, with Mr. E. M. P. Boileau as chairman. The opening run is from the Bear Hotel, Esher, on Saturday next, at 2.30 p.m.

Norwich and District M.C.

A new motoring club, with title as above, has recently been formed, and is receiving excellent support. Mr. W. G. Barnes and Mr. P. V. Howes, organisers of the club, were elected captain and honorary secretary respectively, Mr. G. J. Paul and Mr. W. Howes vice-presidents, and Mr. S. Way honorary treasurer. It is proposed to hold the opening run on Good Friday, or, if the weather is unfavourable, on Easter Monday. Membership amplications should Monday. Membership applications should be sent to the honorary secretary, 35, Prince of Wales Road, Norwich.

opening run last week. Cross Keys and District M.C.C.

Cross Keys and District M.C.C.
On Sunday next the opening run will take place, starting from headquarters, Cross Keys Hotel, at 2.30 p.m. sharp. All actual and prospective members are requested to attend. The latter can obtain all information from the secretary, Mr. A. Dunn, Gladstone Street, Cross

Plymouth and District M.C. and L.C.C.

There was an excellent attendance on the occasion of the first outdoor meet, held on the 7th inst. at the Rock, Yelverton. A speed-judging competition was arranged for the members of the public who were present; this event proved to all the difficulty of accurately judging speeds. A reliability trial to Penzauce and back will take place on Good Friday. The hon. sec. is Mr. L. B. Jackson, Langham House, Plymstock, S. Devon.

N.M.C.F.U. (Barrow-in-Furness).

A membership total of over 200 has now been reached, and there is every indication of a successful year. The open-ing run has been fixed for April 2nd, the destination being to Dungeon Ghyll, via Coniston and Skelwith, returning through Ambleside and Bowness. The year's programme is now decided, including several races to be held on Bardsea Sands, when tides permit.

Newcastle and District M.C.

A club room has been rented at the Grand Hotel for every Friday evening, and an inaugural supper will take place to-morrow, commencing at 7 p.m. A team trial, starting from the Herd's House, North Terrace, at 10.30 a.m., has also been arranged for Easter Monday. It is hoped that the club will show up well in the N.E.A.A.'s competition at Richmond on Good Friday. A novel event is described elsewhere.

Loughborough and District M.C.C.

The opening run was held on the 14th inst., and, although the weather proved unfavourable, was much enjoyed by all. The students of the Technical College one students of the Technical College have decided to form a club, and affiliate to the Loughborough Club. The next run, to Leamington, will be held on the 28th inst., starting from the Bull's Head at 10.30 a.m. The honorary secretary, Mr. K. S. Topping, 64, Frederick Street, Loughborough, will give any particulars.

Club News .--

Lincolnshire M.C.C.

The hill-climb on Easter Monday will be held at Scamblesby, instead of Thonock, owing to the latter being in a loose condition. Members please note.

Sutton Coldfield and North Birmingham A.C.

It is hoped that all members will attend the annual dinner which will be held on the 16th prox., at the Royal Hotel, Sutton Coldfield. The speeches will be short and an interesting musical programme has been arranged. Further particulars will be given at a later date.

Southend-on-Sea and District A.C.

An opening surprise run was held on the 6th inst., and was much appreciated by all competitors. The general idea of the competition was to set observers at various points along the route in order to note any incorrect or inconsiderate driving on the part of competitors. The winners were, in order of merit, Messrs, L. Taylor, Martin, and Alliott.

Cumberland County M.C.C.

On the 4th inst., the annual general meeting was held, when the following officers were appointed : Captain, Mr. I Gibson; vice-president, Mr. J. J. A. Dias; secretary, Mr. M. R. Mawson; and treasurer, Mr. W. B. Anderson. July 7th is the date allocated by the A.C.U. for the open event, which will take the form of a one-day reliability trial in the Lake District.

Bournemouth and District M.C.C.

At a well-attended meeting, held on March 2nd, it was unanimously decided to reorganise the above club. Up to the commencement of the war the club had carried on successfully, but it was explained that its activities were necessarily contributed that its activities were necessarily contributed that its activities were necessarily contributed the successful of the contributed the cont sarily curtailed through the majority of its members answering the common call, thus rendering it desirable at this period to make a new start. A suitable committee was chosen, most of whom are entirely new members, and a comprehensive programme for the comprehensive programme for the coming season is to be drawn up. The opening run will be shortly announced. The new club is already strong numerically, but intending members, of either sex, should communicate with the hon. sec., the Rev. Sargent, c/o Mr. O. Goodman, 50, Grosvenor Gardens, Boscombe.

Birmingham M.C.C.

On Saturday, April 3rd, the annual Easter Reliability Trial for the Sangster Cup will be held from Birmingham to Barmouth. The trial finishes at the latter town, in order to give competitors the opportunity of spending a few days at the seaside. A sporting course has been selected, and every machine, irrespective of its capacity, will be eligible for the premier award (the Sangster Cup) or a gold or silver medal. A special prize, value £5 5s., will be awarded for the best performance of a lightweight under 275 c.c., and a special gold medal for the hest performance by an amateur. Any motor cyclist may participate by becoming a member of the club before the 26th. All particulars may be obtained from the hon, sec., Mr. W. H. Egginton, 76, Earlsbury Gardens, Birchfelds, Birmingham.

Non-stop Run.

Middlesex M.C.C.

The opening run will be held on Sunday next, to the Swan Hotel, Bedford. Members will leave the headquarters, the Red bers will leave the headquarters, the Ked Lion Hotel, Barnet, at'ten o'clock punctu-ally. All motor cyclists interested are invited to attend. The secretary is Mr. S. A. McCarthy, Essex Lodge, 2, Nightin-gale Road, Lower Clapton, London, N.

Hull M.C.C.

A general meeting of this new club, attended by a representative gathering attended by a representative gathering of motorists, was held recently, with Mr. R. P. Garbutt, late captain of the Northallerton M.C.C., in the chair. It was decided that the subscription be fixed at 10s. 6d., and that the club be open to all motorists using motor cycles, light cars, and runabouts. The following officials were elected: Captain, Mr. A. E. Tuton; vice-captain, Mr. R. Thacker; hon. sec., Mr. T. H. Straker; assistant sec., Mr. R. Fearnley; hon. treasurer, Mr. Griffin; trials hon. sec., Mr. B. Hodgson; chairman, Mr. R. P. Mr. B. Hodgson; chairman, Mr. R. P. Garbutt; and a committee of ten. Headquarters have been arranged at Powolny's Restaurant. Intending memhers may obtain all particulars from the hon. sec., 12, Percy Street, Hull.

N.M.C.F.U. (Rotherham).

The monthly meeting was held on th 27th ult., when several new member were enrolled. The secretary was electe delegate for the general meeting in Bir mingham, and the opening run arrange for the 28th inst. The next meeting wi be held on the 26th. Members are requested to fill in the Petrol Petitio Forms, and forward them to the hot sec., Mr. H. C. Bullows, 34, Frederic Street, Rotherham, at the earliest possible research. sible moment.

Sunderland and District M.C.

A hill-climb, for motor cycles an passenger machines up to 1,000 c.c., wi be held at Tunstall Hope on Saturday commencing at 3 p.m. Prizes will b awarded for the following: least varia tion in time of two ascents, fastest tim of all entrants, slowest complete non-sto (motor cycles, with or without sidecar) (motor cycles, with or without sidecar, fastest passenger whicle with at leas one passenger, and for the oldest machin attempting the ascent. The inclusive entrance fee is 2s. 6d., payable up to 2.30 p.m. on the day of the event Application for entries should be mad to Mr. J. A. Broadway, 34, Azale Terrace North, Sunderland.

PALMER TROPHY TRIAL IN SCOTLAND.

WENTY-FOUR competitors-less that half the starters—completed the course with a clean sheet in the course with a clean sheet in the Clasgow Western Club's reliability tria for the Palmer trophy. This, of course is a tribute to the reliability of the drivers but it is probable that a number of the twenty-four would have been less success ful if it had been possible for the cluto retain the originally determined route Unfortunately, Hell's Glen, a difficul proposition at any time, had to be cu out on account of a landslide.

out on account of a landslide.

It has been decided to run an eliminal ing trial on Monday, April 5th, the Glasgow spring holiday, in order to five a winner of the trophy. The trial with twelve hours' reliability trial for the A.J.S. trophy. The course will probable be about 180 miles in length, and eventuaries. stiffer conditions than in the recent triwill be imposed.

We understand that the secret chec could not be used to determine the winne owing to the change of route.

The "clean sheet" competitors in the

recent trial were:

A selection of questions of general interest received from readers and our replies thereto. All questions should be addressed to the Editor, "The Motor Cycle," so, Tudor Street, London, E.G.;, and whether intended for publication or not must be accompanied by a stamped addressed envelope for reply. Correspondents are urged to write clearly, and on one side of the paper only, numbering each query separately, and keeping a copy for ease of reference. Letters containing legal questions should be marked "Legal" in the left-hand corner of carelope, and should be kept distinct from questions bearing on technical subjects.

Repairing an Accumulator.

I have a lighting accumulator from which the acid leaks slightly at one corner. Will you please tell me if there is any substance which could be stuck on the outsice to prevent this ?-G.H.

Ve should recommend you to paint the ige with the liquid (amyl acetate) hich would be found in the accumulator pair outfits obtainable from most acces ry dealers.

Maximum Road Speed.

Can you give me a formula by which the maximum speed of a machine can be obtained, knowing length of stroke, gear ratio used, size of wheels, etc. As a matter of fact, I wish to try and settle an argument, viz., a claim that 68 m.p.h. had been obtained out of an 85 x 88 mm. 1915-single solo, geared at 53 to 1 on top, ridden on a road, and not on a track. Do you think such a speed could be obtained from a machine of this horse-power and date, provided the engine, etc., were in fairly good condition?—P.W.A.

suitable formula can be arrived at, ce even duplicate engines from the same rks may show considerable variation in sed. It is possible that a speed of 68 p.h. might be obtained, since single-inder engines of smaller capacity have seeded 70 m.p.h.

Crank Case Compression.

I have been having a good deal of trouble with the bearings of my 2½ h.p. two-stroke, Although I have only had the machine a few months, I have lready worn out two sets of bushes. his is due—I have since discovered under-oiling on my part, and no lame rests with the makers. How-ver, my painful experiences have hown me the great weakness of ie two-stroke machine. It is so solutely dependent on accurately ting bearings for compression. Once e bearings start to wear, compression immediately lost. An engineer iend of mine suggested the intro-iction of what he terms a "stuffing which consists of a space let to the bush, and filled with tightly cked, well oiled, asbestos. I should obliged if you would give your inion upon this.—R.S.R. stuffing box is really not necessary the main bearings of two-stroke nes, and the trouble should not

c if you pay careful attention to the cation system. Crank case compression, also, is not so vital a point as you appear to imagine, as we have personally known several small two-stroke engines which would run almost equally well with the crank case drain tap either open or closed.

Carburetter Troubles,

Please tell me the cause of the following trouble with my 35 h.p. single-cylinder machine, which has been running well until the last month or so: (1.) The engine misfires at slow speeds, but runs well if I keep the extra air nearly wide open. The sparking plug is quite clean, and the magneto in good order. (2.) Very high petrol consumption. Is the jet too large? (3.) A curious whistling noise in the vicinity of the carburetter at certain speeds .-- A.F.K. (1 and 2.) In the ordinary way, misfiring at slow speeds would be caused by worn at slow special work as worn air slide in the carburetter, or air leaks at the carburetter or induction pipe unions, but in this particular case the jet is probably

too large, which would account for the high petrol consumption. (3.) This is nothing, merely the noise of the air entering the carburetter, and has no

effect on the running.

Pre-ignition.

(1.) Please tell me why my 2³ h.p. twin will suddenly slow up and stop when ascending steep hills. This has occurred steep hills. frequently when the machine has been coming up very easily on bottom gear. I might add that it will immediately start off again. There is no dit or blockage in the carburetter or inducor blockage in the carbifecter of induc-tion pipe. (2.) Also, please tell me whether a slipping sensation which occurs is in the gear box or caused by the belt, which is on the loose side.

-J.H.N. (1.) The trouble is no doubt due to preignition, caused by the use of an unsuitable plug, the electrode of which becomes red hot. (2.) The slip will be in the helt.

Retarded Ignition,

I recently bought a singlecylinder four-stroke lightweight motor cycle, and I have had much trouble with its starting. I have been overhauling it, and have retimed the engine, thus: Ex-

haust valve begins to open about $\frac{3}{16}$ from the bottom of exhaust stroke and shuts top dead centre, and, as the two valves are operated from the same cam, the inlet valve is naturally correct. The spark is timed top dead centre of firing stroke. The magneto has no advance or retard. The spark tis rather weak, but the current, by touching the terminal, is almost unbearable, and when I lift the exhaust lever, and push the machine on the road with the other hand on the saddle, I get a shock in my hand. The Amac carburetter is fitted with a No. 28 jet. Can you tell me why it is that the petrol I inject in the inlet valve does not fire, and whether the engine is timed correctly or not? I do not get any sort of firing from it .-T.D.J.

The valve timing of your engine is cor-The valve timing of your engine is correct. The ignition timing, however, is too late. With a fixed ignition magnete on an engine of this size the spark should occur 8 mm. before the piston reaches the top of the compression stroke. Your remarks concerning to stroke. Your remarks concerning a shock through the frame of the machine are rather vague—certainly, if you experience this, the high-tension lead from the magneto is short-circuited, and we the magneto is short-circuited, and we should suggest that you fit a new wire. The 28 jet is a large size for this engine. Probably, the magneto requires overhauling, or, maybe, a new sparking plug would solve your difficulty.

Most Suitable Gear Ratio.

ş

Would you be good enough to inform me as to the correct gear ratios for a 1919 4½ h.p. single-cylinder three-speed sidecar machine?—A.R.D.

The most suitable top gear ratio for such a machine with sidecar is 5 to 1. In very hilly country it might be an advantage to lower the top gear to 5½ to 1, but under ordinary circumstances this should not be necessary.

Improving Consumption.

I ride a 1919 6 h.p. A.J.S. and sidecar, top gear approximately (according to makers' specification) 4.9 to 1. I can only obtain about 50 m.p.g. Amac carburetter, jet 26. Timing exactly as when delivery of machine was taken in July of 1919. I always use Grade 1 petrol. The machine runs exceedingly quietly and very consistently, is a splendid hill-climber, and quite easy to handle in traffic. My only concern is the petrol consumption. Can you suggest anything which might be done to improve this, as I have met other A.J.S. riders who claim to be doing 60 and 65 m.p.g.?

—A.W.P.

50 m.p.g. is quite a normal consumption for a 6 h.p. machine with a sidecar. You might effect an improvement by slightly advancing the ignition and also by lowering the collar on the float chamber needle until there is barely 16 in. play left between the latter and the float. This will prevent unnecessary flooding.

Ownership of Stolen Machine.

Recently I purchased a second-hand machine which cost £80. After having it about one month it was confiscated by the police, who said it was stolen, and had passed about six hands before reaching me. The person from whom I bought it purchased it from a-garage. Is it a fact that in the case of a stolen cycle passing through a garage a legitimate buyer becomes entitled by law to the machine and the garage is responsible? The police say, at my last interview with them, that they have discovered the thief, but they also think he has gone abroad. Can I do anything at once for the recovery of the machine or the money? I might mention the cycle was insured by the original owner, and his claim was paid on the loss of the machine. Does this complicate matters?

The goods having been stolen, the property therein remains in the original owner, and no one of the subsequent purchasers could possess any better title to it than you have, which, of course, is none at all. Consequently the original owner is the only party entitled to the motor cycle. Under these circumstances you have the right to recover the amount you paid for the motor cycle from the person from whom you bought it, and that person could sue the garage proprietor, and so on. The question of the original owner effecting an insurance does not alter the position in any way, except that the insurance company would be entitled to reclaim the amount they paid to the original owner less the value of any damage done to the machine.

MOTOR CICLE

READER'S REPLY. Generator Troubles.

Referring to the trouble of "D.J.B." mentioned in your issue of February 12th, I should like to give the following tip. Being long troubled with the continual going out of my rear lamp, I tried removing the felt pad in the generator and stuffing the space it had occupied, fairly tightly, with ordinary cotton wool. The result was excellent, and I have had no trouble since. I change the cotton wool every now and then, as it becomes sodden with moisture. This entails a little extra work, but I find it worth the time spent, as both head and rear lights are much steadier, due, I suppose, to the extra pressure required to force the gas through the packed wool.—AJ 425.

EXPERIENCES WANTED.

"T.J.B.P." (Bournemouth).—Two-stroke machines of 350 c.c. or greater capacity (with sidecar).

(with sidecar).

"F.D." (Kingston). — Binks carburetter on 2½ h.p. single-geared two-stroke.

stroke.

In the Springtime.

THERE are hardy riders who indulge in the pastime of motor bicycle riding all through the year. They are, of course, glad when springtime comes round, but not so glad as the fair-weather rider, who, for the first time after the long and dreary winter, takes out his machine in the balmy air of early April. The weather is not too hot, the air is bracing and invigorating, the daylight saving has just come into force, and long rides may be taken without there being any necessity to light the lamps. At this time of the year a run in the open country, when the buds are bursting, invigorates the body, refreshes the mind, and gives health and enjoyment to the jaded worker.

Before the machine is taken out from its winter quarters, it should be carefully overhauled and thoroughly cleaned. The process of cleaning has other advantages than merely making the machine beautiful. Often when washing down the crank case, brushing between the brake controls, and removing all traces of dust and mud, loose nuts and frayed control wires are discovered, and the rider has an opportunity of putting these in order before riding is begun. The tyres should be carefully examined, pumped up hard, and left to see if they will stand the pressure; all moving parts should be lubricated, the reservoirs filled with oil and petrol, lamps cleaned and filled in case one is overtaken by darkness, and then all is ready for the full enjoyment of the English springtime.

The roads still suffer from the indirect effects of the Great War. We are often asked if such and such a road is in good condition. questions are difficult to answer; all that can be said is that most roads are in very fair to good order, Bad stretches are often encountered, but they are not, as a rule, of any considerable length; and, happily, our roads have not suffered so badly as those in France and Belgium, in which countries it will probably take years to render them rideable with comfort.

Progressive Design.

T gives us considerable pleasure to be able to describe in this issue a new motor cycle, features in the design of which will go far to satisfy popular cravings. It incorporates light weight, ease of control, two speeds, entirely enclosed transmission, accessibility, automatic lubrication, interchangeable wheels, and pressed steel open frame, and it can be hosed down for cleaning purposes. All these features have been demanded separately many times during the past, and here we have them combined in a neat and practicable form and marketed at a price which compares favourably with that of some scooters.

Mass production and practical design are the main features which enable this end to be accomplished, and we cannot emphasise too strongly the importance of this latter point.

Designers who are contemplating new models would do well to study shop production to a greater degree than in the past, and to bear in mind the fact that it is not necessary to sacrifice efficiency in order to obtain quick production. In fact, in many existing cases it would be easier to produce a more up-to-date and scientific design.

Engines, gear boxes, transmission, and frames have become so standardised in main essentials that those responsible for design and manufacture appear to be frightened of any form of change; and, so long as this is the case, progress will be slow or non-existent, and we shall have to rely entirely on newcomers who design and manufacture on up-to-date lines for any advance in motor cycle practice. Fortunately, there are a few who realise this, and it is to be hoped that they will prove strong enough to fight the apathy which undoubtedly exists at the present time.

All branches of engineering have progressed so rapidly of recent years that it is a pity that motor cycles should lag behind, as is undoubtedly the case.

SCOTTISH TOURS.

EDINBURGH, Dalbeith, over the Moorfoot Hills to Innerleithen, cross the river, and proceed direct south to Varrow Water, take right-hand turn skirting north side of Saint Mary's Loch, avoid right turn and proceed to Tibbie Shiels; direct route to Mofat, main road by Devil's Beef Tub, avoiding left turn at top of hill, and stick to main road to Edinburgh vin West Linton if desired. This route is about 70 miles, and includes much wild, mountal nous country, particularly in the Saint Mary's Loch district. It is a sporting route with many attractions.

An easier and less hilly route encircling the Lammermuir Hills, which would perhaps be preferable if weather is cold, would consist of stirting the coast via North Berwick, thence via Dunbar and Ayton to Chirnside, Nuns, Lauder, Dalkeith and Edinburgh. About 100 miles.

On the Devoust

GLASGOW, follow north bank of Clyde to Dumbarton, Helensburgh, Garelochhead, proceed along east shore of Loch Long to Arrochar flotely, direct route across height of land to west shore of Loch Lomoad, proceed south to Balloch, and return Dumbarton to Glasgow. About 70 miles. This route comprises much fine loch scenery and no bad bills.

A really sporting and difficult route recently undertaken by the GLASGOW, Western Club in their Palmer Tropby Trial is as follows: Inverbeg, Anniesland, Canniesburn, Bearsden, Old Kilpatrick, Dumbuck, Balloch, straight up west shore of Loch Lomond to hotel at Inverbeg, proceed over height of land down Glen Douglas (exceedingly dangerous hill) to main road, skirting east shore of Loch Long, Arrochar, up Glenece and Rest-and-Be-Thankini to Loch Restlinds, and the control of the Company of the Compa

THE MIDLANDS, WALES, SOUTH AND WEST OF ENGLAND.

LIVERPOOL (ferry to Birkenhead), Queensferry, Mold Ruth'n Corwen, Pentre-Vechas, Bettws-y-Coed, Llaurwst, Colwyn Bay Abergele, Rhuddian, Hollywell, Northop, Queensferry, Birkenhead, Livetpool. Approximately 150 miles.

MANCHESTER, Cheadle, Wilmslow, Congleton, Bosley, Rud-yard, Leek, Ashbourne, Mappleton (Dove Dale), Youlgras, Rowsley, Bakewell, Buston, Chaple-en-le-frith, Hayfield, Glossop, Hyde, Manchester. Approximately 130 miles A run taking in Rudyard Lake, some of the Derbyshire dales.

LEEDS, start from Dyneley Arms (crossing of Leeds-Otley and Bradford-Harrogate roads). Pool, Harrogate, Ripley, Pateley Bridge, Greenbow, Jeft. at Hebden to Burnsall, Barden Tower, Belton Abbey, Addingham, Ilkley, Otley, Dyneley, A sporting run of just under 60 miles, readily available from Leeds, Fradford, Wakefield, or Halifax. Many single figure grad-ints, both up and down.

NOTTINGHAM, Ripley, Matlock, Bakewell, through Monsal Dale, Tideswell, Chapel-on-Frith, Buxton, Bakewell, Matlock, Ripley, Nottingham: 94 miles. A run through fine Derbyshire scenery; no difficult hills.

NOTTINGHAM, Thurgarton, Southwell, Newark, Kelham, Ollerton, through the Dukeries (Sherwood Forest) to Worksop, Mansfield, Nottingham; 2,4 miles.

An interesting route through historical districts and pictures are series.

turesque scenery.

PLYMOUTH, Devonport, take the ferry to Torpoint, Anthony, Pollsathie, Menheniot Stetion, Listend, Dobwalls, past Doublebos Station into the beautini Giskerd, Dobwalls, past Doublebos Station into the beautini Giskerd, Downston, or of which, turn R. for Bodmin, whence it is hilly to Wadebridge, again turn R. through St. Kew Highway, Camelford (whence a trup can be made to Trebarwith and Tintagel), Davidstow, Piperspöol, Lannesston, Milton Abbot, Tavistock, Velverton Station, Plymouth. Approximately a parmile run through levely scenery.

landing Stage Bala Lake, North Wales

Comfort Before Noise.

N the last Six Days the A.C.U., with Dr. Low's aid, surmounted one great technical difficulty, and managed to hold a silencer test without dragging in all the fuss of laboratory experiments. As an incurable hater of silent motor cycles, I restrained my pen on this topic, knowing that on this question I am in a minority, and that it is the badge of minorities to suffer. Silence may be a controversial matter, but comfort is not. I have ridden through most of the Six Days Trials held on British soil, and I have tackled them on every conceivable type of 'bus. On some occasions I finished each day with an aching back and stiffened wrists. On others I burbled gently in to the night hotel, feeling at peace with all the world, thanks to the splendid insulation of my machine. There is surely something amiss with a Six Days Trial which, whilst ostensibly conducted to inform the buying public which motor cycles most nearly meet their requirements, yet absolutely ignores comfort-a point which most utilitarian riders value above most features.

A Jury or Apparatus?

THE A.C.U. is, of course, acquitted of all blame for this omission by the obvious fact that it is so difficult to devise a test of comfort which shall classify a hundred machines rapidly and accurately. Is the problem insuperable? It could be tackled in two obvious methods. When the A.C.U. trials staff includes a gentleman who can cinematograph the pitting of an exhaust valve, or words to that effect, he could surely devise some apparatus in the form of an Earl's Court wiggle-woggle with a recording pencil, which should instantaneously give a comfort-graph of each machine as it passed over a platform countersunk in a bit of private road; and the job would not bother him more than changing a plug. My friend Captain Aston did the trick with cars by attaching electric bulbs to the salient parts of the chassis, and photographing the bus as it rocketed over pot-holes in the dark. Such a recondite mind as Dr. Low possesses would surely evolve a far simpler

method. But if Dr. Low refuses to rev. freely in response to tactful suggestions by Mr. Loughborough, what about a jury of motor cyclists?,

One Way of doing it.

JOU prepare a hundred yards of assorted abominations in the way of bad road surfaces-strips of new metal in three sizes, grease, ruts, potholes, etc. You station half your entry at each end. You procure a dozen amateur riders, middle-aged men of average stature, John Citizen, "Poy" type. Each of the jury rides a machine across the prepared strip, picks up another at the far end, rides that back, picks up another, and so on, till he has worked through the entry. No fine classification is attempted—just three classes, "good," "medium," and "bad." Second trips are taken about any machines on the borderline between two classes. In all previous trials we have wasted many hours pottering at legal limit along untold miles of level highway in good condition. Such "making up mileage" is inevitable to some extent, as it takes us to where steep hills grow, or capacious hostelries exist; but a great deal of this easy going is included to swell the distance to some conventionally rotund figure, and the time would be better spent in a really informative test.

Steadiness on Grease.

WHEN I am picking my way over really slimy grease on a two-wheeler, I generally feel a transient enty of any car that comes along; but the vantage is not all on the side of the four-wheeler. Not far from my house there is a two-mile climb, largely sunk in a cutting which retards drying of the surface, and exacerbated by an over-cambered road. You can get skids here: long after the rest of the district is safe. I went up and down this hill on a bicycle one day last week, and later on I repeated the journey as a passenger in a small car handled by an expert. The surface was identical on the two runs, but whereas my Scott with Palmer cords never swerved by half an inch, either descending or ascending, the car threatened to get right out of control until its speed was sternly curbed.

ed.

A LTHOUGH, in some quarters there appears to be some doubt as to whether the T.T. Races will be run this year, there is no doubt that a large section of the trade and the public are looking forward to the event as a test of some of the new designs which have been introduced since the end of the war.

event as a test of some or the new designs which have been introduced since the end of the war.

Much speculation is rife as to the particular types of engines which will secure the honours for the Senior (500 c.c.), the Junior (350 c.c.), and the class for 250 c.c. machines which will compete for The Motor Cycle Trophy. It is therefore interesting to review past races since the

first T.T. in 1907.

It may not be known to the average newcomer to the world of motor cycles that in 1907 and 1908 single and multi-cylindered machines raced separately, and it is perhaps curious that a firm now famous for its singles won the twin event and a concern now known for its big twin won the single-cylinder race. A 3½ h.p. Matchless, ridden by C.R. Collier, won the "single" event, and H. R. Fowler, on a 5 h.p. Norton, secured the "multi" race. The next year J. Marshall (3½ h.p. Triumph) and H. Reed (5 h.p. Dot) were first in their respective classes.

In the 1909 event the singles and multi-cylindered machines were raced together, the singles being limited to 500 c.c. the twins to 750 c.c., and, as was to be expected perhaps, the latter secured first and second places, for twins had been developed during the preceding two years, and the average speed of the winner was almost equal to that of C. G. Pullin, who won in 1914. The times for the 1909

race were as under:

 I.
 H. A. Collier, 5 Matchless (738 c.c.)
 49.01

 2.
 G. Lee-Evans, 5 Indian (714 c.c.)
 48

 3.
 W. F. Newsome, 3½ Triumph (499 c.c.)
 44.9

For the 1910 race, the maximum of the twin capacity was reduced to 670 c.c., and the result was the same as the year previous, i.e., twins first and second, single third:

Average Speed.

1. C. R. Collier, 5 Matchless (666 c.c.) 50.6

2. H. A. Collier, 5 Matchless (666 c.c.) 49.2

3. W. Creyton, 3! Triumph (499 c.c.) 47.9

In 1911 a further reduction was made in the capacity of the twins, this time the limits being 585 c.c. and 500 c.c. for twins and singles respectively, and 34 h.p. twins secured first, second, and third places:

 1.
 O. C. Godfrey, 31 Indian (584 c.c.)
 Average Speed.

 2.
 C. B. Franklin, 31 Indian (584 c.c.)
 47

 3.
 A. J. Moorhouse, 31 Indian (584 c.c.)
 46

1912 saw the singles and multis running on equal terms for the first time, and the single secured second position, as it did also in 1913; but in 1914 it finished first, with a

single and a twin tying for second place and another twin fourth.

The results of these three "level terms" races are therefore of greater interest at the present time than the others:

	1012.	-
		rage Spec
Ι.	F. A. Applebee, 31 Scott (486 c.c.)	48.6
2.	J. R. Haswell, 3½ Triumph (499 c.c.) H. A. Collier, 3½ Matchless (496 c.c.)	47.2
3.	H. A. Collier, 32 Matchless (496 c.c.)	46.5
	1913.	
	H. O. Wood, 31 Scott (486 c.c.)	48.28
2.	A. R. Abbott, 31 Rudge (499 c.c.)	48.27
3.	A. H. Alexander, 31 Indian (496 c.c.)	47.6
	- 1014.	
Ι,	C. G. Pullin, 31 Rudge (499 c.c.)	49.9
	{H. R. Davies, 3½ Sunbeam (499 c.c.) } O. C. Godfrey, 3½ Indian (498 c.c.) }	48.3
٠.	O. C. Godfrey, 31 Indian (498 c.c.)	
4.	H. V. Colver, 31 Matchless (496 c.c.)	48.3

Thus, in those Senior T.T. Races, when singles and multi-cylindered machines were run on equal terms, singles secured one first and three second places, V twins one second and two thirds and one fourth, and two-stroke twins two firsts (the total of ten in three races is brought about by the tie for second place in the last race).

The Junior Races.

Of the four Junior Races, only one has been won by a single, i.e., in 1914. 1914 was certainly the single's big year, for, as in the Senior Race, this type of engine secured first and second places. In the first race (1911) a single was second, and in 1913 third.

The results of the four races were as follow:

	1911,	age Speed.	
τ.	P. J. Evans, 27 Humber (340 c.c.)		-
	II A Collins Metables (340 C.)	4X.5	
2.	H. A. Collier, 2 Matchless (297 c.c.)	391	
3.	H. J. Cox, 21 Forward (339 c.c.)	38	
	1012.		
Ι.	W. H. Bashall, 2 Douglas (350 c.c.)	39.6	
2.	E. Kickham, 27 Douglas (350 c.c.)		
	E. Mickiani, 21 Douglas (350 c.c.)	38.8	
3.	H. J. Cox, 23 Forward (344 c.c.)	36.5	
	1913.		
τ.	H. Mason, 27 N.U.T. (341 c.c.)	43.7	
2.	W. F. Newsome, 21 Douglas (356 c.c.)	43.6	
	TI C Newsonic, 21 Douglas (350 c.c.)		
3.	H. C. Newman, Ivy (346 c.c.)	41.7	
	1014.		4
I.	E. Williams, 27 A.J.S. (348 c.c.)	45.6	
2.	C. Williams, 27 A.J.S. (348 c.c.)	44.7	
3.	F. J. Walker, 3 Enfield (345 c.c.)		
3.		43.3	

Thus in the four Junior Races we have singles securing one first, two second, and one third; V. twins, two first and three thirds; flat twins, one first and two second. Again, it would appear that all types have an equal chance of winning the 1920 race.

MOTOR (YCLE

This Year's T.T .-

So far the single-cylinder two-stroke has not figured conspicuously in either the Senior or Junior Races, but in some quarters it is thought that the great advance made since 1914 in this type of engine makes the single-cylindered two-stroke a formidable opponent of other types for this year's Junior at all events, while it seems not unlikely that The Motor Cycle trophy for 250 c.c. machines will be won by one of them.

The winner's speed in the Junior Race of 1914 was 45.6 m.p.h. A 23 h.p. Levis (349 c.c.) ridden by P. Pike, was placed thirteenth, the average speed P. Pike, was placed infreenin, the average specu-being 39.7 m.p.h., a similar size Peco being twenty-second at 37.2 m.p.h., while a 2½ h.p. 1y, having a capacity of 269 c.c., secured twenty-eighth position (30.6 m.p.h.), with a 349 c.c. Levis thirtieth (28.3 m.p.h.).

Two-strokes, therefore, have proved that they are capable of surviving the severe gruelling of a T.T. Race. There are other types of engines, such as three-cylinder radials, which have been introduced recently, among which there are possibilities of some surprises.

A Single-cylinder Advocate.

REGARDING which type of engine will carry off the respective races, Eric Williams, present holder of the Junior

trophy, predicts another victory for singles.

"Each enthusiast has his particular favourite," he writes, "but rarely can he answer with genuine facts why it should stand the best chance. Others say the race is more or less a lottery, like a horse race. True, the rider has nnly to pick up an inconsiderate nail to put him out of the running

"As for the machines, there are only a few manufacturers who can turn out a machine that will average 50 m.p.h. on those 200 miles of rough road, with all its corners and ever-varying gradients

and descents.
. "Doubtless we shall have some surprises in engine and gear designing; aluminium alloy slipper pistous should be fairly general, overhead valves, lighter steel flywheels better

balanced, and the all-important gear ratios with more of them.

Personally, I predict another victory for the single in each race, built much lower and more compactly with four or more gears, but the twin two-stroke will want some watching, and will be a hot favourite. With young and new blood in the saddle, it will be a hot and exciting race, and, if not reckless, worth going a thousand miles to watch."

Opinion of the Senior T.T. Winner.

G. PULLIN, who won the Senior event in 1914 on a Rudge-Multi, is undecided between two-strokes and four-stroke singles. "Eliminating the human element," he says, "and bearing in mind he severe and hilly nature of the course, one would xpect to find the successful engines among the class iving a good power output over a considerable range I speed, and also capable of maintaining their output hroughout a continuous and strenuous period. Fuel onsumption within reason can be neglected. Results hould therefore he looked for amongst the two-troke engines, especially the water-cooled type.

"Personally I expect to see the Senior Race won

y either a two-cylinder water-cooled two-stroke, or single-cylinder side-by-side valve air-cooled four-roke engine. I think the flat twins will put up a better showing than previously, but additional complications and lack of experience in these larger type engines leave much to be desired to make them serious competitors,

"The Junior Race, I anticipate, will be won by a single-cylinder air-cooled side-by-side valve machine, its only serious competitor being the flat twin of this capacity.
"The 250 c.c. lightweight class will undoubtedly be won

by an air-cooled two-stroke engine, as the amount of work a specially tuned engine of this type will do is wonderful.'

II. ALEXANDER, who was third in the Senior Race of 1913 on an Indian twin, favours the V or a flat of 40, 47, and 55 m.p.h. for the 250, 550, and 500 c.c. classes. Writing from Edinburgh, he states his opinion that "the 250 c.c. Tourist Trophy Race will be won this year by a two-stroke machine, chiefly because of the superior hill-climbing and

the superior hill-climbing and 'pick up' of these engines over the 250 c.c. four-stroke engines. The 350 c.c. race will, I think, be won by a 'flat twin' fitted with three or four-speed gear, with an extra high 'emergency' with an extra ligh 'emergency gear. These machines, owing to their 'revving' qualities, will be as fast down hills as the fastest big machines, and it must be remembered that a considerable part of the course is downhill.

"For the Senior Race, I favour again a flat twin or V type twin, both fitted with overhead inclined valves, and again I would say a three or four-speed gear, for the latter of which I think there is till need, owing to the large variations of uphill and downhill gradients on the T.T. course.

"A combination of one of the

above types of engine, with an 'infinitely' variable gear such as the Zenith, would stand a strong the Zeniui, would statud a strong chance, and the Scott should again be well in the running, provided, of course, they are entered, which, apparently, is a doubtful point. With a representative entry, I would put the average speeds of the winners as 40, 47, and 53 m.p.h. respectively."

(Top) Cyril G. Pullin, holder of the Tourist Trophy (shown below), which he won in 1914 on a Rudge. (Bottom) Eric Williams, riding an A.J.S., won the Junior T.T. in the same year.

THE winner of the twin event in 1907, H. Rem Fowler, does not consider the conventional twostroke as a possible winner, except in the 250 c.c. class. "I think," he says, "that it will be a toss up between the four-stroke twin and four-stroke single. In the twin you have greater flexibility and acceleration, and in the single simplicity and stronger working parts, hence greater reliability.

I do not think the two-stroke will have much

chance, with one exception, and this, in my opinion, does not properly represent the type, being watercooled. In the mediumweight class I rather favour the twin, as in this particular size engine the type seems usually more efficient and much faster on this course, as rapid acceleration and flexibility count so much. In the real lightweight class I think the air-cooled two-stroke should win."

air-cooled two-stroke should win.

F. A. Applebee the Senior winner in 1912, considers past experience of greater importance than a positionar engine type. "The the question of any particular engine type. "The result of the T.T. Race has never been a foregone conclusion," he writes, "and it is, in fact, the glorious uncertainty that makes this event so popular amongst motor cyclists. Very little help can be obtained by studying the results of previous races, as these show that the honours have hitherto been fairly equally divided between the different types of engines. One cannot help thinking,

The Tourist Trophy.

This Year's T.T .--

however, that past experience counts for a good deal, and for that reason I shall be more than surprised if those manufacturers who have done well in the past do not carry off premier honours this year. Further than that I do not feel disposed to go, for I am personally of the opinion that at the start of a T.T. race it is fairly safe to assume that a dozen riders will be in the running for premier honours, and that the ultimate winner will be the one whose lucky star was in the ascendant that day.'

own with the four-stroke of equal capacity. Some of the new flat twins might provide a surprise, but I think this is rather unlikely. Taking all things into consideration, I think a single-cylinder four-stroke to be the likeliest winner.

Each type appears to have an equal chance, but it is interesting to take the matter further. In the 1914 Senior Race there were seventeen awards. Single-cylinder machines were first, second (tied), fifth, minth, eleventh, twelfth, thirteenth, fourteenth, and sixteenth. V twins: Second (tied), fourth, seventh, eighth, tenth, fifteenth, and seventeenth. Flat twins: Sixth. A two-stroke twin came eighteenth.

If we take the first dozen

finishers in the last Junior event, we find that the twins show up to advantage. Singles were placed first, second, fourth, and sixth. V twins: third, fifth, eighth, tenth, and eleventh. Flat twins: seventh, inith, and twelfth.

It will thus be realised that there appears no decided reason why any particular type of engine should win the T.T. races this year.

J. R. Haswell, who ran second in the 1912 Senior Race, favours "a good, healthy single in a machine that is easy to steer." This latter point is a very important factor. "I favour," he says, "for the T.T. a

good, healthy single in a frame that will steer. frame that will steer. Such a machine will take a lot of catching in the Senior Race. Gears, con-trols, steering, and a comfortable riding position help to win as much as the

"An old T.T.-ite has almost an unfair advantage over the newcomer.

A few trips round and he is quite at home. It takes a new pilot some time to get accustomed to the course."

The second prize winner in the last Junior event, Cyril Williams, is in favour of the single-cylinder four-stroke for all events. He writes as follows:

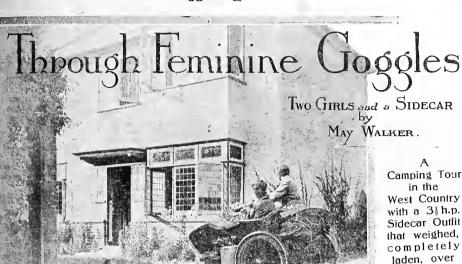

"In my opinion, a single-cylinder four-stroke will win the Senior, Junior, and The Motor Cycle Trophy. For high efficiency and ability to stand hard work, such as an engine gets in the T.T., it is unsurpassed. I do not think the air-cooled two-stroke yet capable of holding its

ROAD SCENES DURING THE LAST T.T.

8 cwt.

FTER years of motor cycling, a holiday of several weeks in one vicinity promised to be boring, so early last August a girl friend and I decided to have a camping tour with a sidecar. Our equipment included a 31 h.p. Ariel outfit, a folding tent, two sleeping bags and eiderdowns, a small methylated spirit cooking stove, aluminium saucepan, kettle, and frying pan, tins for butter, tea, and cocoa, a Thermos for milk, and various other

items too numerous to mention. Strong straps held our kitbags to the luggage grid, and the interior of the sidecar and the footboard were adorned with various camera cases serving to hold

toilet requisites, etc.

The tent was made for us, at a cost of £3 10s., by Messrs. Edney, of Boxmoor. It measured 4ft. 6in. x 6ft. 6in. and 6ft high. It folded or rolled into a neat canvas bag. A light tarpaulin was carried to cover the machine.

A Heavy Load.

It was some trouble getting the whole outfit on the machine; however, with a little ingenuity it was achieved, and the total weight with driver and passenger aboard turned the scale at 8 cwt. Truly a big

load for a 3½ h.p. engine!
We made Oxford our starting point, and called on friends near Abingdon, refusing their offers of hospitality beyond permission to pitch our tent on their back lawn for our first night under canvas. We were away soon after breakfast, passing through Wantage, then away along the Swindon road to Faringdon. We just skirted Swindon, and met large crowds of workmen going to their mid-day meal, and a very goodnatured set they proved to be, being most anxious to direct us on the way to Bath.

Near Chippenham we met two women touring on push bicycles. They were laden, like ourselves, with much luggage and the usual camera, and we thought they glanced enviously at our superior mode of travelling.

Approaching Bath we had some splendid views from the top of the hills that surround the classic spa, and on a long run down into the ancient city, we found our rear brake block was so worn that it was almost useless. Although we tried every garage in the town (and in many other towns also), we were unsuccessful in finding a block to fit. Later on, the Ariel Co. were good enough to send us a replacement.

Leaving Bath, we had a good climb on to the hills again, but the Ariel plodded steadily on, and I began to think that I should not have to shed my passenger so many times as I anticipated when planning the tour.

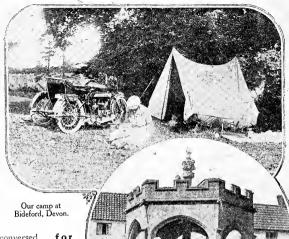

We had tea on the side of a hill, and filled our kettle from the depths of a cavern down some mossgrown steps. I will admit I did not altogether like the idea of using water from a dripping well, but a cottager smiled at my fears.

The town of Wells was a revelation; directly we entered the town we felt the atmosphere of the place. It seemed almost a sacrilege to make a noise in the vicinity of the cathedral, or to pass through the

wonderful archway in the road.

A Two-day Location.

Day was drawing to a close, and we wanted to reach Cheddar before pitching our tent for the night, so on we sped. However, Rodney Stoke was our sleeping place, and on reaching this hamlet we approached a lady farmer for permission to camp in her meadows. She directed us to the sheltered way under her window, and it was not until we had

conversed for some time that we discovered that Cheddar was three miles further on. Our new friend was so anxious to be hospitable that we decided to stay in her cheddar.

we decided to Chedar.

stay in her
grounds for a day or so, especially as such necessities as milk and eggs were readily obtainable from the farm.

Leaving our camp standing for two days, we scoured the neighbourhood of the famous Chedar Gorge. Then we went on to Weston-super-Mare, "Civilisation," it must be admitted, was a poor attraction compared with our roving life off the beaten track.

We made for Glastonbury, with its ruins, through Bridgwater, over the Quantock Hills, where we had our first taste of the red dust of the district. Then on to Watchet, with its quaint little quay, and up the hills out of the town to camp for the night near a farm that overlooked the sea.

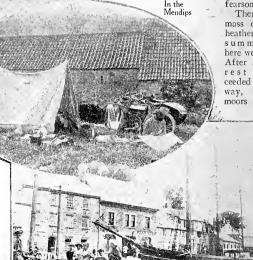

In the "West Countrie."

Next day we were following a winding road alongside the River Exe, between lofty hills thickly clad with trees, and down "Rest-and-be-Thankful" Hill, which proved a long trying slope now that timber waggons have cut the surface into ruts a foot deep. We camped near Timberscombe, a hamlet at the foot of Dunkery Beacon,

and we thought of the robbers of Exmoor, but after a day in the open one sleeps too soundly for the ghosts of Blackmore's characters to disturb one's dreams.

An early breakfast of bacon and eggs deliciously cooked on our picnic stove, and we were off again through Dunster, where we made a halt to secure photographs, and then on to Minehead. was still comparatively early in the day -before ten o'clock, in fact-and the morning mists still hung over sea and We were anxious to make the acquaintance of Porlock Hill, so we steered that way. At the foot of the famous climb we debated whether we should attempt to scale it, but our heavy equipment made us favour the new motor road, although we were told by the natives that the surface of the new one made it as difficult to climb as the other. Paying our sixpence toll at the gateway, we soon found that it was miles of bottom gear work, and bad surfaces with nothing on our right hand but a flimsy piece of wire netting between us and space. It seemed an immeasurable depth into the ocean, but the joy of riding in such country banishes fear, and with a good machine well equipped as regards brakes, the tourist need have no qualms about

Low tide in Padstow Harbour.

Through Feminine Goggles .-

mouth by way of Countisbury, and I must admit that I was far from happy descending this well-known hill, especially as there was a rapidly moving car behind me. When the car driver approached me and asked if I could direct him out of that part of the country, as he had burnt out one of his brakes, it was apparent that there had been good reason for my nervousness.

We decided to camp in the Doone Valley, and although it is supposed to be one of the loneliest spots in England, we were not the only camping party in the" Land of Lorna Doone." Incidentally, we paid a half-crown camping fee here, the first

charge of its kind that we were

asked to pay. We stayed a few days camping on a farm near Bideford, during which time we visited Westward Ho! and Clovelly. Then we followed the road to Crackington Haven, a wild and, as yet, unexploited corner of the North Cornish coast. That night St. Juliot provided an ideal camping ground, and, after a lesson from the farm people in the art of snaring

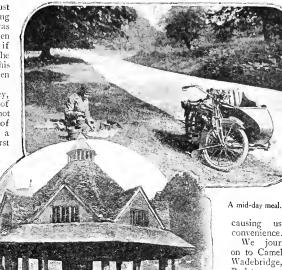

rabbits, we went on to Bos-

castle. Fortunately, it was a

run down of two miles into this place, as we had foolishly run out of petrol.-The spirit with which we were supplied was of very inferior quality,

> Old Cottages Dunster.

> > On the coast at Westward Ho.

Butter Market, Dunster.

causing us inconvenience.

We journeyed on to Camelford, Wadebridge, and Padstow, near which place we came upon a large motor caravan. We envied the owner, for a more ideal means for

touring can scarcely be imagined; the driver sat in his home to steer, and for him there were no terrors of bad weather.

As the weather appeared to be breaking up, we decided to abandon the contemplated trip along the North Coast, and make our way to the south, where we found better roads and travelling easier.

Torpoint supplied our camping site that night, and in the distance we could see

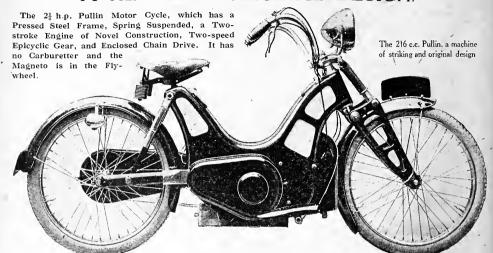

the vessels in Plymouth Harbour. Next morning we crossed the ferry to Devonport, and, choosing the main London roads, made good speed through Dorsetshire and Wiltshire to Oxford. A puncture near Newbury, however, made us very late.

It had been a most enjoyable holiday, and not at all expensive. It was possible to pitch our tent in ten minutes, but taking it up again next morning was a somewhat bigger proposition; in fact, to carry our equipment neatly on the motor cycle was something we never succeeded in doing.

We found friends everywhere, and permission to camp was always given very

readily.

A NEW AND ORIGINAL DESIGN.

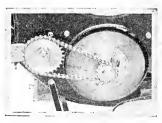

A GA1N we are able to place before our readers the first description of an entirely new lightweight motor cycle of revolutionary design. From its specification, judged in conjunction with its special features and price, the newcomer gives promise of wide success in the lightweight field. Designed by Mr. Cyril G. Pullin, who gained fame by winning the last T.T. race in 1914 when riding a Rudge, the new mount is already in an advanced state of production by an entirely new concern styled the Pullin Groom Motor Co., Ltd., with offices at

Cylinder head, showing formation of fins. Observe compression control valve on the top.

24, Buckingham. Gate, London, S.W., and a new factory at Alperton, Middlesex.

The "Ideal" Specification Attempted.

The object of the designer has been to produce a machine which, whilst possessing a pleasing and compact appearance, is at the same time simple to manage, confortable to handle, and clean to ride on all kinds of roads by riders of either sex. Further to promote the utility of the design, the handiness of the machine has been increased by building the engine in the frame at the lowest point, in order that the centre of gravity of the machine may be kept down to a pitch which renders it stable on greasy roads, and easily handled when being manueuvred about.

Primary drive with cover removed, revealing inspection lid in flywheel magneto.

In the Pullin lightweight the outstanding feature is perhaps the pressed steel frame, a feature long urged in these columns. But there are other points of equal interest and importance in the design, such as the special type of two-stroke engine with automatic carburation and lubrication, the combined magneto

and lighting generator in the flywheel, spring frame, pressed steel forks, interchangeable wheels,

spring frame, presse changeable wheels, handle-bar operated clutch and two-speed gear, and fully enclosed chain transmission to the rear wheel—truly an array of attractive points suggestive of an ideal specification of the future motor bicycle rather than an actual description.

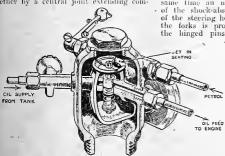

While all these features are in-cluded in the general design, the machine is being produced at the definite price of £44 -cheaper than many scooters! Considering the presentday prices of medium - powered lightweight machines, it will be agreed that the new Pullin production marks a big step in manufacturing progress in 1920. In this connection should be empha-sised that in designing the machine, production costs were at all times borne in mind, which enables the remarkably low figure of £44 to be fixed.

The pressed steel forks' with enclosed shock absorber.

A New and Original Design .-

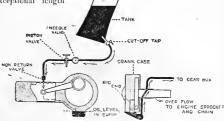

Reverting to its mechanical details, the pressed steel frame is stamped out of sheet steel in two sections (as shown in one of our sketches), and welded together by a central joint extending companion.

The mixing valve shown in section. The small piston valve for controlling the lubrication will be noted.

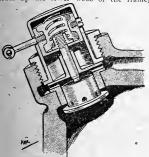

bracket above the steering head. The action of these forks will be readily understood from the illustration, the forks hinging on the transverse pin under the steering head, and causing at the same time an up and down movement of the sheering head. Lateral rigidity of the forks is provided for by designing the hinged pins of exceptional length

Diagrammatic layout of the Pullin lubrication system; the arrow indicates the oil path.

pletely around the construction. The two pressings are ribbed and parallel to give the maximum strength against road stresses, and the complete framework has a dip in the contre to provide an open frame suited to ladies, or those who prefer to ride with a long motor cont to protect the knees. In the lower part are carried the engine and gear hox units, their fixing being arranged to brace up the lower webs of the frame.

The special valve in the cylinder head, which allows the compression to be varied by passing the mixture back into the crank case. The valve is raised or lowered by the small control arm rotating in an oblique slot in the outer easing.

while the two upper "arms" of the frame form the petrol and oil compartments. The enclosure of the engine and gear box unit within the pressed steel frame has not been allowed to militate against the accessibility or easy removal of these units; on the contrary, there is no part of the engine, ignition, or gear box systems which cannot be got at or short space of time.

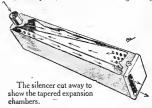

Pressed Steel Forks Adopted.

The front forks are also made of two steel stampings, their movement being controlled by a compound coil spring, enclosed in a telescopic tube hinged to a with wide bearings. As will be seen, this type of fork is devoid of complications, easily assembled or dismantled, and has a minimum number of parts and bearing surfaces.

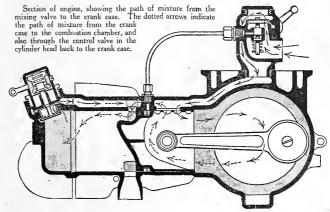

Rear Wheel Springing.

The rear suspension consists of two neatly enclosed coil spring shock absorbers hinged to a point on the main frame just below the saddle. shock absorbers have steel tubes extending down to hinge pins on the horizontal fork stay, and to the chain transmission case on the other side, since the casing is again a pressing, and performs the dual purpose of chain protector and fork stay. Both stays are hinged to a tubular sleeve in the main frame, so that when vertical movement of the rear wheel occurs, these two members (locked, of course, by the rear axle) pivot upon this point against the action of the com-pression springs in the telescopic tubes below the saddle. Both front and rear shock absorbers have rebound springs within the sliding telescopic tubes, hence the fullest possible amount of comfort

An original design of two-stroke engine has been adopted. It has a single air-cooled cylinder, arranged horizontally, the bore and stroke being 2½in: (63.5 nm., 216. c.c.); 3 h.p. is developed at 1,900 r.p.m., the normal rating being

2¼ h.p. The cylinder barrel and crank case are formed in a single iron casting, the cylinder head being detachable by withdrawing four bolts, which arrangement not only allows of simple and easy decarbonisation, but also permits of the withdrawal of the piston and connecting rod through the cylinder without dis-

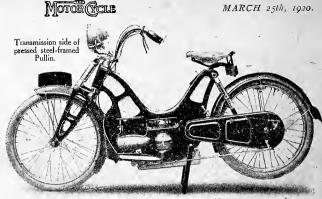

A New and Original Design .-

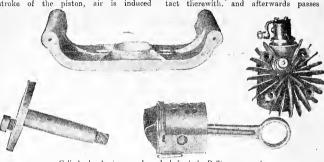

turbing the engine fixings. The cylinder head and also the piston are of cast iron, the piston having two rings fitted in a common slot, and pegged in position to prevent rotation. A simple method of securing the gudgeon pin in the piston by means of a small pin and two brass caps is employed. The connecting rod has a phosphor bronze gudgeon pin bush and a roller bearing for the big end. A single disc web type crankshaft is em-ployed, rotating within a large phosphor bronze bush in the flywheel side of the crank case.

Action of the Engine Explained.

The cylinder of the Pullin engine is of the three-port type, but the transfer port and the general induction and carburation system on this engine are somewhat new in principle, no carburetter of the ordi-nary type being employed. On referring to the sectional drawing of the engine, it will be seen that above the crank case is a "mixing" valve, held upon its seating by a light spring. When a depression occurs in the crank case on the outward stroke of the piston, air is induced

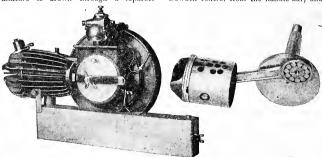

passage in the top of the crank case through a port in the cylinder wall into the crank case. The mixture is then the crank case. The mixture is then compressed, and is able to cool the head of the piston, by reason of its close contact therewith. and afterwards passes

Cylinder head, piston, and crank shaft of the Pullin motor cycle.

through the main intake past the valve and seating in the direction shown by the arrows. At the same time petrol is drawn through a fine hole in the seating and becomes mixed with the flow of air on its way to the engine. Following the indicating arrows in the diagram, the mixture is drawn through a separate through the same port in the cylinder wall and holes in the upper wall of the piston, through the outer channel, and thence through the transfer port into the. cylinder.

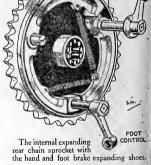

In the cylinder head is a valve, positively lowered from its seating by a Bowden control from the handle-bar, and

(Left) View of the Pullin two-stroke engine, showing the large door in the crank case for facilitating the removal of the crankshaft. (Right) Piston and roller bearing connecting rod of the Pullin lightweight. Observe the holes in the piston wall for the transfer of mixture from the crank case to the cylinder. The silencer is beneath the engine, and forms a complete unit with the latter.

this forms the single control by which the engine power and speed are regulated. If the valve is lifted off its seating, a certain proportion of the charge com-pressed within the combustion chamber is forced through the passage cast in the exterior of the cylinder back into the crank case, hence the amount of mixture exploded in the cylinder is not only varied, but the compression is also varied in unison. It will be seen that unless the engine is running at maximum speed, the valve is constantly passing a certain amount of mixture from the cylinder back to the crank case, but a very important point to remember is that, although the compression in the cylinder is reduced at lower engine speeds, the

HAND

compression in the crank case is main tained at its fullest extent at all times which eliminates one of the commones faults of two-stroke engines in the starve tion of the crank case at small throttopenings and the inefficient transfer of mixture through the ports into the cylin der. No float chamber mechanism is use in conjunction with the mixing valve as petrol can only flow when the valve off its seating and the engine inducing a in the normal manner. Directly the engine stops, the valve drops on its seing, and the issue of petrol through the small port is automatically prevented A finger-operated needle valve with

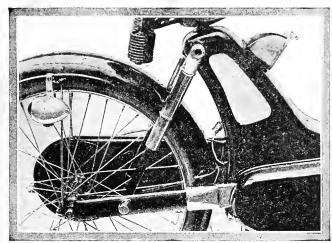

MOTOR (YCLE

A New and Original Design,-

graduated dial on the mixing valve device permits of variation of the petrol supply for climatic or other reasons.

Novelty in the Lubrication System.

The lubrication system, as adopted on this engine, is as original in conception as the carburation arrangements. Machined in one with the stem of the mixing valve is a small piston, which cast inside the mixing valve chamber. Referring to the diagram of the lubrication system, oil flows from the oil tank through a pipe to the small piston valve in the mixing chamber, and thence through another pipe to a non-return valve communicating with a hole in the eylinder wall. The oil flows from the tank to the valve by gravity, but from the valve to the engine the feed is accelerated by the crank case suction, and as the mixing valve proper rises or falls in unison with the speed or suction of the engine, so does the small piston valve also regulate the quantity of oil that is passing to the engine, hence the engine is automatically lubricated ac-cording to the amount of work it is doing. From the port in the cylinder doing. From the port in the cylinder the oil flows on to the cylinder wall, and also drips on to the gudgeon pin

Filler cap, rear lamp, and stays containing springs.

The two pressings which form the main frame shown in the rough state before they are welded together and machined where necessary.

earing through the series of holes in ne piston, and, finally, drains into a nall well formed in the bottom of the

The connecting rod throws up sufficient I from this well to lubricate the big-

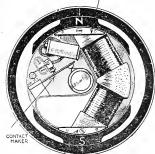

end roller bearing only, the mass of oil in the well being forced up by crank case compression through a channel at the back of the crank case to the main crankshaft bearing. In the crankshaft itself is drilled a diagonal hole, which allows of the oil feed from the well being passed through the crankshaft, at every crank case compression, to a pipe which feeds the gear box and rear chain transmission. will be seen, therefore, that the general lubrication system of the engine is entirely automatic in relation to the speed of the engine and its power output. A graduated needle valve is fitted at the side of

the mixing valve chamber for regulating the flow of oil from the oil tank to the automatic piston valve control.

Still more originality is displayed in this remarkably novel type of motor cycl . For ignition purposes a special form of magneto is employed, consisting of two circular permanent steel magnets and cast iron pole pieces (which, as a mass, form the "flywheel" of the engine), and a stationary armature with high and low-

ARMATURE POLE PIECE

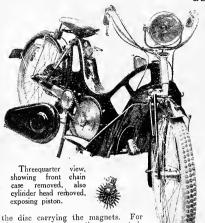

ARMATURE POLE PIECE PIECE

Diagram of the field magnets, pole pieces, and armature of the ignition and lighting generator.

tension coils mounted on an aluminium back plate behind the crank case. The layout of the magnets and the armature is shown in diagrammatic form, and it will be observed that there are two coil units situated in V formation between the laminated pole pieces. Each coil has high and low-tension windings, and a contact maker of the ordinary blade type is mounted on the armature back plate and operates on the cam on the "fly-wheel" boss, access to the platinum points being gained through a trap door

in the disc carrying the magnets. For lighting purposes alternating current is obtained by tapping the low-tension circuit, and with head and rear lights illuminated, there is ample current still available for ignition. The ignition firing point is fixed on each machine before delivery, but a split boss carrying the armature assembly on the crank case allows for variation in timing, if necessary.

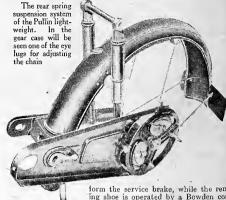

The engine is held by three bolts within the main frame, and is more easily removable than might be imagined; furthermore, all the working parts of the engine can be taken out clear of the machine for cleaning and adjustment purposes without disturbing the cylinder and crank case casting. A large circular door with a clamp bar and wing nut is fitted on the outside of the crank case for this purpose.

Cooling is effected by a head-on draught of air passing the cylinder fins through an opening in the lower part of the main frame, and although the engine appears to be boxed in to a great extent, we are assured that the cooling arrangements have been proved to be satisfactory.

Below the engine is a silencer, having internal chambers arranged in such a manner as to eliminate noise to a large degree.

Epicyclic Two-speed Gear.

From a sprocket on the outside of the flywheel the primary drive is taken through an encased ½in. ×4in. roller chain to a two-speed epicyclic countershaft gear mounted in the rear portion of the main frame. The high and low speeds, giving respectively ratios of 6 to 1 and 12 to 1, are obtained by a bevel type of balance gear, having a sliding cone unit which, when moved to certain positions by the Bowden control from the handle-bar, gives the high or low speeds, or the neutral position equivalent to declutching. The two main shafts of the epicyclic gear are mounted on ball bearings, and all the revolving parts, including the clutch cone surfaces, are, as aforemen-tioned, lubricated by the oil feed from the engine. As in the case of the engine, the whole of the parts of the gear box can be dismantled in a few minutes without disturbing the main casing, after first of all disconnecting the transmission chains

From the gear box the drive is taken through another roller chain in. X in., adjustable for tension, to the rear sprocket,

and it will be noticed from the illustrations that the gear case (the inside of which, as already mentioned, replaces the horizontal rear stay) is on the outside of the rear down tube, thus making it a simple matter to remove the cover and

so get at the chain.
Within the rear chain case the back sprocket runs on an independent roller sprocket runs on an independent roller bearing, the drive being communicated through dog jaws. By knocking out a central spindle, the rear wheel can be removed without disturbing the main sprocket, chain adjustment, or the chain case, whilst the front and rear wheels are interchangeable. Within the main sprocket are three expanding shoes and two operating spindles. Two shoes are two operating spindles. Two shoes are expanded by the foot brake control, and

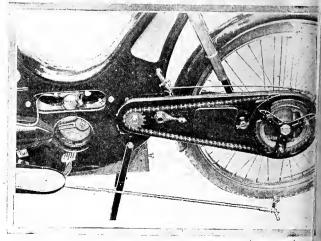

form the service brake, while the remaining shoe is operated by a Bowden control from the handle-bar. Thumbscrews are

from the handle-bar. Thumbscrews are provided on both brake controls outside the gear case for easy adjustment. 24in. × 2in. Hutchinson tyres, twis grip engine control, pressed steel carrier and metal tool box (the latter not show) in the illustrations), are included in the specification, and only two standard size of nuts, with the exception of the larg tubular bolts, are used throughout the machine. The petrol consumption i stated to be 110 miles per gallon, and the weight about 130 lb. Head and ta lamps are not included in the specifie price of £44, but these, together with "stand-by" battery, will be supplied a a slight extra cost.

Altogether the machine provides striking example of the progress machine the design of motor cycles and methods employed to cheapen the control of the contr

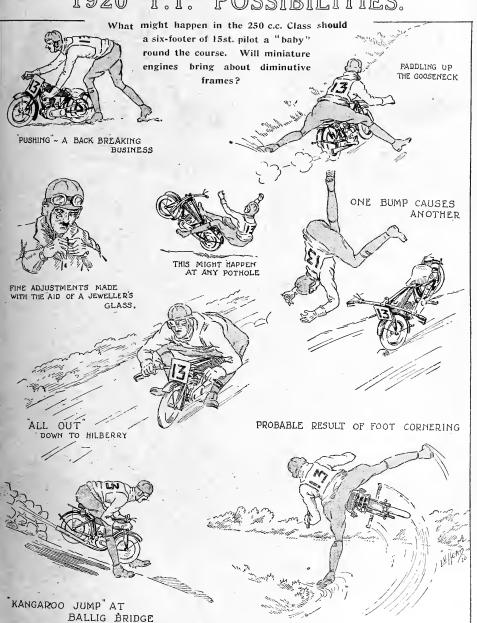

of production.

We hope shortly to give this machine to the shortly to give this machine to the shortly to give this machine to the shortly to give this machine. a trial on the road, and to record on impressions of its general behaviour.

Crank case cover and chain case removed revealing big end and brake system.

1920 T.T. POSSIBILITIES.

non

some of the smaller firms who have There are many new comers since the publication of the last Motor Cycle Buyers' Guide. Most of these replace dropped out of the industry, but others are the produce of larger firms, such as the A.B.C., Acme, Beardmore Precision, Cedos, and Martinsyde. Since the Buyers' Guide was last pub-

lished, in 1915, there has been an increase in the number of makers, largely due to the increased number of smaller greatest increase is in the but in comparing the given below, it must not be overlooked that most of the larger makers also market models other than those illustrated. The Triumph, James, Excelsior, Hebart, Diamond, among others, catemachines fitted with twoalso market twe-stroke machines, in firms, who are in the assemblers' gory. The greatest increase is in stroke engines, number of hgures

that certain factories have sold their entire output for this year. This does

No doubt many readers have heard

Delivery.

not necessarily mean that such outputs

are sold to the public.

sell to their agents, who may not, in turn, have disposed of their prospective looked by the potential purchaser is that

Manufacturers

singles on the market is also similarly affected. In fact, this applies to all types. For example, the B.S.A. and Bradbury also market a single, and the Ariel and Royal Ruby a twin. But, while the number of actual four-stroke taken all round, it is safe to conclude that there is an increase in lightweights of all types. Flat twins have increased, illustrated, as have the four-cylinder machines.

New Types.

Probably, the outstanding departures from general practice in 1915 are the new Pullin, Beardmore Precision, and increased. Tyre sizes have been enlarged all round, and chain drive for twin A.B.C., while the number of spring frame machines now available is greatly

sidecar machines is general practice.
A study of the Buyers' Guide reveals a disappointment to those who during the war urged that British makers conceninstead of offering a large number of models all differing sufficiently to restrict trated on one, or, at most, two models production. Incidentally, in this connection, the newcomers to the industry apto appreciate the advantages 'mass" production of one model only, near

Describing a Spring-time Joy Ride, Aimless in Objective despite a Definite Purpose.

HEN the weary and jaded motor cycle scribbler hears that the Editor has another commission for him he braces himself up for the worst, guessing that he is expected to prepare himself at once for a journey to the uttermost ends of the country, despite hour of day, weather, and inclination, in order to report a trial or review a new design.

It was with misgivings of this nature that I received the announcement of a special stunt for

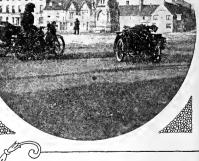

the Spring Number.

"Tell me the worst," I moaned to J—, who burst upon me with the news. (J— occupies that position in editorial offices known as "whipper-in." He it is who worries artists,

scribes, and photographers for drawings, copy, and pictures—the initiation and propagation of "winds" is his destiny.)

"You and I," he responded, "are commissioned to go out on the Ides of March and to return with story and pictures descriptive of the joys of Spring."

(Left) A pretty scene en route. (Right) A halt in Stratford-on-Avon. An early morning scene.

"Easy; we have merely to hie us to Stoneleigh and watch the buds budding, the flowers flowering, and the birds birding, and collaborate on the words and music, what?"

"Don't rot," responded J—, "the buds don't bud in this month; besides, it's Spring,

A Spring Run .--

true British Spring, we're to describe, so get your gumboots and oilies out, and meet me at seven in the

"Make it eight, and I'll be there; or say a quarter

past-or, if that's too early, say-"

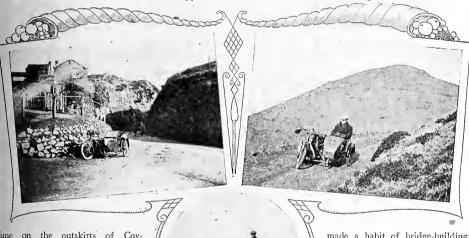

"Eight o'clock, and one mark deducted for every minute after schedule," replied the whipper-in.

Whither Away?

The morning came, grey and chilly, but fine, and we met not more than ten minutes behind the appointed

My haversack, which is noted for its well-stocked interior, yielded the necessary spare, and away we

The sun was beginning to gain some heat as Stratford was reached, and while J- was exposing films and reviewing local associations, onwards from the time of Shakespeare and the youth who went penniless to London and returned a wealthy merchant, I ran over a few nuts and looked to the adjustments. The said merchant, my companion informed me, perpetuated his memory by building a bridge, whereat I remarked that it seemed strange that most famous men

time on the outskirts of Cov-

"What's the programme?" I asked of J-, to whom all the arrangements had been relegated.

"To the Worcestershire Beacon, fifty miles," was the reply, "and the best route is via Warwick, Stratford, Alcester, and Worcester. Are you right? Then start up.'

"Right-oh. Shall I lead—otherwise, you will leave me; your 'bus is faster than mine?"

Only a minimum of traffic was encountered on the byelanes, and Warwick was soon reached; but ooking back, J— and his Norton 'Big Four' sidecar was not to e seen. After a ten-minute wait, is arrival was heralded by a olossal banging.

Trouble was pictured in the rider's grieved exression, but no apparent reason for the "noisy" misring being noticed, it was decided to run along the oad and stop beyond the town for diagnosis. The Vorton's emission of a series of ear-splitting reports ade it possible to suspect ignition trouble even beore we stopped. On examination this was proved be correct—the insulator of the plug having split in alf. The remaining portion, however, was the outside art, so that ostensibly the plug looked whole.

(Left) The cutting at the Wyche. The road to the Beacon is on the left.

(Right) On the track that leads to the Worcestershire Beacon, the hill shown in the background.

(Bottom) This picture conveys a good idea of the nature of the road near the summit. There is an almost precipitous drop of several hundred feet on the left.

made a habit of bridge-building. "He builded a bridge" occurs in "All great men many histories. are remembered by bridges," I "Take Euclid, for insaid. stance; he erected that stupendous pons asinorum by which he will ever be known; take also-", but my discourse was terminated by J— viciously standing on his kick starter.

Most glorious sunshine now made our extra winter clothing almost a burden, and it was possible to make quite good time through Alcester and Worcester, despite the tramways congestion and vile road surfaces at and near the latter place.

We found Malvern in gay attire, thanks to the warmth and sunshine,

and climbing the Wyche by the easy road decided that the Scott should essay the climb of the Beacon, as the Norton sidecar tyre exhibited an ominous swelling. Consequently, J- placed himself at my mercy, and we chewed our way up the winding grass track which appears to hang precariously on the edge of space.

Glorious views extending as far as the Welsh mountains on the one hand, and Oxfordshire and Warwickshire on the other, were obtained when the summit was reached.

A Spring Run .-

Descending cautiously with low gear and brake in operation, we had lunch in Malvern, sparing many a thought for our colleagues cooped up indoors. Of course, we could not pass Malvern Link without looking into the new works where the Morgan Runabouts are made, and then, setting out again, full throttle was the rule, and we retraced our path.

Effect of Capacity.

As both machines were pulling empty sidecars, it was interesting to compare performances. While the Scott could just hold the big 600 c.c. single on the level, the Norton certainly had it all its own way on hills, up which it thundered with undiminished speed.

It is just the extra c.c.'s that count under these circumstances, but given ordinary touring conditions, the smooth and soothing purr of the twin two-stroke compensates for its slightly lower maximum speed. In many ways the comparison between the two machines was interesting; for example, the disparity in fuel consumption which might have been expected showed only slightly in favour of the four-stroke.

We arrived at the end of our journey thoroughly exhilarated with the speed of our run through the keen, fresh countryside, and, although we started out in search of adventures, we experienced nothing more than the ordinary roadside incidents which constitute one of the charms of every motor cycle run.

WHARFEDALE.

THE MOTOR CYCLE IN THE FRENCH ALPS.

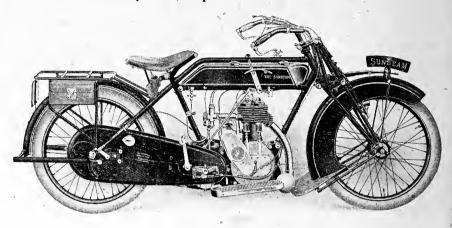

After the Paris-Nice Trial and Argenteuil Nice-La Turbie Hill-climb, several of the competitors took the opportunity of visiting the magnificent scenery of the Alps. The photograph conveys a good idea of the country visited, and cannot help but create the longing to visit this fine touring ground.

Read this specification The Single Cylinder Sunbeam Motor Bicycle with perfect power transmission

ENGINE.— $3\frac{1}{2}$ h.p. single-cylinder Sunbeam, 85×88 , 499 c.c.

KICK STARTER.

1GNITION.—Ball bearing waterproof magneto.

SILENCER .- Large, with long pipe to rear.

CARBURETTER .- A.M.A.C. or B. and B.

FRONT FORK.—Sunbeam patent with Leaf Spring.

WHEELS.—Qnick detachable and interchangeable. The spoke holes are depressed to allow the nipple heads to sink into the rim, so that they are not liable to puncture the air tube.

The hubs are fitted with large ball bearings, and the wheels are built with heavy gauge spokes.

TYRES.-Dunlop or Bates. 650×65.

MUDGUARDS.-Extra wide front and back.

CARRIER.-Light and strong.

STANDS.—Front and rear.

FOOTBOARDS.—Rubber covered, aluminium rims,

BRAKES.—Internal expanding brake on rear wheel operating inside back hub sprocket, and enclosed in the chain case. The brake shoes are lined with Ferodo, and the brake is smooth and powerful in action. The front brake is operated by a Bowden cable from the handle-bar, and like the back brake, is of our own manufacture.

TANK.—Large, nearly two gallons of petrol and $1\frac{1}{2}$ quarts of oil. Drip feed lubricator.

TRANSMISSION.—Sunbeam Perfect Power Transmission. Chains enclosed in Sunbeam Oil Bath Chain Cases.

GEAR BOX.—Sunbeam Three-speed, countershaft, Ball bearing Gear Box, gears always in mcsh, no sliding pinions. Gate change.

GEARS.—Solo use only, 4.9, 7.8, 13.4; Sidecar and solo (double purpose use), 5.25, 8.3, 14.25; Sidecar used always, 5.6, 8.8, 15.2.

CLUTCH.—Special Sunbeam. Hand operated. ALL-BLACK WEATHERPROOF FINISH.

Price 136 Guineas net cash.

THE TRANSMISSION GEAR AND STARTING MECHANISM ARE ENTIRELY ENCLOSED

The Makers reserve the right to make such improvements or alterations in the specification as they may from time to time deem necessary and advisable without notice.

203 Designs.

A feature of this annual spring number The Motor Cycle is an illustrated Buyers' Guide of all models on the British market.

Fuel Experiments.

In order to find a remedy for the present fuel difficulties, experiments have recently been made in running the London omnibuses on a mixture of benzole and alcohol. The proportions used were half and balf, and after raising the compression it was found that eleven gallons of the mixture gave the same results as ten gallons of petrol. Further research in this direction will undoubtedly prove of considerable value and interest to all owners of machines fitted with internal combustion engines.

Westmorland M.C.C. Open Hill-climb.

Entries for this event, which will be held at Orton Scar, near Kendal, on Easter Monday, close first post on Saturday next. Completed forms, to-Saturday next. Completed forms, together with fees at the rate of 15s. for trade entrants, 10s. for non-members, and 5s. for members, should be sent to Mr. A. I. Moffat, Glen Villa, Oxenholme, Kendal. In 'addition to the usual classes for motor cycles, ranging from 275 to 750 c.c., there are classes for scooters, cycle cars, and sidecar outfor scooters, cycle cars, and sidecar outfits. The last two classes will be run on formula.

Imports and Exports.

There was a decided decline in the value and number of motor cycles imported during February, as against the previous month. The Board of Trade returns show that there were 481 fewer motor cycles brought in, and the value £15,383 less.

February. Motor cycles. 1913. *Value ... £5,474 £104 £

*Exclusive of parts and accessories. £18.743

Exports for February also show a decline, the extent of which is greater than one would have imagined. The figures show that the Overseas market was poorer by 234 machines than was the case in January.

1913. 1920. Motor cycles and parts. Number . 1,249 628 889 Motor cycles, including parts. Value. £68,555 £58,317 £106,730

Summer Time,

Summer Time commences this year on the last Sunday in March, and continues for six months.

Between Knightsbridge Barracks and Hyde Park Corner there is a trap in operation over a measured distance of 125 yards.

We understand that a trap is being worked in the Bexley Heath district, the

exact location being on the Broadway, from Welling to the top of Crayford Hill. We learn from the Royal Automobile Club that the police are particularly active, as far as motorists are concerned, in Winchester. The warning applies specially to week-ends.

Special Features. ANNUAL SPRING NUMBER.

BUYER'S GUIDE OF 1920 MODELS. TOURS IN BRIEF.

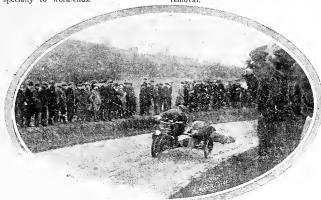

A REMARKABLE NEW MACHINE. ON TOUR WITH TENT AND SIDECAR.

A Dangerous Scottish Hill.

Touring cars and family sidecars are strongly urged not to attempt the descent of Douglas Glen, which is among the most perilous hills ever included in a trial. One of the official cars in the recent Glasgow Club's trial eafely climbed the hill, but the driver vowed that nothing would induce him to attempt it again.

Abolition of Speed Limits.

During the war, speed limits were im-During the war, speed limits were imposed in the neighbourhood of certain camps, notably at Shoreham, Sussex; Whitchurch, Salop; Ripon, Yorks; and possibly at other places. In response to enquiries by the Royal Automobile Club, the Director-General of Roads states that in those cases where the regulations have ceased to operate the local authorities are being asked whether the speed limit notices have been removed, and in cases where this has not been done instructions are being issued for their immediate

A SIDECAR HILL-CLIMB IN FRANCE

The extraordinary attitude of the sidecar passenger was effected to aid the winning Rover outfit on one of the hairpin bends of the test hill at Argenteuil. The length of the climb was two kilometres, and was covered in 2 min. 34 sec. by L. Psalty.

A Reunion Dinner.

The A.C.U. Motor Messenger Detachment, which did such good service during the war, held a reunion dinner on Thursday of last week. Mr. T. W. Loughborough was in the chair.

R.N.D. Signals D.R.'s.

It is suggested to hold a reunion dinner of D.R.'s who served with the Royal Naval Division, and Mr. H. E. Ellis, St. Abbs, Buttershaw, Bradford, will be glad if those who are interested will communicate with him.

Reunion of the 37th Divisional Signal Company.

It is proposed to hold a reunion at Stafford for all ex-members of the above Signal Company who served under Major Sir Alexander Bannerman, Bt. Those who are interested are invited to communicate with Mr. B. G. Anderson, Swiss Cottage, Queensville, Stafford.

The Arbuthnot Trophy Trial.

Again the naval event for the Arbuthnot trophy, organised by the A.C.U., will occupy two days. The course will be in the Home Counties, and will include a speed trial on Brooklands track. event is open to any officer or midship-man of His Majesty's Navy, Naval Reserve, or Naval Volunteer Reserve on the active list on the date on which entries close (Monday, June 21st). Sidecars and runabouts are excluded. Courses of between 100 and 150 miles in length will be arranged.

The Six Days and Brooklands.

The A.C.U. Six Days this year will include a speed test on Brooklands, and probably a set of speed tests will be run for each class. This will serve in lieu of the final examination of the machines, and should eliminate some of the survivors. The incorporation of a test of this description has been advocated many times in the past by The Motor Cycle. Brooklands will be the scene of many interesting events this year, for, in addition to the B.M.C.B.C. monthly meetings, the M.C.C. will also hold a race event on the track, and the Arbuthnot Trophy-Trial, on July 8th, Arbutanot Prophy-Trial, on July 8th, will include a Brooklands test. Racing will begin on Easter Monday with a B.M.C.R.C. meeting, while the Autonobile Bacing Club will hold a meeting on Whit Monday (May 24th), which will be followed by others.

"HIS week a number of displayed and other advertisements have been unavoidably crowded out due to production difficulties, accentuated by the temporary paper shortage. "The Motor Cycle" circulation still constitutes a world's record, amounting to considerably over 120,000 copies each week.

Proposed Aggregate Prize to Determine a Champion.

Proposals for the institution of a championship in the world of motor cycling sport have recently been made, and the idea would seem to have appealed to a very large number of riders throughout the country. The Auto-Cycle Union has been asked to formuthe General and Competitions Committees of the Union the basis of the idea was approved, and the suggestion was thoroughly gone into. It has been decided that the best system of making such an award as is proposed would

be by allotting marks, to all competitors taking part in any or all of the eighteen open competitions yet to take place, and in the events to be organised by the Union itself, such as the A.C.U. Six Days Trial. The competitor earning the highest number of marks throughout the season would then be declared the motor cycling champion of the year. In short, the old system of an "aggregate" prize is resorted to.

The London-Land's End Trial.

Nearly 200 entries have been received for the popular M.C.C. Easter run to Land's End. These include 91 solo machines, 66 sidecars and runabouts, and machines, to succars and runabouts, and 32 four-wheelers. Many new models will make their début, including the Metro-Tyler, O.K.-Union, 7-9 h.p. Rudge, New Scale, Castle-Three, and T.B. cycle car, while among the four-wheelers there will be the new 8 h.p. Rover, the Blériot Whippet, Aerocar, and the A.B.C. A new course will be covered this year, taking in Porlock and Linton Hills. The premier award is the Jarrott Cup. Next week we shall give a full list of entrants and further details of the competition.

The Pullin lightweight on the road. Although over seventy years old, the rider manages the machine with the greatest ease.

The A.A. One Hundred Thousandth Member.

Interesting Speeches at Celebration Dinner.

O celebrate the attainment membership of one hundred thousand (actually 106,401), a dinner was held by the A.A. and M.U. at Oddenino's Restaurant on Tuesday last week. The chair was occupied by Lt.-Col. Charles Jarrott, O.B.E.

In proposing the toast "The First Hundred Thousand," the Chairman went into the early history of the A,A. told of how the Association had been the first to institute cyclist patrols, village signs, free legal defence, sentry boxes, roadside telephones, the first mechanical first-aid motor cycle, and the first roadside

fuel supply system. He coupled with the toast the names of Lt. Col. Walter Gibbons and the Rev. A. Hassard Short. Mr. Hassard Short has always repre-

sented motor cyclists on the committee of the A.A. and M.U., and made a real motor cyclist's speech. He was, he said, a very early motor cyclist, and was one still, and a solo motor cyclist at that.

The motor cycle was now used throughout society, had become a real utility vehicle, one which would teach the value of the motor to all and sundry, and answering for the motor cycle members of the Association he hoped that very

soon the motor cycle membership alone would number a full one hundred thou sand.

The Chairman then rose to propose the Press, the S.M.M.T. and other hodies to which Mr. Fred Lanchester replied i

an amusing speech.
Mr. Massac Buist and Mr. Walte
Groves replied for the Press.

The Secretary and Staff was propose by Mr. McWhirter, to which Mr. Stenso Cooke replied, paying a handsome tribut to practically every prominent member of his numerous staff who had rendered in valuable help.

The A.C.U. Annual General Meeting.

Important Business Quickly Settled.

WHETHER it was the ideal spring weather which rendered the enjoyment of the balmy air and brilliant sunshine preferable to the atmosphere of a stuffy room, or the businesslike way in which the chairman, the Hon. Sir Arthur Stanley, G.B.E., C.B., M.V.O., conducted Stanley, G.B.E., C.B., M.V.O., conducted the proceedings, the fact remains that the annual general meeting of the A.C.U. at the First Avenue Hotel, Holhorn, was held in record time. In opening the meeting, the Chairman referred to the loss the Auto Cycle Union had sustained loss the Auto Cycle Union had sustained in the death of the former chairman, Mr. J. R. Nishet. All were aware of the splendid work he had done, not only for the A.C.U., but for the R.A.C., the Royal Scottish A.C., and for every branch of motoring, work which had been invaluable to the movement.

It was then proposed by Mr. A. W. Torkington, present chairman of the A.C.U., and seconded by the Rev. E. P. Greenhill, that the Hon. Sir Arthur Stanley should be re-elected president, a proposal which was carried manimously.

a proposal which was carried manimously. Sir Arthur Stanley, in tendering thanks for his re-election, stated that his most useful work was that of acting as a link between the Auto Cycle Union and the Royal Automobile Club; the close cooperation of the two bodies was most desirable. (Hear, hear.)

Election of Officers.

The Chairman then invited twelve nominations for election as vice-presidents. Mr. E. S. Shrapnell-Smith, C.B.E., nominated the following gentlemen: Brig. Gen. Sir Capel Holden, F.R.S., Lt.-Col. A. E. Davidson, D.S.O., Lt.-Col. D. F. Nicholls, D.S.O., Col. F. Lindsay Lloyd, C.M.G., 'Col. M. O'Gorman, Sir Julian Orde, the Rev. E. P. Greenhill,

and Messrs. A. W. Torkington and G. F. Sharp. Three of the vice-presidents whose names were on the annual report whose names were on the annual report were omitted, and it was proposed to elect these gentlemen hon life members of the Union. The Chairman then put it to the meeting whether the names should be voted upon separately or en bloc, and it was agreed to adopt the latter course. The proposal was seconded by Col. F. S. Brereton and carried unanimously.

The Balance Sheet.

The annual report of the Union, as it had been printed and circulated, was taken as read, and proposed by Mr. A. W. Torkington. The secretary was then asked to refer briefly to the principal items in the report, a summary of which appeared in The Motor Cycle for March 18th. It was interesting to learn, in view of the trade attitude toward the race, that Mr. Loughborough said that he considered the T.T. this year would be a most successful event.

In proposing the adoption of the balance sheet, the hon. treasurer, Mr. E. S. Shrapnell-Smith, made some interesting remarks. The credit balance was not a large one, he pointed out, because the Union spent all its money on its members, but the financial position of the Union was much better this year. In pre-war days the income was £5,000 per annum, in the last year of the war £1,600, and now up to £17,000. He hoped that there would be a large balance at the end of the year, and that a reserve fund would be built up. The report was seconded by Mr. E. M.

P. Boileau.

Messrs. B. Marians, G. Smith, and G.
Reynolds asked questions on the balance sheet, which were duly answered by the hon, treasurer, and the balance sheet was then adopted.

The meeting was next declared by the Chairman to be at an end.

The Meeting of A.C.U. Individual Members

The meeting of the individual members immediately followed. The election of immediately followed. The election of the following to represent the individual members on the General Committee was then proposed by Mr. If. P. E. Harding, and seconded by Mr. George Reynolds: Messrs. S. L. Bailey, W. Cooper, A. Ross, G. Smith, E. B. Ware, and W. H. Wells. The proposal was duly carried. In the ensuing informal discussion Mr. B. Marians suggested that the Auto Cycle Union should organise a trial for stock

Union should organise a trial for stock machines.

Mr. Greenhill, chairman of the Competitions Committee, suggested that this might be done if the A.C.U. appointed officials to visit the various manufacturers and agencies in order to select and seal

certain machines.

Mr. Loughborough then made a few remarks regarding the election of affiliated club members to sit on the General Committee. There were eighty-nine nominations for six vacancies. Some of these included persons who were on the committee as individual members, and some clubs had nominated existing committee-

The Chairman suggested that these facts should be circulated to the clubs. In terminating the meeting, Sir Arthur Stanley congratulated the A.C.U. on its progress.

A vote of thanks to the Chairman was proposed by Mr. Torkington, and received with acclamation.

The members present were then enter-tained to tea by the Auto Cycle Union,

THE RICHMOND MEET AT EASTER.

THE arrangements for Good Fri-day's annual gathering of Northern clubs in the Market Place, Richmond, are now complete, and an extensive prize list is announced. The meet will take place at 12.45, and all drivers of motor cycles and cycle cars (up to of motor cycles and cycle cars (up to 1,500 c.c.), who are members of competing clubs, will be counted. The number of miles from club headquarters to Richmond, by nearest route, will be multiplied by the percentage number of paid up members present, and a trophy is being presented by the A.C.U. In the event of two clubs tiemg or running very close, a second prize will be

awarded. Prizes will be awarded to the most novel or ingenious idea fitted to a motor cycle, and to the lady who has driven farthest to the Meet. Two prizes will be awarded by The Motor Cycle, one to the owner of the smartest machine and one to the lady with the best kept machine.

Lunch will be taken at 1.15 p.m., and at 2.15 a group photograph will be arranged in the Castle Yard. At 2.30 the Mayor of Richmond, supported by Aldermen and Councillors, will officially welcome the motor cyclists to the town, and Messrs. A. W. Torkington (chairman A.C.U.), T. W. Loughborough (secretary A.C.U.), and others, will address the

A.C. U.), and others, will address the meeting.
Lient.-Commr. Pierce, R.N.R. (A.C. U.), will act as marshal, and he will be assisted by R.A.C. guides.
The committee of judges will consist of Messrs. Liddle (president), Torkington, Loughborough, Longfield, Fortune, Sellors, Tranmer, Straker, Lancaster, and a representative of The Motor Cycle. The assistant hon. secretary of the meeting is Mr. A. K. Procter, 28, Gillygate, York.

It is hoped that, in addition to the clubs participating, the ex-D.R.'s in the North will also meet at the same time.

THE STAXTON HILL-CLIMB.

THE popular Staxton hill-climb will be held on Easter Monday, April 5th, beginning shortly after noon. It will be organised by the Scarborough and M.C.C. The hon. secretary is Mr. J. D. Fell, 57, Gladstone Street, Scarborough. Entries close March 30th. There will be classes for scooters, 275 c.c. and 350 c.c. lightweights, T.T.

motor cycles up to 500 c.c., and up to 1,100 c.c. standard touring machines, 650 c.c. and up to 1,100 c.c. sidecar outfits up to 600 c.c. and up to 1,100 c.c., cycle cars and runabouts, including three-wheelers up to 1,100 c.c., and two classes for light cars, making twelve classes in all, which include all machines of standard capacities.

The prizes are the Tranmer Cup, to be won outright by the competitor in any class who makes the fastest time of the day; gold, silver and bronze medals will be given in each event if seven or more entries are received, silver and bronze medals if four or more entries are re-ceived, and a bronze medal if less than

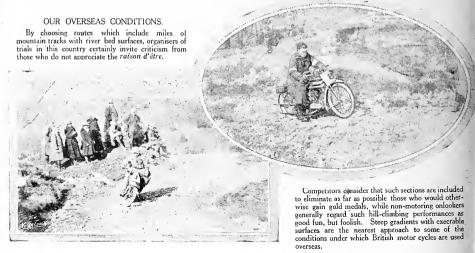

A Commentary based upon Practical Experience and a Study of Overseas Opinions.

The Trade. Existing conditions render production more and more difficult; the moulders' strike has been the cause of many shops being entirely closed down, while of the rest almost all have been forced to work short time. Deliveries will be delayed, and existing promises cannot be kept—a circumstance which will undoubtedly be the cause of much lost trade. In spite of this, some of the new British models are worth waiting for, and will compare favourably with anything that has yet been produced for rough and heavy work.

British manufacturers have been slow to appreciate the requirements of Overseas riders, but have been characteristically thorough once these needs were absorbed. There are probably more makes of good spring frames at the present moment than makes of motor cycles, sprung or otherwise, in the U.S.A., and these spring frames are often combined with good ground clearance, 28in. x sin. tyres, heavy spokes, enclosed fransmission and a quality for which British machines are famous. It remains to organise "service," and it is doubtful if this will be radically improved before manufacturers are once more in a position to export in quantity, though efforts in this direction are already on foot.

Design. WHETHER a design is good, medium, or even bad is so largely a matter of opinion that it is not wise to attempt to put one's ideas on this subject on paper. There are, however, certain outstanding features on which all motor cyclists agree. A general clean up is urgently required. There are too many corners and "twiddly bits" on modern machines, many of which could be eliminated by a little serious drawing office work.

At the same time it should be remembered that simplicity in outline does not always constitute the ideal of the hard riding motor cyclist. For instance, enclosed controls are extremely neat and excellent when all is well, but, when trouble occurs far from home, repairs are difficult and often impossible. This is but an example of a principle which holds good in many other ways, and is capable of much argument from both sides. Undoubtedly, controls should be neatly arranged, and, if possible hidden from sight, but they should be easily accessible in case of trouble. [The space usually devoted to Overseas letters has in this issue been absorbed by the inclusion of a comprehensive Buyers' Guide—a special feature which may be useful to both home and Overseas readers to keep for reference.—E.D.]

A NEW FLYWHEEL MAGNETO.

The Mark IV. Villiers Engine is to be Equipped with a Self-contained Magneto.

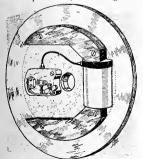

IT has been apparent for many years, as has been frequently pointed out in The Motor Upcle, that a considerable saving in parts and elimination of transmission details could be effected, especially in the case of two-stroke engines, by the adoption of a special type of generator for ignition purposes in place of the conventional magneto.

As long ago as 1904, a motor cycle engine was placed on the market, in which an ignition apparatus was contained in the flywheel, and there were certainly no theoretical disadvantages in such a form of construction. In practice, nevertheless, the idea did not gain many adherents. Latterly, however, several devices on the same lines have been manufactured in the United States. British motor cycle engineers have, until quite recently, exclusively devoted themselves to the ordinary type of chain or gear driven high-tension ignition machine, but we are now able to give our readers fall details of a flywheel magneto which is to be fitted to one of the most popular two-stroke engine units at present on the market.

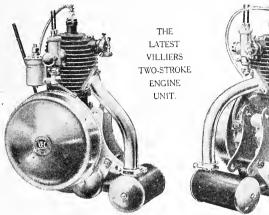

High-tension Magneto in the Flywheel.

The device under review is the product of the Villiers Engineering Co., Ltd., of Wolverhampton, and it is some considerable time since it passed out of the experimental stage. Tests have been carried out for a number of years, using the new pattern magneto, under most stremous conditions, on both single and variably geared two-stroke machines equipped with the well-known Villiers engine, and the makers appear to have anticipated and solved every possible difficulty.

Essentially, the apparatus consists of two main portions, the inner one being an aluminium plate, which is frictionally beld on an extension of the main shaft bush, while the outer one is a bronz: flywheel, mounted on the engineshaft itself. The flywheel carries the two semi-circular permanent magnets, and is these are held in place by the laminated pole shoes, no drilling of the

All the electrical parts are secured on an aluminium back plate. It will be noticed that the magnetic circuit consists of laminations throughout.

The Villiers Mark IV. two-stroke engine with flywheel magneto. The latter is completely enclosed and no rotating parts are visible. The timing lever will be noticed projecting from the back of the magneto.

magnets themselves is necessary. The flywheel is mounted on an adapter, which has a taper bore corresponding to the taper of the engine-shaft, and this adapter has a milled cam on its periphery. In outside dimensions the flywheel corresponds to the usual type of flywheel fitted to these engines.

The inner aluminium plate serves as a mounting for the armature and its coil, the condenser, and contact breaker. The armature core is completely laminated, and the pole shoes also consist of a large number of laminations. It will thus be seen that the construction follows an ideal which is not always attained in conventional magneto design, for in the ordinary horseshoe type it is not always convenient completely to laminate the magnetic circuit.

The Product of One Works.

Having experienced considerable difficulty in obtaining parts which would withstand the severe electrical tests to which they were submitted, the Villiers Engineering Co. decided to carry out the entire construction of the flywheel magneto in their own works, and consequently they now wind their own coils and assemble their own condensers. The coil is beautifully made, being wound on a core of specially moulded insulating material, and so arranged that the outside connections can be detachably screwed in place, instead of being soldered as in conventional magneto practice. The same principle is also employed in the case of the condenser connections, and the condenser itself is readily detachable; it will be seen, therefore, that in the remote possibility of the coil or condenser failing, either one or both may be removed and replaced by the rider himself

The coil, condenser, and contact breaker being secured to the stationary back plate, favourable conditions are secured for the electrical parts, as they are not subjected to any centrifugal action; the magnets themselves and the contact breaker can are the only parts rotating with the flywheel. The contact breaker is of very simple construction, and only light springs are required in order to effect the closing of the platinum points. The accompanying illustration shows quite clearly the manner in which the contact breaker is operated. The cam on the flywheel boss lifts one end of the fibre rocker, which is loosely pivoted on the condenser box, and the other end of the rocker presses on the spring carrying one of the platinum points, thus causing the latter to move the required distance away from the other one.

Easy Starting Demonstrated.

After examining various parts in process of manufacture, and observing the particular care which is bestowed upon the securing of complete interchangeability, and also the severe electrical tests to which the insulating materials were subjected, we saw several completed engines being tested in their ordinary course as they left the assembling shop. It was noticeable that these engines invariably started at about the third revolutions.

The bronze flywheel, which incorporates the cam and contains the magnets, which are clamped in position by the laminated pole shoes.

A New Flywheel Magneto .-

tion, and, owing to the fact that the detegn permits an equally effective spark, whether the ignition is advanced or retarded, movement of the control lever had no effect on the ease of starting.

A remarkable feature of the flywheel magneto is the excellent spark given at very low speeds. Turning the shaft by band at about 60 r.p.m., a regular spark across an in gap was obtained; this, of course, is due to the comparatively high peripheral speed of the flywheel, even at low shaft speed.

Other Advantages.

Both mechanically and electrically, the Villiers flywheel magneto possesses great advantages over the separate horseshoe type of magneto. Being fitted on the timing side of the engine, the driving aide is left clear for the attachment of

Loughborough and District M.C.C. A run to Leamington Spa will be held on Sunday, starting at 10.30 a.m.

Isle of Wight M.M.C.

On Easter Monday, April 5th, the opening run will be held, starting from Shide Crossing at 10.30 a.m.

North Cheshire M.C.C.

All motor cyclists are invited to attend the opening run, to be held on April 4th, starting from the King's Arms Hotel, Fulsham Cross, at 2 p.m.

New Huddersfield Club.

The Huddersfield Motor Cycle Club has recently been formed, and already has a membership of over thirty. The opening run was held on the 14th inst. Included in the programme for the year is an open hill-climb and an eighty miles reliability trial.

N.M.C.F.U. (Sheffield).

A concert, for which a specially interest-A concert, for which a specially interest-ing programme has been arranged, will be held in St. James's Hall, Bailey Street, on Saturday next. The opening run, to Matlock, takes place on Sunday next, starting from Owler Bar at 11 a.m.

Sutton Coldfield and North Birmingham A.C.

Prizes won in the recent Colmore Cnp Frizes won in the recent Colmore Cup Trial will be presented at the annual dinner, to be held on April 16th, in the Assembly Room of the Royal Hotel, Sutton Coldfield. Dinner tickets 15s. each, obtainable from Mr. H. R. Lane, "Kingsley," Lichfield Road, Four Oaks.

Burnley and District M.C.C.

The proposed amalgamation of this club with the East Lancashire Motor Cycling Club was fully discussed at a special meeting held on the 17th inst. It was decided to drop the proposal owing to the difficulty experienced in arranging suitable terms. New officials were appointed, and the title was changed to the Burnley and District M.C.C. A Reliability Trial is arranged for next neuronny Iriai is arranged for next Sunday, over a distance of about 90 miles. The secretary is Mr. A. Taylor, 18, Hattersley Street, Burnley, and the sports secretary, Mr. J. H. Place, 8, Dugdale Road, Burnley. sprocket or pulley, and where chains are fitted the enclosing of the primary drive from sparking across the points.

is considerably simplified. A further advantage peculiar to this device is that the three-spoked flywheel allows the action of the contact breaker to be action of the contact break? The action of the conserved at whatever speed the engine is running; incidentally, it may be remarked that we have never seen a contact breaker on any type of magneto so free actually in use, however, the flywheel is completely enclosed by a pressed alu-minium cover, which is retained in position by three springs fixed to the back plate. A considerable range of advance and retard is obtained by swinging the back plate by means of a lever, which itself forms the clamping screw controlling the amount of frictional grip of the plate on the extension of the crank-shaft bush.

CLUB NEWS.

North Derbyshire M.C.C.

The meeting of East Midland Club representatives, which was arranged for Saturday next, has been postponed until after Easter.

Nottingham and District M.C.C.

An important speed trial has been arranged for August 7th, to be run in conjunction with the Sheffield, Derby, Lincoln, Chesterfield, Ilkeston, and Loughborough Clubs.

Bournemouth and District M.C.C.

Weather permitting, the inaugural run to Shaftesbury will be held on Saturday next, starting from the pier approach at 2.30 p.m. This run is open to all motor cyclists.

Westmorland M.C.C.

The closing date for entries in the open hill-climb, at Horton Scar, is March 27th. Entry forms are obtainable from the hon. sec., Mr. W. D. Stewart, Beechwood Cottage, Kendal.

Dunheved (Launceston) and District M.C.C.

Over sixty members are now on the roll of this club. The first competitive run will he held on Easter Monday, the destination being Truro. Absolute non-stop conditions are to be observed. The control on the outward journey will be at Bodmin, and on the return at Wadebridge level crossing. Members are requested to support this event in order to make it a great success.

Warrington M.C.

At the general meeting held on the 12th inst., the fixture list for the year was made up. A run to Buxton will be held on April 4th, starting from the Royal Oak at 1.30 p.m. A run to Horton Scar, Kendal, has been arranged for April 25th is the date selected for a hundred mile reliability trial, particulars The other of which will be given later. events will appear in the "Fu Events" column from time to time.

Interested motor cyclists should communicate with Mr. H. Aldred, 58, Church Street, Warrington. The annual subscription is 10s.

On actual road tests, machines to which the flywheel magneto is fitted have proved themselves to be considerably easier to start and infinitely more controllable than those equipped with the ordinary type of magneto, and when it is possible to manufacture the new patis possible to manufacture the new par-tern in sufficient quantities, it may saiely be predicted that most of those who favour the Villiers engine will desire that it shall be so fitted. Although 'production is now well in hand, it is not anticipated that the new type will be placed upon the market in very large quantities until towards the end of the present year.

Observant readers will notice from the illustrations that there are several detail improvements in the engine itself, noticeably in the cylinder casting, and these will be dealt with separately in

the near future.

Peebles and Tweed Valley M.C.C.

To-night, at 7.30 p.m., the first general meeting will be held at the Green Man Hotel. All motor cyslists are invited.

Dublin and District M.C.C.

Twenty competitors took part in the reliability trial held on St. Patrick's Day, and of these sixteen finished. This event was organised with a view to encouraging the newer members.

Bromsgrove M.C.C.

The opening run, to the British Camp t Malvern, will be beld on Sunday, at Malvern, will be held on Sunday, April 11th. All participants should meet at the Swan Hotel, Upton Warren, at 2.30 p.m. A large attendance anticipated.

North London M.C.C.

Much anusing confusion was caused in the paperchase held recently, by the many false trails which were laid. The winner of the club prize in this event was A. R. Osborne (5½ h.p. Rover). Competitors partook of lunch at Essenden, after which an impromptu hill climb was held. The next event is a runt to Steppage on Sunday part to be run to Stevenage on Sunday next, -to be followed hy a slow hill-climb on April 3rd, a surprise run on April 5th, and a run to Harlow on April 17th.

Eastern Valley M.C.C.

An enjoyable smoking concert was held at headquarters, the Clarence Hotel, Pontypool, on the 13th inst., Mr. W. H. Oliver presiding. The opening run will take place on Saturday next, starting from headquarters at 3.30 p.m. A run to Monmonth, starting from headquarters at 4 p.m., has also been arranged. The secretary is Mr. W. Gist, 169, Manor Road, Abersychan.

Bury and District M.C.

Over twenty members took part in the recent opening run, and enjoyed a most interesting afternoon. The next event is a reliability trial, to be held on Sunday next. In order to make this a great success, all members are desired to give their support to this trial. Interested local motorists of both sexes should communicate with the secretary, Mr. John Knowles, 457, Rochdale Old Road, Bury.

15% reduction in fuel consumption.

Luxurious riding comfort by scientific leaf springing.

Greater resiliency by 30%, lighter frame construction, with 100% greater strength.

Four-speed gear box. Automatic lubrication.

Club News -

N.M.C.F.U. (Coventry).

On Sunday next the opening run will be held, starting from Swan Lane, Gosford Green, at 2 p.m.

Stafford and District M.C.C.

Twenty-two members attended the opening run held on the 14th inst. Tea was served at Trentham, and the whole event was most enjoyable. Local motor cyclists are invited to give their support by becoming members of the club.

Suggested Lytham Club.

A meeting was held last Monday with a view to forming a motor cycle club for Lytham and district. Local motor cyclists are invited to join, and should communicate with the hon. sec., Mr. G. H. Bailey, 7. Bath Street, Lytham, who will give full particulars.

Mansfield and District M.C.C.

At a meeting held recently it was decided to form a club for Mansfield and district. A temporary committee has been elected, with Mr. G. Mills, 16, Hall Street, Mansfield, as hon. sec. A11 interested motor cyclists are requested to write to the above address for the necessary particulars.

Harley-Davidson M.C.C.

A club for Harley-Davidson riders is about to be formed, which will cater generally for riders of these machines. The idea is to commemorate the services rendered by H.D. riders to wounded soldiers and sailors during the war. Club runs, competitions, and social functions will be organised. Particulars may be obtained from Mr. N. Mitchell, Harleyson House, 74, Newman Street, London, W.1.

Widnes M.C.C.

Seven new members, in addition to the original members, were elected at the anunal general meeting held recently, and Mr. E. Schofield was elected president. It was decided to allow members to choose and captain their own runs in turn, as during last year. On alternate Sundays a competition will be held to cover the whole of the runs. Members will be credited with a pre-determined number of marks for attendance, and these will be deducted for various transgressions.

High Wycombe and District M.C.C.

The annual general meeting of the above club will be 'hèld at the Swan Hotel, Paul's Row, High Wycombe, on Monday next, at 7.30 p.m.

Hull M.C.C.

An informal but well-attended and enjoyable run to Garrowby was held on the 14th inst., over thirty members participating. An excellent lunch was served at the Feathers Hotel, Pocklington.

Derby and District M.C.

Next Sunday is the date selected for the opening run, and the destination will be Cramford. In order to make a good start, all members are earnestly requested to give this event their support.

Bridgwater and District M.C. and L.C.C.

At a meeting of motorists, held on the 15th inst., at the Golden Ball Hotel, it was unanimously decided that the above club be formed and affiliated to the A.C.U. Representatives from surrounding districts, including Burnham and Highbridge, were present. Over forty members were enrolled, and the necessary officers were elected. Intending members should communicate with the hon. sec., Mr. J. W. Hooper, The Oaks, Wembdon, Bridgwater.

A Halifax Club?

We are asked to publish the fact that no motor cycle club exists in Halifax. Our correspondent states that there are a large number of motor cyclists who would no doubt give their support to any movement organised for the purpose of forming a club in this district.

Luton and South Beds. A.C.

On Saturday next the opening run will take place, starting from the ruins of the Town Hall, Luton, at 2 p.m. sharp. A hearty invitation to all motor cyclists is extended. Tea will be served about 4.30 p.m. at the Rose and Crown Hotel, Tring.

Marlow M.C.C.

A new club has recently been formed for Marlow, and a considerable number of members have already been enrolled. The opening run was held on the 14th inst., and, although somewhat marred by the inclement weather, proved most enjoyable. Interested motor cyclists may obtain all particulars from the hon. sec., Mr A. F. H. Baldry, Marlow Common, Bucks.

Jersey M.C.C.

Great progress is being made by this newly-formed club, the membership total being over seventy.

For Easter Monday a reliability trial has been arranged, while club runs will be held frequently. Visitors to the island are assured of a hearty welome, and the hon, sec., Mr. H. N. Rannsley Gurd, Sea View, Mont Cachan, Jersey, wiil be pleased to answer any enquiries.

Birmingham M.C.C.

Members are reminded that all communications regarding, and entries for, the Easter Reliability Trial to Barmouth (outward journey only), on April 3rd, should be sent to the hon. sec., Mr. W. H. Egginton, 76, Earlsbury Gardens, Birchfields, Birmingham. Entries close on March 26th; fee 12s. 6d. This sport-ing event for the Sangster Cup is open to motor cycles and passenger machines, and promises to be a great success. Gold, silver and bronze medals, a special lightweight prize (value £5 5s.), and a gold medal for the best amateur performance will be awarded. Competitors are asked to make their own arrangements for accommodation at Barmouth.

AN ENGINE TESTING FLEET.

A selection of motor vehicles used by the J.A.P. works for testing J.A.P. engines. Reading from left to right: A 1920 Peace Model Matchless, a War Model Matchless, a four-seater Morgan with an air-cooled J.A.P. engine, an A.V. J.A.P. engined monocar, an up-to-date Zenith with a J.A.P. engine, a J.A.P. engined Diamond, and an experimental model light car, in which a four-cylinder water-cooled engine is being tested.

The Editor does not hold himself responsible for the opinions of his correspondents.

All letters must be addressed to the Editor "The Motor Cycle," Hertford Street, Coventry, and must be accompanied by the writer's name and address.

THE SPEED OF A HARE.

Sir .- I wonder if the following curious little experience would be of interest to any of your numerous readers?

On coming round a corner on my Baby Triumph, I came across a hare in the middle of the road. Away went the hare, and away I went after it. When my Cowey registered 40 m.p.h. I at last began to gain. After about 200 yards we were running "neck to number plate" at exactly 35 m.p.h., and then the hare began to slow down.

All these details are quite accurate; but I should not have thought a hare could go 40 m.p.h. TORTOISE. Edgbaston.

OBSTRUCTION ON THE ROAD.

Sir,-I am moved by the article and sketches on p. 256 of your issue of March 4th to create and offer to you a further set of sketches to keep alive the interest in the campaign against road obstruction.

GERALD B. BROWN (formerly Tank Corps).

A TEST QUESTION.

Sir,—The only answer possible to T. F. Smith's question is to get going by the aid of shank's pony, "walk." This is to get going by the aid of snanks pony, walk. Inis brings to my mind another eatch question, put to me by the officer when I joined the R.A.F., who, however, got bitten by the writer. The question was: Which valve lifts during the compression stroke? I answered: "The exhaust sometimes on machines such as the P. and M. and Ariel when the decompressor is in action."

collapse of officer and no further questions.

F. G. WATSON.

Sir,—I am somewhat surprised at Mr. T. F. Smith's test question; to me it is simplicity itself.

No respectable despatch rider would be without his pipe lighter. By gearing this off the pulley with a length of string and holding it down the sparking plug port, the job is done.

Putting all jokes on one side, if the plug were properly out of action and no replacement available, there is no answer to the question, in my opinion.

ARTHUR E. WINN.

Sir,-Intending motor drivers used to be asked the following questions, amongst others, at the test at Rouen

1. In an engine that fires in the order 1, 2, 4, 3, if No. 1 piston is on the compression stroke, what is No. 3 cylinder doing?

Their correct answer was: "Remaining bolted to the crank case.'

2. What is the most important nut on

a car? Correct answer : "The driver's."

How many nuts are there in a gear box? Answer: "There should not be any in the Answer : gear box."

If you failed to answer these correctly, even after a year or two's driving up the line, you were sent to St. Omer to be taught how to.

M 338.

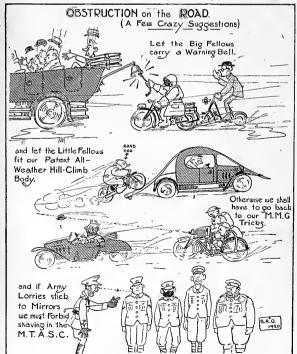

VARIABLE JET CARBURETTERS.

Sir,-With reference to Mr. J. T. Bradford's letter in your issue of the 11th inst., is not your correspondent under a misapprehension? Surely, the Patent Laws merely prevent a person making and selling an article protected by a

They could in no way prevent a person fitting a jet control for his own personal use, nor could they penalise a purchaser of such a device. The person, if any, liable to be proceeded against would be the manufacturer who sold it, and not the private motorist who used it.

S. VATCHER.

[Our correspondent is quite wrong, and Mr. J. T. Bradford is right. Any person making, selling, or using an article which infringes a patent is liable to prosecution. But whether the jet control illustrated would be held to But whether infringe any patent we are not in a position to say.—ED.]

A correspondent's solution of the traffic problem. See letter from Gerald B. Brown.

THE T.T. AND TRADE.

Sir,-We fully endorse Mr. Wells's views on the Isle of

Man T.T. race, and, as a firm, have decided to enter for it.

The Manufacturers' Union, some time ago, morally gave
its support to the race, and although manufacturers have heen badly hit since that date by subsequent events, we think that, if the race is run, it is the duty of manufacturers to enter for the event, as so much time and labour have already been spont, both by the A.C.U. and Isle of Man authorities, in preparing for the race

We believe, also, that the general public look forward to the event, and do not think that it would be in our interest to disappoint those riders and firms who interest themselves in Blackburne products. In order that it may be a representative meeting and a thorough success, we trust that those manufacturers who have intimated that they will not run will reconsider their decisions.

BURNEY AND BLACKBURNE, LTD.
S. WILDING COLE, Managing Director.

Sir,—In spite of the published policy of certain manufacturers in regard to this year's T.T. Races, I believe that motor cyclists, on the whole, would like to see this event well patronised. Several new firms have started production of very promising machines, and these, perhaps more than machines which have already established a reputation, are the machines in which motor cyclists will be interested.

I believe several young firms have decided to enter machines for the T.T. Races, and it is surprising that they

can spare the time to devote to the preparations, more so than old-established firms. The latter, too, have a reputa-tion to keep up, and it is surprising that they have under-estimated the effect of their keeping out of the classic event.

If young firms can spare the time to get their machines ready, it says something for their organisation, and, personally, I wish them luck, W.R.M. ally, I wi Maldon.

TRANSFER OF DEFOSITS

Sir,-It has occurred to us that the following method of dealing with a man who has ordered a car or motor cycle, and who, before delivery has come through, sells his delivery to someone else at a premium, can be overcome to a great extent, as follows, and the result should be that the genuine user will be able to purchase at the maker's price instead of paying a premium

A places an order for a certain make, and pays a deposit of, say, £10. Before the machine is ready, he informs the agent with whom he has placed the order that be has sold his delivery to B, and wishes the order transferred. Before this is done we suggest that the agent writes to A asking. for the name and address of B, and stating that he is willing to cancel the order with A, and return the deposit, provided

B places the order direct with the agent for the for the particular delivery allotted to A, and conditionally on B paying a deposit of £10 and £1 for expenses of transfer, the machine, when ready, to be supplied at the makers' list price. If A is not prepared to do this, then he must either for feit his deposit in full or carry out the con-tract; but if he agrees, then B would have the benefit of purchasing the machine without paying a premium.

A does not benefit in any way from the transaction.

We feel that a good many been placed by private persons by paying deposits to several several agents, without any intention of taking delivery, but solely with the idea of selling their delivery at a premium to someone else. It would be interesting to have your readers'

views on this matter.

H. TAYLOR AND CO., LTD.
H. TAYLOR, Managing Director.

COOD SERVICE.

Sir,-I should be glad if you will publish the following appreciation.

Motor Manufacturing Co., Ltd., supplied me The B.A.T. in August, 1919, with one of their combinations, of which I have the highest opinion. Since, I have required two small replacements, together with a little advice. Almost by return of post these requirements were received. This certainly speaks well for the service these manufacturers have for dealing with riders of their machines, and it is splendid for dealing with riders of their maximums, and it is shierance to know that a firm is ready with spares, so that one does not have a machine laid up for an uncertain period. May I add that your paper, which I have taken regularly for several years, is a great help to old and new riders, and most valuable advice is obtained by reading it regularly.

ARTHUR LAUD.

LACK OF DRIVING CAPABILITY.

Sir.-I recently witnessed a bad smash on the Reading Road, which, as far as I could ascertain, was caused entirely by a sudden fit of "wind up" on the part of an

entirety by a sunden in of "wind up" on the part of an inexperienced driver of a heavy sidecar outlit.

Fate is no respecter of persons, and, alas, the most experienced rider is always liable to accidents. It seems to me, however, that at present the safety of the road is menaced by a large number of riders of all classes who venture out before they have properly mastered the handling of their mounts. Can nothing be done to prevent totally incapable drivers using the main roads?

RONALD S. WHITING.

TYRE MILEAGE.

Sir .- Referring to the letter from E. S. Bovell, in your issue of March 11th, it is possible that the following record of the running of a 1914 A.J.S. may be of interest.

My mileage is not so great as that of your other correspondents, but my figures may be of use. The outfit was bought second-hand after doing about 2,500 miles, and the following

second-nand after doing about 2.500 miles, in the record of my own running:
MILEAGE SINCE PURCHASING.—Solo, 1,726 miles; with side-car 5,316. Total, 5,042 miles.
CONSUMPTION.—Petrol, 6½ gallons; benzole, 70. Total, 764 gallons = 65.9 m.p.g.

of gallons = 65.9 m.p.g. Oh. -44 gallons Vacuum B.B. = 1,186 m.p.g. Oh. -650 x 65 mm. light car tyre: Tyres.—One Palmer cord 650 x 65 mm. light car tyre; ran 2.653 miles on the back wheel, transferred to the front wheel and ran 2,389 miles (5,042 in all), and then sent for retreading. One Dunlop grooved 650 × 65 mm.; ran 2.655 miles on the front

miles on the front wheel, and ran 295 when it was miles, when it was badly burst and replaced by one Bates, which, on the back wbeel, 2,095 · ran miles, and is now not nearly worn out. The sidecar has been shod only with the worn tyres removed from the motor cycle on purchasing.

DECARBONISING AND VALVE GRINDING.-(1.) On taking de-livery. (2.) After livery. (2.) 377 miles (unnecessary). (3.) After a further 1,467 miles. After a further (4.) 1,830 miles. (5.) After a further 1,368 miles. REBUSHING ENGINE.

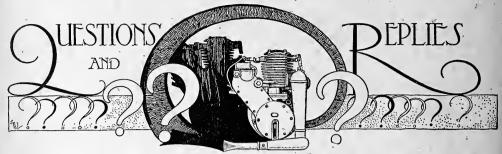

-Nil. And no need for it now after a total of 7,500 miles.

R. S. BOWMAN.

OVERHEARD ON A MAIN ROAD (Possibly Your Favourite Stretch of Highway).

"Oh, Egbert! is this one of those Europ machines you told me about?"

A selection of questions of general interest received from readers and our replies thereto. All questions should be addressed to the Editor, "The Motor Cycle," 20, Tudor Street, London, E.C.4, and whether intended for publication or not must be accompanied by a stamped addressed envelope for reply. Correspondents are urged to write clearly, and on one side of the paper only, numbering each query separately, and keeping a copy for ease of reference. Letters containing legal questions should be marked "Legal" in the left-hand corner of envelope, and should be kept distinct from questions bearing on technical subjects.

Piston Clearance.

It is my intention to fit new pistons to my 6 h.p. J.A.P. engine, and I should be most grateful if you would inform me the clearance to allow between them (cast iron) and cylinder wall?— F.J.P.

The clearance should not exceed 4-1000ths at the top and 3-1000ths at the

Fork Motion and Speedometer Readings.

I understand that the radial motion of certain spring forks renders a speedometer unsatis-factory on the front wheel. I have one which I used on the front wheel of my previous mount, and which gave excellent results. Can I in any way make use of this speedometer on my present machine? What arrangement do you recommend?—

Speedometers are usually fitted to the front wheel, despite the radial motion of the fork, which has only a slight effect on the accuracy of the reading. You might arrange your speedometer to be driven from the back wheel, and the makers will probably supply the special fittings necessary.

Timing, Gear Ratios, etc.

Will you kindly tell me: (1.) Best all-round ignition timing for a 3½ h.p. single. (2.) Is the top gear normal for 3½ h.p. three-speed with teeth as follows: Rear wheel sprocket 34, small gear sprocket 13, clutch sprocket 25, and engine-shaft 14? (3.) Cause of not being able to open B.B. carburetter air lever right out. B.B. carburetter air lever right out.
(4.) What horse-power would an 80 × 80 mm. engine give? (5.) What results if it were possible to reduce the compression space or increase it of my engine?—M.G.T.

(1.) The spark should occur when the piston is 10 mm. from the top of the com-pression stroke with the control in the fully advanced position. (2.) The gear ratio is 4.93 to 1, and this should be quite satisfactory for ordinary solo running. A slightly lower gear would be prefcrable if the machine is used with sidecar. (3.) If you wish the carburetter to take full air, it will be necessary to fit a larger jet, or

if yours is the type having a variable jet needle attached to the throttle, you will no doubt find an improvement if you raise the needle from \(\frac{1}{2}\) in. (d.) The engine is of \(402\) c.c. capacity, and at normal revolutions would give approximately \(4\) h.p. It would be nominally rated at \(3\) h.p. (5). You can easily reduce the compression by fitting a thick washer between \(\frac{1}{2}\) in the property of the compression of \(\frac{1}{2}\) fitting a thick washer between the cylinder base and the crank case. Compressed fibre or aluminium is the best material, and the former is preferable. The effect of so doing would' be to render the engine very slightly less powerful, but at the same time it would be considerably more controllable and smooth running, and would probably climb hills a little better, but at a lower speed. It is usually not possible to raise the compression without making structural alterations to the engine, such as fitting a slighty longer connecting rod or a special pistou. In this case, the running would be less smooth, and the engine might be prone to overheating and knocking. would probably be more efficient, however.

Re-registering a Machine.

I have a 23 h.p. motor cycle,

of which I am the third owner. However, having forwarded the 1s. for transfer of the number to myself, I was informed by the county authorities that the cycle had not been registered by the previous owner, and asked my assistance in tracing him. I replied to their query, giving the name and address of the person who previously owned the cycle. The authorities replied, saying that they were unable to trace the pre-vious owner, and requested me to forward another 4s. for a new number, as the old number was of no use. Not hearing immediately from me theythe authorities-wrote me saying that they had declared the old number void, and that I was not to ride the cycle on any account. What I want to know is: Am I responsible for the paying of the extra 4s., due to the inability of the authorities to trace the previous owner?-T.W.D.

If the previous registration numbers have been cancelled, you will be compelled to re-register the machine, and the full fee of 5s. will be chargeable. We should advise you to pay this.

READER'S REPLY.

Four-stroking.

In a reply to a correspondent in your issue of March 11th you say that fourstroking is a common failing of all two-stroke engines; may I, therefore, in fairness to a two-stroke engine which does not possess this failing, be permitted to say a few words on its behalf? The machine I refer to is the 21 h.p. New. machine I refer to is the 2½ h.p. New. Hudson. I ride a 1914 single-gear model fitted with a variable jet B. and B. car-buretter. I use a K.L.G. plug, and usually run on benzole. It never four-strokes, and I can run it as slowly as 6 m.p.h. and two-stroke perfectly. Whether it is due to the design of the engine or the carburetter or both -I cannot say. In concluding with the usual disclaimer, may I ask whether any of your readers have found that beuzole is injurious to solder?—Eric A. Stan-

TWO OF THE WONDERS

The F.R.S. Lamp was designed, tested, and originally made in sight of the marvellous structure known as the FORTH BRIDGE. This connecting link between South Queen's Ferry and North Queen's Ferry or Dalmeny is 8,295 feet long and 342 feet high and took 10 years to build. The largest liner looks like a toy while passing underneath. The influence of such a structure made itself felt on the designer of the F.R.S. Iamp, and our lamps have led the world in design and beam power ever since.

F.R.S. LAMPS, "Beam" Works, Pershore Street, BIRMINGHAM.

"Biggest Dealers in the South"

A Personal Word by JULIANS

Easter will be upon us in another eight days, and if you have not secured a machine for the holiday it will be very unwise to delay any further

¶ We have the following machines in stork for immediate delivery:—

CLYNO 2-stroke, 2-speed O.K. JUNIOR 2-speed NEW HUDSON 2-stroke, 2-speed

These will be sold at List Prices as usual.

¶ If you wish to make sure of one, we would advise you to telephone us, then wire a deposit, and we will hold machine pending your instructions.

7 out of 9

In reviewing the

COLMORE CUP TRIAL

"Motoring Cycling" says the performances on the whole were poor.

But were they? Certainly not as regards those riders whose machines were JOHN

BULL BELTED, for in spite of slimy roads and severe conditions generally

7 awards (out of 9 starters)

were gained by riders who used the

JOHN BULL DEEP DRIVE BELT

and, mark you, these included

4 GOLD MEDALS

"7 out of 9"—not a bad showing, you'll admit. And if the JOHN BULL Belt reveals such worth under those severe conditions, would it not prove its exceptional merit to the ordinary rider—to you, who may never dream of putting it to so severe a test? It would So see your dealer about it.

miles, offers; also 1916 7-9h.p. M.A.G. Matchless, 11420

MATCHLESS New Spring-frame Model.—Orders model on view. Replacements for Matchless models of all dates in stock. Tassell, 1p, Bloomfield Rd., Plumathd, S.E.

Repeatedly spoken "the most Spring efficient Fork on the road"

and the continued increasing demand which we receive for it, amply justifies the assertion.

We have recently acquired additional factory accommodation to substantially increase our present large output, and the equipment of the new works for the manufacture of the BRAMPTON BI-FLEX is rapidly nearing completion.

Meanwhile we are unable to replace other makes of forks with the BRAMPTON BI-FLEX on privately-owned machines in view of our commitments to the large number of manufacturers who are using it as a standard fitment to their machines.

We shall be pleased to forward you our illustrated booklet fully descriptive of the features which have made this fork famous, on request.

Sole Makera:

BRAMPTON BROS., LTD. Head Office: OLIVER ST., BIRMINGHAM.

BI-FLEX

MOTOR CYCLES FOR SALE.

Spring is here

You can reap the full Spring's

Invigorating **Properties**

by fitting Ustikon Soles. They give Fresh Life

> to the boots and impart Energy

to the wearer.

We hope all our readers will not miss this chance of health and prosperity.

They are easily stuck on and gnaranteed to hold as firmly as rivets or sewing. Follow the instructions, you can repair your own boots, make them absolutely waterproof and knock 50 per cent. off your repairs bill. They last twice as long as leather. One great advantage is that boots are not ruined by repeated nailing, and by replacing Ustikon Soles the foundations outlast the uppers.

> are treated by the Layton Garages as a call in person, and are followed up by faithful service, as the following extracts from letters received will show-

> "I thank you for the consideration, yel-1-1920, you have shown me in the moster of my order In a world of peremptory merchants, such treatment is refreshing."

Penrhyndendraeth, 19-2-1920.

"It has been a pleasure to do business with you and I sincerely thank you for your courteous and even generous treatment which, I can assure you, was greatly appreciated by—

was greatly exprecuted by
Newcostle-upon-Tyne, 1-2-1920.
"Thank you very much for your letter
of Jan 28th, and for the yood wishes
which I appreciate very much. Your
gonerous treatment is very a different to
the way I have been treated by others,
and in future! shall have no hes diction
in placing all my orders with you."

Durham, 5-2-1920.
"I am very pleased with your straighttorword business methoas and your
courteous attention to postal clients."

We have high ideals and try to live up to them.

SEND US YOUR ENQUIRY, distance is no detriment to successful business. We offer the following well-known makes for

[9111]

FLEXEKAS

An air leak preventer and valve stem lubricator that requires no packing.

The fitting consists of an airtight flexible spring casing enclosing the valve stem; the top eud fitting into a special copper asbestos cage, which abuts the guide.

The easing is supplied filled with special heat-proof graphite paste,

PRICE 2/6 EACH.

When ordering, state and year

ECONOMY. Your carburetter jet is necessarily large to allow for leakage by the valve guides

large to allow for teakings by the varie beautiespecially if worn.

EASY STARTING. Nothing worse than air leaks.

SLOW RUNNING. Ditto, especially if some guides are worn worse than others.

LUBRICATION. Saves friction and wear at a vital spot, and if your valve guides are good keeps them so.

GENERALLY. A sweeter valve motion with elimination of valve bounce. FITTING. Remove the valve spring collar and slip on the fitting—that's all.

Obtainable direct from the patentee:

CLIFFORD PRESSLAND, A.M.I.E.E., Engineer. HAMPTON-ON-THAMES.

SIDECAR ATTACHMENTS.

ependable Motor Cycles

Famous for their great achieve-ments and performances, the Clyno and the Carfield repre-sent the highest standard of motor cycle production.

CLYNO, £70 The world-famous lightweight,

CARFIELD two-stroke, 3 different models, 2½ h p. Vuliers Engine, clutch model, kick-starter £68/10

Two-speed model, 21 £62 Single-speed £53/10

All sold at maker's list price

SOUTHERN'S

St. George's Road. BOLTON.

Tel.: Bolton 223.

At Our Expense.

Fit your lightweight mount with a 2-speed gear box.

We will supply you with a mechanically perfect countershaft 2-speed gear box, complete with controls and plate for bolting on. Finest workmanship, latest design, adopted by leading manufacturers.

We guarantee that it can be fitted to a LEVIS, or other Lightweight Motor Cycle, in ten minutes without outside help.

We allow you to have one of these Gears and test it: if you find that it does not give you the utmost satisfaction, you may return it within 28 days, and we will immediately return you cash.

Do not worry any more about labouring up hills and eventually conking out; you do your engine much more harm than the Gear will cost you, and you will get a pleasant, sweet drive all the way, which, in itself, will easily compensate you for your outlay.

Remember, we will send you your money back. We take all risk. Price complete, £7 10 0, plus 2/6 carr. and packing, complete with change speed mechanism and engine sprocket, the whole machined interchangeably, ready to drop on and ride away.

BOOTH BROS., Bishop St., COVENTRY.

"A NEW invention of very great value."

Road Rider in "The Motor Cycle."

All dangerous nails are kept out of rear tyre by the Monie

Puncture Preventer.

Of every 100 punctures, the rear tyre gets 90. The P. prevents these and so reduces punctures by 90 percent. We sure antee this. The P. adds to life of rear cover, and also insures it against "sudden drath" The P.P. is fitted in five minutes to Triumph, Douglas, J.J.S., Rudge, Arieibeld, P. Rudge, Arieibeld, and the property of the Slot allows rapid adjustment.

Money back if not ratisfied.

When ordering, give name of machine, and if Adapter is needed.
Price 10 6. By post 11 PUNCTURE PREVENTER

Easter Events.

Γ is only natural that motor cyclists should take advantage to the full of a national War weariness has bank holiday time. given added zest to motoring bank holidays. It is consequently not surprising that we find a galaxy of fixtures for the forthcoming wee...end, including certain long-established events, such as the Northern motor cyclists' meet at Richmond. Gatherings of this description are of the greatest possible service to the movement, for hundreds of motor cyclists will come together in a spirit of friendly rivalry and will exchange ideas on motor cycle matters. Owners of new models are encouraged to attend, and, amongst other prizes, there is one for the smartest turnout.

The M.C.C. London-Land's End run is another popular event, which has attracted nearly two hundred entries. This year an element of novelty is included in that the outward route has been varied to include Porlock and Lynton hills, and, incidentally, some of the most beautiful scenery in the British Isles. makes the journey very much more strenuous, but, in compensation, entrants are free to return in their own time. Everyone will be pleased with the innovation, for the long return journey at scheduled speed was apt to be wearisome and, with the exception of the magnificent stretch of Dartmoor, between Tavistock and Ashburton, there was little of outstanding interest.

The Birmingham Club's run to Barmouth also finishes at the objective town, and, consequently, competitors are free on arrival to spend the week-end at the coast.

Two open hill-climbs and a large number of club events have been arranged, so that motor cyclists who prefer to spend their holidays tour-

ing in company have plenty of choice.

To all our readers we would extend our heartiest good wishes for fine weather and absence from trouble. A final word of advice. Show consideration for all other road users, and never indulge in reckless driving.

Identification Dates.

LTHOUGH makers of motor cycles generally are only too willing to state the delivery date of any machine when the identification number is given to them, too many purchasers of second-hand machines depend upon the statements as to age which are given to them by the sellers. We like to think that when these claims as to age are in error it is due to ignorance and not with any deliberate intention to deceive.

It has been suggested many times that it is particularly desirable for makers to give a public statement regarding the dates of their machines, but for some reason best known to themselves, considerable reluctance has been shown in giving such information, probably because it would show the yearly outputs. Why this question should be regarded as a secret is not at all clear, as even the smallest makers could show an output of which they should be

One can perhaps understand hesitation in those cases where the year's output has totalled, contrary to popular conception, only a low figure; but in such instances the necessity of giving dates and numbers, naturally, is not so important as in the case of makes of which there are large numbers on the second-handmarket.

At the present time second-hand motor cycles command such high prices that it would be particularly annoying to a purchaser to find that he had been mistaken in his estimate of age, and it is unfortunately true that there are many who are only too anxious to take advantage of

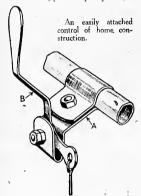

the ignorance of the uninitiated. Elsewhere in this issue, we are able to give the numbers and dates of one well-known Continental make, of which considerable numbers have been sold in this country, and we hope British manufacturers will follow the excellent lead set them in circumventing a state of affairs which lends itself to confusion and misunderstanding.

IDEAS: Useful and Ingenious.

A Simple Control Lever.

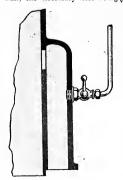

By means of a suitably-shaped clip bolted to the bottom rail of the motor cycle frame, a satisfactory control to the magneto may be obtained without soldering fittings on to the tank. A shows the type of clip required, while

B is a simple lever made from sheet metal. The method of fitting is clearly shown in the illustration. This control is useful also for operating extra air devices, variable ignition, etc.—N.H.

Priming a Two-stroke.

To facilitate starting a two-stroke engine in cold weather, a in gas tap may be fitted for priming purposes. This is screwed into the transfer port wall, the necessary hole being first

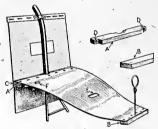

An easy starting tip for two-stroke users.

drilled and tapped. A few drops of petrol injected directly into the passage enables the machine to be started from cold with certainty and ease. If required, a small pipe from the tank may be fitted directly to the tap, thus making it unnecessary to carry a separate petrol squiret.—B.C.W.

Combined Silencer and Mudshield.

T is claimed that the silencer illustrated herewith not only tends to an exceptionally quiet exhaust, but also keeps the crank case and lower portion of the machine generally in a clean condition. The whole is built up of sheet iron with welded joints, is about 2½in.

The Douglas engine and gear box are kept clean by this simple undershield.

in depth, and is turned up at the front as shown. To obviate any tendency to vibration, the gases on entering are deflected by means of baffle plates alternately right and left, finally emerging through a pipe with fish-tail end.—

An Improvised Link.

IF a repaired belt is too short for use, and no link is available, one may be made up from the spare fastener which is usually to be found in every

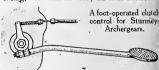

A roadside belt repair.

toollag. The illustration shows clearly how this is done. A piece of leather (or broken belt) is inserted at Λ to protect the pulley flanges —H.G.B.

An Easy Conversion.

FOR those readers who own machines fitted with Sturmey-Archer countershaft gear boxes, and who prefer a foot-operated clutch, the method of conversion described herewith may be interesting. As will be seen, all that is neces-

sary is a long pedal, which is reduced in its diameter at the end to replace the bolt which normally holds the clutch operating arm in position. This pedal should be long enough to be easily reached by the rider's heel. The fitting of this pedal does not interfere in any way with the working of the standard handle-bar control.—F.D.S.

A Simple Anti-theft Lock.

A DEVICE of some description to haffle motor cycle thieves is now almost a necessity. Absolute safety is assured by means of brazing two small eyeleted lugs A on to the front forks in such a position as to register with a lug B riveted on to the rim. The relative positions of the lugs are clearly shown in the illustration. A steel pin C is inserted through the eyelets, thus rigidly locking the wheel. By means of this arrangement the spokes cannot be damaged, If desired the lugs may take the form of detachable clips.—W.H.T.

To baffle thieves the front wheel is rigidly locked by this device.

No Takers.

RECENTLY enquired if any reader could teach me to ride one motor bicycle whilst leading another by its handle-bars. I have only had one reply from a reader who attempted the stunt for a bet, and lost both his wager and a lot of skin.

Easy Starting of a Scott.

AS any reader got a first-class wrinkle for starting a Scott from cold on the first kick? I am a Scott novice, and, though I experience no real difficulty in getting away from cold, it does not seem too easy to manage with one kick, as we can most of us do with four-strokes. Suggestions at present to hand are to substitute short reach compression taps for the plugs fitted in the heads of the cylinders, and to use these taps for doping; or to connecting the drain tap of the Scott petrol tank to a nipple screwed into the induction pipe. The sole objection to this dodge is that meddlesome urchins may operate the tap and flood the crank case with petrol. Mr. Binks's recommendations include the use of an air strangler and necessitate half-a-dozen kicks. I have seen repeatedly Scott experts get away from cold with one kick and should like to know how it can be done.

Three Inch Tyres.

If ALWAYS retract any statements which subsequent experience proves to have been wrong, and at present I am much regretting the aspersions which I once uttered against three inch tyres. I tried them some years ago on fast machines, and formed the opinion that they rolled in speedy corner work, unless they were inflated too hard for additional comfort. In view of their weight and cost I concluded that they were best relegated to monster sidecar outfits. Just now I am using a pair of three inch Palmer cords on a touring machine. I still reserve my judgment as to how these tyres may suit a road racing mount. but hey are unquestionably the goods for comfortable tourng. They go about halfway towards the comfort of a pring frame, they wear with astonishing imperturbability, and they are rock-steady on grease. In future, shall get tyres of this size for all my touring machines, vhen they can be fitted without costly structural ilterations.

Cheap Garages Wanted.

S I go up and down the country. I notice that the farmer, the farmer's sons, and, in a few cases, the farmer's hinds, are buying motor cycles. This is a commonplace as far as it concerns the big Iidland farms, but the same process is evident on a maller scale where the average acreage of a farm arely reaches three figures. In many cases it is either mpossible or undesirable to drive a motor cycle up the farm buildings. The farm roads are negotiable by carts and also by tanks, but a quarter of a mile of mud which would make a 1914 Army camp feel like a clean slate is no going for a two-wheeler, and does not attract a sidecar. Lots of these buyers are putting up garages for their new cycles and cars at the nearest point on the farm to a hard road. It is difficult to suppose that the local tradesmen can knock up a good shed more cheaply than a mass-production firm of the Boulton and Paul type can do it. When the shortcomings of so many suburban villas from a garaging standpoint are taken into account, there must be a big demand for small, cheap garages just now.

And Benches.

NOTHER want which some 'cute trader should foster and supply is that of a motor cyclist's bench. Though I have had a lot to do with the tool trade, at the moment I can only name one firm which could supply me quickly with a small bench, fitted complete with a good-sized tool rack, small bench, and drawers to contain odds and ends. Yet hundreds of motor cyclists require such a bit of furniture, and would rather buy it than many of the purely ornamental gadgets on which they waste so much money every year. Take this paragraph as a tip for some demobilised officer who is hunting round for an investment and a job.

Low Centre of Gravity.

IT is rather late in the day to begin querying the standard position of the engine in the frame; but I am beginning to wonder whether changes are not imminent. We have all seen in the Isle of Man that the Scott holds the road as no other machine has ever done. To see Philipp or Applebee or Wood. corner in a race was enough to frighten a man whose ideas of tilting on a bend were culled from a vertical single-cylinder. It used to be said that the Scott open frame was a big factor in these stunts: that it whipped a trifle where a stiffer frame would bounce. Not being an engineer, I swallowed this myth, and mentally credited 50% of the Scott corner work to its open frame, and the other 50% to its low centre of gravity. Time went on, and I tested other open frame machines, without finding that they clung to the road, Scott fashion. Then the 3 h.p. A.B.C. came along, with a rigid frame and a low centre of gravity, and, lo! it was just about a second Scott for corner work. Now few of us wish to tear round corners as Tim Wood does in the Isle of Man. But the low centre of gravity is an immense benefit in ordinary touring. It means that balance does not become precarious when your front wheel hits a big stone or a deep pot-hole. It means that when the roads are slimy you need not slow right down and take a corner with the machine vertical. On a Scott or an A.B.C. I can lean over with perfect safety on grease to as sharp

Occasional Comments .-

an angle as I dare on dry roads with a high centre of gravity. Not far from my door there is a very sharp corner, which is generally greasy, and is succeeded by quite a nice little pitch of gradient. I like the corner with a low centre of gravity, but I always scrabble it if my centre of gravity is high.

The Lorry Nuisance.

OME motor cyclists hold that the drivers of big lorries and chars-à-bancs deliberately obstruct them; and there can be no doubt that a load of trippers enjoy a practical joke, and sometimes egg a not-reluctant driver to play pranks. But my own experience has always been that the driver of the big commercial motor is quite as well-mannered as the so-called "pleasure" motorist, and my own difficulties in passing the big fellows have always been due either to the narrowness of the road concerned, or the driver's ignorance of my presence at his tail. Compulsory mirrors will be a great help, but two other expedients are necessary. Prolonged drives, day in and day out, are extremely monotonous for the unfortunate driver, and it is highly improbable that the compulsory mirror would receive as much attention from the chauffeur as it requires; he will continue to

concentrate on the road ahead, and will not watch his mirror continuously. But if we all used alarm signals with a note which was audible above the thunder of

three-tonner, we could always pass those drivers who are gentlemen, provided the road was wide For those enough. drivers who are surly or given to practical jokes, prosecution is the sole remedy. If this nuisance reappears next summer in Wales or the Lake District — and 1920 will see enormous fleets of lorries and chars-à-bancs on our roads — a repressive campaign must be initiated. The solitary motor cyclist, who is viciously bullied by a juggernaut full of half-tipsy trippers, is at their mercy for the time being. But he can take the number, and report it to his club -the A.A., or what

not—and the clubs will find means of identifying and punishing the obstructionists. Indeed, in most cases a remonstrance addressed to the proprietors of the vehicle concerned is sufficient.

To Find Air Leaks.

ERE is a reader's suggestion for finding air leak based on the theory that compression afford a better method than suction.

(1.) Shut the throttle and air levers.

(2.) Turn engine forwards until inlet val-

(3.) Turn engine backwards. The piston wil rise and the inlet valve open. A compression is thu created in the induction system, and leaks may be detected by ear, oil squirtings, etc.

Greasing the New Machine.

In N dry parts of England, where the rainfall averages less than 24in. per annum, plating will last well provided the machine is promptly cleaned after every ride. But there are places in these islands where the rainfall touches about 80 or join. per annum and even where this frightful figure is not approached the atmosphere is often so humid all the year round that rust gets in its deadly work in garage between rides, as well as after a sprint in a shower or a lengthy mud plug. That owner is to be envied who lives in a dry climate and has unlimited leisure. The rest of us must grease our machines all over as soon as they are delivered. For my own part 1

unpack the new jigger, thin dowr some grease or thick oil on the kitchen range, get a medium sized paint brush, and obscure

all the bright parts under a green film at once. As I go in for a warm after this freezing job, I muse on many things. For example, as to why the small nuts under the saddle and on the rear number plate should be nickelled? And whether I should really be blown off the saddle if I orderec disc wheels for my next mount, and ventured it across the moors in one of our frequent local gales; And why hub barrels are generally plated? Still, I retain one consolation - nay, two This grease coat wil last until selling day when I shall wipe i off with the super imposed filth and

display a glittering machine to a fascinated purchaser and, furthermore, it will restrain garage loafers from pawing the jigger after the fashion of their breed. But some labour is involved if I covet the club "appearance prize"!

THE NEW MOUNT.

Is there anything quite so interesting as the first good run on a new machine?

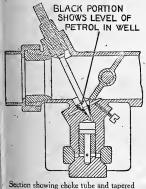

THE CAPAC CARBURETTER. A Single Lever Instrument with Variable Jet.

THE Capac carburetter has had a full year's trial in the hands of the public, and has behaved in a very satisfactory manner on the Coulson-B. and numerous other motor cycles. We have a very happy recollection of it during a trial of the first named motor bicycle, and we know of others which are giving excellent satisfaction.

Among the chief advantages of the

Capac carburetter are its simplicity and conomy. It consists merely of the ordinary type of float chamber, in which the oetrol is delivered at the top, and a apered needle set at a certain angle unning into the jet orifice. This needle s capable of being screwed up or down s capable of being screwed up of down.

o as to allow more or less petrol to be
trawn through. The point of the needle
ests in a well of petrol, and almost touchng it there is a tiny hole communicating
etween the well of petrol referred to
and the engine side of the throttle. This mall orifice is used for the purpose of a low running or by-pass jet, and through there flows a small quantity of strong

needle in well.

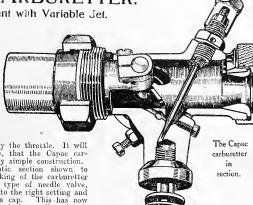

HE physical effort required to lift a heavy motor cycle on to its stand is considerable, and, realising this, Mr. George, of 50, Bramble Street, Covy, has evolved the stand described illustrated herewith. As will be in, its construction is simple and incensive, consisting of two legs which joined at the extreme ends by a wed distance piece. Two cross maters are fitted, one at the end of long leg and the other at the most venient point along the curved maters in order to engage with the olding-up." clip on the mudguard. I whole stand is pivoted on two hinge s above the centre of the back wheel. 'HE physical effort required to lift a s above the centre of the back wheel. of these hinge pins is screwed, and ries a wing nut which is used to the stand in any position by means two serrated washers, one of which ixed to the back stays of the machine the other to the inside of the stand.

mixture for starting and slowrunning purposes.
As the throttle is opened the suction on the slow-running jet decreases and petrol flows through the main jet, and at the same time air passes in ria, the choke tube, its quantity also

being controlled by the throttle. It will be seen, therefore, that the Capac car-buretter is of very simple construction. The diagrammatic section shown to

illustrate the working of the carburetter indicates the old type of needle valve, which is adjusted to the right setting and then covered by a cap. This has now been eliminated, and the needle valve is surmounted by a milled nut, round the edge of which a number of holes is drilled. Through one of these holes there is inserted a small screw, which allows the milled nut to be turned only between two limits. The position of this screw is found first of all by the makers, so that the carburetter is approximately right when delivered from the works, and it allows the mixture to be varied from strong to weak, or vice versa, and enables the carburetter to be adjusted to suit varying atmospheric conditions.

The new device prevents unauthorised interference with the setting of the carbu-retter, besides the other advantages named, and yet at the same time it allows the needle to be removed with ease in the case of an obstruction in the petrol passage, and when this is done it in no passage, and when this is done it in no way upsets the adjustment. If the adjustment is not quite correct, the screw may be removed-and inserted in another of the eight holes. There is a friction spring beneath the milled head which allows the needle valve to remain in any position in which it is put. The makers also realise the value of taking in the air

warm, and fit a muff surrounding the exhaust pipe connected to the air intake by means of a detachable tube. The top union of this is provided with a shutter allowing the quantity of hot air to be regulated.

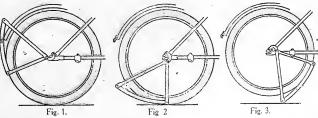

The Capac is a single-lever carburetter, specially designed for motor cycle work, and was one of the first of its kind to be placed on the market after the Armistice. It provides excellent slow running, and gives good acceleration and plenty of power. The makers are the Capac Co., Ltd., 2, Woodetock Street, Oxford Street, London, W.1.

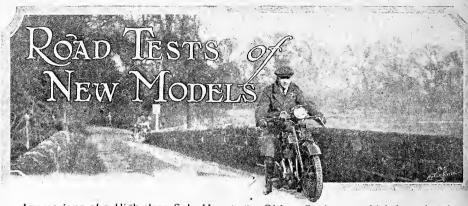

Capac fuel range control.

A LABOUR-SAVING STAND.

Fig. 1 shows the stand up for running, and held in position by the clip on the mudguard; fig. 2 the stand supporting the weight with the tyre touching the ground; and fig. 3 in the "right up" position, which is only necessary when it is required to remove the wheel. This last quired to remove the wheel. This last position is gained with a minimum of effort, as the machine runs up the curved portions gradually. Mr. George would be glad to hear from any manufacturer who is interested in the device.

Impressions of a High-class Solo Mount—the $3\frac{1}{2}$ h.p. Sunbeam—which has already won its Spurs in Competition.

MACHINE which has always occupied a place in the very front rank is the Sunbeam. With the happiest memories of a Six Days Trials' experience in the Lake District on a 234 h.p. model, it was with the greatest pleasure that the writer adopted Mr. A. S. Bowers's suggestion of an extended trial

The T section bottom bracket casting now employed. The front chain adjustment is effected by a draw bolt.

ofthe 31 h.p. singlecylinder sporting model. By reason of its good name, one, of course, expects a great deal from a modern mount with the now familiar black and gold tank,

but those expectations are fulfilled in their entirety -nay, more-on acquaintance with the machine. First impressions are everything, they say. Our trials machine was handed over tuned to the last motch and equipped to the last word. Would that we could say the same of every machine placed at . our disposal for trial! A dig at the kick-starter, and the willing engine promptly answered, the silky-acting clutch engaged, and away the machine went as smoothly as a good-class car. Gear changing proved

easy, and, in short, one was at once inspired by the feeling that the machine was in perfect tune and condition, and ready for the most difficult test. There is a great deal of difference in the controllability modern motor cycles. Some gines are docile and tick over quietly in the free position; others with smaller flywheels and less carefully designed cams wil roar and vary in their actions when not running unde-

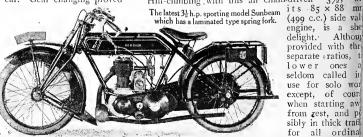

load. Need we say that the Sunbeam belongs to the former category? It is by no means a lightweight, yet its controllability, due to its well-balanced engine and conveniently arranged controlling mechanism. tributes in no small measure to the contentment of the rider and feeling of long acquaintanceship with the machine, even though that acquaintance may have been but short.

The seat lug of the 31 h.p. Sunbeam has the rear stays brazed in. An expander bolt and cone secures the saddle-pillar.

With semi T.T. bars and the new type laminate spring fork, one can imagine no more desirable type of mount for the man who desires to "get there" and back, and withal with the minimum loss of tim Hill-climbing with this all chain-driven "31/2," wi

(499 c.c.) side val engine, is a she delight. Although provided with thr separate aratios, t lower ones seldom called in use for solo wor except, of cour when starting aw from rest, and po sibly in thick traff for all ordina

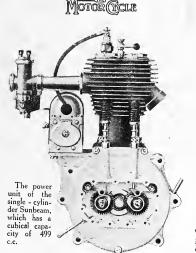

Road Tests of New Models .--

hills are quite within the compass of the top gear of 4.6 to 1 even with a rider of 113 stone up. It is no compliment to a mount of the Sunbeam calibre to instance Sunrising, Edge, and Sudeley Hills, since public trials have demonstrated that no hill with a rideable surface is too steep for such a mount. One's appreciation must, therefore, be devoted to its reliability, its cleanliness, its controllability, and its generally excellent design, leaving hillclimbing ability as a foregone conclusion. We have proved. that the clutch will stand any amount of abuse. The handiness of the detachable wheels we have not had occasion to demonstrate with this latest 31 h.p., since the makers are wise enough to equip it with tyres well up

to their work, and which, as an almost natural result, have never punctured. A detail worthy of praise is the oil feed to the gear box, controllable by a two-way tap operated from the saddle, thus eliminating he need for periodic use of the usual separate oil gun, which, to say the least, is a nuisance and a messy peration at best. The gears, incidentally, are axtremely quiet in action, as well-cut gears usually are.

A. Cool Running Engine.

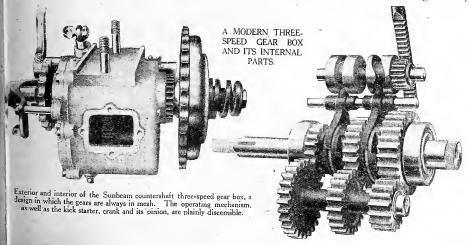

Prolonged fast running in no way affects this remarkbly efficient engine, and that the cooling is ufficient for all purposes is demonstrated by he ease with which single figure gradients are surnunted on the run. Indeed, as we have said, the unbeam owner can revel in hill work whether the pads are wet or dry, for in the event of wet, the

rider can proceed in comfort so far as the machine is concerned, buoyed up with the knowledge that, whatever the elements, the transmission, running as it does in oil bath chain cases, is working under ideal conditions. The prolonged life of chains, due to their entire protection from outside elements, needs no emphasis. In our trials we have been impressed by the absence of valve clatter; separate timing wheels are employed for inlet and exhaust with their respective cams formed upon them, the cams operating the adjustable headed tappets through rockers.

Once or twice in a rather tight corner, we have raised the left handle-bar lever expecting to operate the valve lifter, forgetting for the moment that the control of the Sunbeam front brake is operated by the left-

hand lever and the valve lifter on the right-but that, after all, is due to custom, and only confirms our opinion that motor cycle controls should be standardised. The brakes themselves are extremely effective and solidly arranged, nothing to get bent or disappear with vibration, the wide guards are a feature to admire, whilst throughout the design bears the mark of the master hand only to be expected when one realises that managers, designer, and testers alike are keen motor cyclists themselves, always out to improve, and having a high standard invariably in mind. In brief, our experience of the machine, extending over several weeks, has been entirely devoid of untoward incident, it has failed at nothing, started easily with wonderful consistency, not even a puncture has marred our enjoyment, and consequently one may justly dub the Sunbeam as a machine of unfailing reliability.

RUNNING REPAIRS & ANDOUSTIMENTS Hints on the Cursory Examination and Tuning Up of a Motor Cycle. At this time of the year, many motor

A T this time of the year, many motor cyclists are either just in receipt of a newly-acquired machine, or are contemplating extended use of a machine which has possibly been laid up during the winter mouths.

To ensure a minimum of roadside

To ensure a minimum of roadside trouble, it is well in such circumstances to overhaul thoroughly all the external adjustments, and to make certain that no part requires extensive repair, as if this is not done early in the year, considerable difficulty and delay may be experienced in getting any work done during the spring and early summer months, when repairers are usually inmutated with work.

A Road Test.

In order to ascertain the general condition and performance of the machine, it is best to take it out on a short run of about eight or ten miles; this is especially advisable when it has not been used for some time, or has only been newly purchased, and the rider is not familiar with it. After covering this distance at an easy pace, some general idea of the condition of the engine and transmission will have been gained, and a stop should now be inade to examine the various parts in detail. It will have been noticed whether the steering is too loose, and whether the forks are inclined to clash or chatter on rough surfaces. If these troubles have been noticed, it is very possible that the steering head or wheel bearings may require adjustment. Wheel bearings are best tested when the bearings are best tested when the machine is jacked up, so that the wheels can revolve freely. In the case of the back wheel, the belt should be removed.

An attempt should be made to rock the wheels sideways, and any shake or looseness in the bearings should be taken out by the adjustment provided. In the case of hubs with the ordinary type of cup and cone bearing, this is quite casily done by screwing in the left-hand cone a little fit must be remembered that the adjusting cone should always be on the near or left-hand side of the machine). The Douglas, P. and M., Zenith, and several other machines are fitted with disc adjusting hubs; in this case the adjusting hubs; in this case the adjusting disc, if on the left-hand side, has a left-hand thread, and is secured by a look ring, which must be slackened before attempting to tighten the disc. The latter process being most easily carried out by using a hammer and punch.

Uncertainty in steering may frequently be traced to faulty adjustment of the steering head bearings. The easiest

way to test this is by standing over the machine, gripping the handle-bars, and endeavouring to lift them vertically against the weight of the machine. Slake in the head bearings will at once be noticed, and the trouble is rectified by loosening the head clip bolt and screwing down the adjusting ring, which is strated immediately above it. A special ring spanner is usually required for this, but in emergencies the adjustment may be effected by means of a hammer and blant chisel; but these tools are liable to cause, a considerable amount of damage

it clumsily handled.

The above adjustments are preferably carried out after the machine has returned from its test, but their necessity can best be ascertained on the road.

Engine Adjustments.

During the test run it will have been noticed whether there was an excessive amount of vibration or whether the engine was not up to its usual standard of power. Vibration, if more than is usually to be noticed, may arise from several causes; for instance, the engine fixing bolts may be loose, or some of the bearings may be worn. The first trouble may be remedied as easily as it is traced, but the second requires more skill and experience.

Loose bearings in any of the engine parts are most readily noticed on machines fitted with outside flywheels. In the case of engines not so fitted, it is necessary to remove the belt, or, if a two or three-speed gear is incorporated, to place the gear lever in the neutral position, then while the engine is still warm hold the flywheel, pulley, or sprocket, and rotate the engine until the piston reaches the end of its stroke, then rock the flywheel backwards and forwards. Any play between the connecting rod bearings and crank pin or gudgeon pin will be felt as a slight vibration. It is this play between the parts which sets up the annoying vibration often noticed when a

Testing the hearings by rocking the flywheel.

y standing over the he handle-bars, and it them vertically. The machine is running "light" on the learning that the vibration is respectively to the machine. Shake gas will at once be obble is rectified by clip bolt and screwting ring, which is above it. A special lity required for this, the adjustment may so fa hammer and sees tools are liable to ride, it will be nearly to have the bearings renewed, this, of course, will mean dismant the engine completely and sending either to the makers or to a compet repairer. Should the machine pull whowever, and only the slightest amo of vibration be noticeable, it may assumed that the internal mechanism the engine is in good order.

Worn Main Bearings.

Small two-stroke engines, especiwith plain bearings, lubricated by "petroil" system, may occasionally a trouble through excessive play in mainshaft bushes. Not only will trouble cause a considerable amount noise and vibration at high speeds, it might account for a certain lack power due to a compression leak betwith the shaft and bush. The condition these bearings can be readily obserby taking hold of the flywheel at top and bottom as shown in the picture of the shaft and bush. The condition these bearings can be readily obserby taking hold of the flywheel sidew only the smallest perceptible amount movement in this direction is persible, but a direct in and out movement in this direction is persible, but a direct in and out movement of the shaft may be allowed up to algain. In the case of all outside flywelock-nut should be kept tightly hammed up into its place, and a special space for this purpose is usually supplied the makers. From time to time it shill be placed over the nut and a few sublows with a hammer given, of wise the flywheel may become loose the which it is fitted.

The engine having been thorous warmed up with its test run, the ris in a position to estimate the compression retaining state of the engine. skick starter is fitted, the compressions are starter in the compression retaining states are starter in the compression and the compression retaining the compress

MOTOR (PCLE

Running Repairs and Adjustments .-

should maintain the rider's weight on the pedals for quite an appreciable time, but if no starting apparatus is provided an endeavour should be made to pull the back wheel round by hand with the top gear engaged, listening earcfully the leakage of compression. It is well to remember when testing compression that the throttle should be almost fully open.
If the compression is noticeably weak,

it is as well to inspect some of the external adjustments before commencing to dismantle any parts. Notice whether the valve caps and sparking plus are tight, or whether they show trace of leakages, and if these appear to be in order examine the clearances of the valve tappets. Although the latter may appear to be in order when the engine is cold, it is quite possible that the clearance is insufficient when the engine is warm.

Tappet Clearances.

and tappet should be such as to permit the insertion of a thin visiting card, as shown in the illustration below.

valve cap in order to find out the internal state of the engine, as regards the amount of carbon deposit in the cylinder head. Should the inner surface of the valve cap he thickly coated, it may be assumed that the engine requires decarbonising,

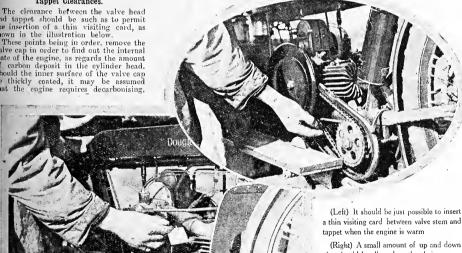

that the gaps are not too closely adjusted. About Join, is a satisfactory gap for the sparking plug points,

Transmission Details.

As a rule, there is very little attention required in maintaining the transmission of a modern motor cycle in good running order. This is especially so in the case of chain-cum-belt or all-enclosed chain drive. The essential adjustment concerns the correct tension of belt or chain as the case may be. Chains should not be run too tight. A short chain, such as that between engine and countershaft, should have about \(\frac{1}{10} \), up and down play midway between the two sprockets, and it is to be remembered that correct alignment has far more bearing on satisfactory results than a small variation in tension.

Should the chain be out of alignment considerable wear will be noticed on the

unite free. After draining off the paraffin it should be immersed in a bath of hot grease in which a quantity of graphite has been mixed, and allowed to remain in this for some hours, when it may be assumed that the lubricant has reached all the bearing surfaces between rivets and bushes of the links. Chain tension should be tested with the wheel in several positions so as to avoid "tight spots." Where the final drive is by belt tho adjustments are much more simple, and it is merely necessary to see that the belt is at the correct tension-that is to say, it should not be possible to depress it midway between pulleys more than about lin. The condition of the ends of the belt should be noticed, and if the fastener shows signs of pulling through it will be as well to cut off about lin, of the belt and refit the fastener again, making up

nd, of course, this must be done in the arage, the cylinder having to be re-loved, and the inside of the head and the iston top being thoroughly cleaned by craping off the deposit.

Grinding-in the Valves.

Granted that all the above mentioned djustments are in order and the comression is still not as it should be, it is ossible that the exhaust valves have ecome burnt, and, if so, they must be moved and ground in with carborundum owder or one of the special grinding astes specially prepared for this purpose. While the valve caps are out of the linder it is as well to examine the barking plugs, at the same time cleaning the points very carefully, and noticing side plates at one side of the chain, and if this is permitted chain breakages may be expected with annoying frequency, therefore make certain that the chain sprockets are in the same line, and that the shafts on which they are carried are parallel. Long chains such as those in the final element of the transmission from countershaft to back wheel may be permitted a little more play, say, gin. mid-way between the sprockets, and here again alignment is the most important consideration. Usually the front chains consideration. Osually the front chains are reasonably well protected, but final drive chains very often run under the most adverse conditions. If the chain is noticeably dry it should be removed when the garage is reached, and should be soaked in paraffin until all the joints are

(Left) It should be just possible to insert a thin visiting card between valve stem and

play should be allowed on the chain.

the length by means of one of the special detachable leather links, which can be fitted to almost any standard fastener.

Carburetter and Lubrication System.

If the engine has performed satisfactorily during its short test, it may be assumed that the carburetter is in order, although it is well to note whether any flooding takes place when the machine is brought to a standstill. Considerably improved consumption may usually be obtained by lowering the petrol level somewhat beyond the setting usually adopted' by the makers. Alterations in level are effected by raising or lowering the small collar fitted on the float chamber needle. In the case of top feed and inverted needle carburetters the level is lowered by tapping the collar, which is a driving fit, further down the needle. Older pattern carburetters, in which the needle is controlled by small balanced

MOTOR (YCLE

Running Repairs and Adjustments .-

weights, are altered by reversing this process, i.e., the collar is raised slightly when the level is to be lowered. Persistent flooding of the carburetter is usually caused by the needle valve seating being holds. ing being badly worn and if a very distinct ridge is found on the pointed end of the needle should be trimmed off with an exceedingly fine file, and the needle should then be slightly ground on

to its scating.

All the carburetter parts should be carefully cleaned, and it is advisable to remove the petrol pipe and notice that it is clear; the same applies also to the jet. Turning to the lubrication system,

machines fitted with ordinary hand pumps or two-strokes lubricated on the petroil system may be dismissed almost at once, as neither of these arrangements requires attention. If a semi-automatic drip feed is fitted, it should be observed that the oil passes freely. In the which utilise crank case suction to induce a flow of oil through a sight feed, it is advisable to run the engine on the stand or in a neutral position, and if it happens that no flow of oil is noticed, the trouble may be traced to defective operation of the small non-return valve which is usually fitted at the base of the sight feed body. This valve consists of a small disc of pen steel, and it should be removed from time to time and cleaned with petrol. Its action depends upon the alternate compression and depression

in the crank case due to the movement of the piston; it closes as the piston descends and opens as the piston rises, thus permitting the partial vacuum in the crank case to draw upon the oil in the tank. This system is perfectly in the tank. This system is perfectly satisfactory, but it is somewhat susceptible to temperature variations; in

engine bolted up directly to a two-speed and reverse gear box, and a tubular frame

form the chief items of specification. The

cold weather the viscosity of the oil prevents a free flow under the influence of comparatively low crank case suction, and the regulator should be adjusted accordingly.

If the engine has fired with regularity on its brief test run, it may be safely assumed that the ignition apparatus is in order; however, make certain that continued satisfaction is likely to be obtained. It is well to inspect one or two details, so that some estimation of their future life is possible. The platinum-points should first have attention, and must be set so that they open .5 mm.; they should close smartly and meet evenly, and may be trimmed with a fine

The fault can be Play in the head readily traced by lifting the may cause handle - bars as uncertain steering shown

file if the surfaces are not smooth and clean. On removing the contact breaker disc a carbon brush will be found behind This should be cleaned with petrol, as also should the track on which it runs, if the latter is oily. The high-tension brushes may also be cleaned in the same way if oil is present, and the slip ring may be cleaned by inserting a petrol-soaked rag through the brush orifice and rotating the engine. Lubricate the mag-neto very sparingly if oil holes are provided.

Final Adjustments.

Having glanced over all these points, and assuming that no troubles have been discovered which demand extensive dismantling or expert attention, it only remains to examine all parts on the machine which could possibly come loose through the effect of vibration. Carefully go over the whole of the nuts on the machine, tightening up everything

securely with a spanner. Cast an eye over the tyres, renewing the valve rubbers if they show any tendency towards gradual deflation, and systematically lubricate with thin oil all moving parts such as controls, brake pedal, wheel bearings, front fork spindles, and, in fact, every point where movement takes place. Adjust the brakes carefully and take up the adjust-ment on all the control wires i the levers show any idle movement before commencing to move the particular part which they operate.

The Secret of Skill.

Attention to all these detail will have familiarised the ride with the state of every part o anything which is in the leas doubtful, he will be able to anticipate the cause of any in voluntary mechanical stoppag

almost as soon as it takes place It may truly be said of those moto cyclists who are so expert, and whos-diagnosis of roadside troubles is almos uncannily rapid; that the essence of their apparent skill is due to their realisation of the saying that "To be forewarned i to be forearmed." WHARFEDALE.

A SPORTING MONOCAR. A Single-seated Model of the T.B. Three-wheele IT has often been suggested that there is a sure market for a monocar built and finished in a first-class manner by firm who could market it effectively. So far, most such propositions have emanated from small firms, and their specifications, with one exception, have not been sufficiently good to make them a commercial success. The machine illustrated is an entirely different proposition. It is a "designed job," produced by a firm of engineers well equipped to make it in quantities. This firm is Thompson Bros. (Bilston), Ltd., who have for some time been experimenting with three-wheelers—the T.B. cycle car described in our issue for The sporting model T.B. monocar, The chassis January 8th being the leading model. Shaft drive, an 8 h.p. hir-cooled V details are the same as the T.B. runabout, a single-seater

The Latest Entrants in the Motor Cycle Field.

New Lightweights. Developments in Scooters. A Tandem Motor Cycle. A Miniature Tricycle. A Manxland Mount.

As was to be expected, the demand for motor vehicles of all types is inducting many small firms to introduce motor cycles. These almost invariably take the form of "assembled" lightweights, and the passenger field is left to those who produce most of the parts themselves. This is probably due to the fact that the production of engines of larger sizes is strictly limited, whereas the manufacturers of two-stroke units and the manufacturers of two-stroke units and small gear boxes are in greater evidence, and, owing to the simplicity of the two-stroke engine and the small gear box, fairly large quantities can be produced quickly.

Below we give particulars of some of the new propositions to which we have just referred.

THE WITALL LIGHT. WEIGHTS.

TWO two-stroke lightweights are being introduced by the Witall-Garage, 136b, Tanners Hill, Lewisham High Road, New Cross, London, S.E.8. They are similar in design, with the exception of the power units and petrol tank capaof the power units and petrol tank capa-cities. Model A is a sporting little machine, and employs a T.D.C. engine for the power unit, which, it will be remembered, has a bore and stroke of 70×70 mm. (269 c.c.).

The frame of the sporting model has a diagonal top tube, and the tank a capacity of one gallon of petrol and a quart of oil. The T.T. handle-bars no doubt of oil. The T.T. handle-bars no donor will tempt the younger class of enthusiast to a large degree. 26×2in. Dunlop tyres and Saxon spring forks are at present fitted, but it is possible that a different fork may be substituted at a later date. The Witall model B is a tourist machine with an Arden two-stroke as the nower unit. as the power unit.

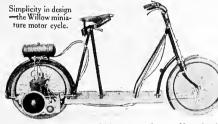

As in Model A, an Amac carburetter and C.A.V. magneto are fitted, the latter

and C.A.v. magneto are ntted, the latter being in front of the engine and driven by an enclosed roller chain.

The petrol tank has a capacity of one and a half gallons of spirit and over a quart of lubricant. Substantial and neat aluminium footboards and Roc two-speed gear boxes are fitted on both models. We are informed that delivery of both models can be made in approximately sixteen days.

THE WILLOW SCOOTER.

ALTHOUGH termed a motor scooter. the machine shown in the illustration would perhaps be better termed a miniature motor cycle employing the Wall Auto-wheel as a power unit. For a machine of this type the open frame has many advantages; the simplicity of its construction, which consists simply of

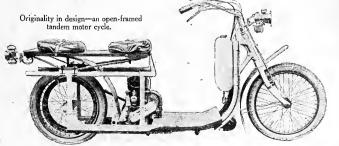

bolting the frame tubes which support the front and rear wheels to a stout ash footboard, renders it suitable for quantity

This construction gives greater flexi-bility than a metallic frame, and it is claimed that the rider's comfort is greatly enhanced thereby.

A single lever carburetter is fitted, and, moreover, the compression release device is operated from the throttle lever.

This machine is manufactured by the
Willow Autocycle Co., Willow Works,
Willow Street, Victoria, London, S.W.1

A NOVEL TANDEM.

THE Jackson motor cycle is the inven-tion of Mr. R. L. Jackson, who has been associated with the motor industry since 1896, and was one of the pioneers of the light car movement, Intended primarily for short journeys, it has an open frame, carrying the engine amidships inside the duplex tubes in such

a position that if the machine falls over the power unit is not damaged.

In the machine shown ' to ns the engine was a 23 h.p. Union two-stroke, driving directly to the back wheel by means of a belt. In future models, however, a two-speed gear and spring forks will be fitted. The petrol tank is carried in front of the driver.

Not the least interesting part of the machine is the method of springing the platform on which the two seat cushions are carried. This is mounted on laminated springs, and it is so constructed that two passengers can comfortably be carried, or,

passengers can comfortably be carried, or, if desired, the after cushion may be removed and a large box carrier fitted. The major part of the weight is below the centre of the wheels, which should tend to keep the machine steady and to reduce the chances of skidding. At present three-ply wood mudguards are

MOTOR (YCLE

The Latest Entrants in the Motor Cycle Field.

fitted, and another interesting feature is the tyres, which are 550×65 mm., as fitted to Baby Peugeot cars.

The machine is handled in London by Messrs. Gastons, Ltd., 212-214, Great Portland Street, London, W.1.

A MINIATURE MOTOR TRICYCLE.

A LITTLE three-wheeler, embodying clutch and hand starter, intended for light delivery, has been placed on the market by the Abbott Ford Motor Scooter and Engineering Co., Ltd., 5, Surbiton Road, Kingston, Surrey. The frame is constructed of strip steel,

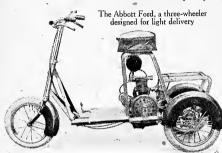

the longitudinal members terminating at the forward end in V shaped supports, which are welded to the steering head, laminated springs supporting the rear clutch, the clutch spring being located between the cone and a flange keyed to the axle. The clutch pedal, which is provided with a ratchet, is connected to the clutch ring by a rod and bell crank lever.

16in. × 23in. tyres and attractive domeshaped mudguards are fitted.

All the components of the scooter have been made as light as possible, resulting in a total weight of under 40 lb.

· During our brief trial of this machine, the engine unit seemed quite satisfactory. It would be advisable, however, either completely to enclose the transmission system or provide an undershield to protect it from the mud and dust. suggestion will, we understand, be carried out in future models. The springing of the rear wheel was good. The seat supporting members, however, are inclined to be weak, which permits considerable side sway when turning a corner. These members are also to be adequately improved.

Undoubtedly there is a potential demand for a light motor-driven vehicle for light de-livery which will give a service showing dea service showing de-cided advantages over the pedal carrier cycle, and which can be handled by a youth of average intelligence. To appeal to small shopkeepers, the price and the running costs must be kept low, and minia-tures such as the Abbott Ford appear to fill the bill.

A MANXLAND MOUNT.

UST as one associates Epsom Downs JUST as one associates Epsom Downs with racehorses, so does a motor cycle produced in the Isle of Man automatically become a T.T. mount. It is therefore, perhaps, not surprising that the new Aurora motor cycle, made by Aurora Motors, of Mona Terrace, Douglas, I.O.M., is a sporting little mount, which should make a strong appeal to the youth of Manxland. The engine is a 3 h.p. Dalm two-stroke, having double exhaust pipes to the silencer, two-speed gear, hand-controlled clutch, chain-cum-belt transmission, 26×24 in. tyres, D.R. handle-bars, E.I.C. magneto, and Amac carburetter. The price of the two-speed model is 75 gns., single-speed 65 gns.

ROADS IN THE MIDLANDS

'HE road information contained below has been compiled by the Birmingham office of the A.A. and M.U., and will be of great assistance to many motor cyclists during the coming holidays: Worcester - Malvern. - Tarmac laying from Powick to Worcester City boundary, duration three months. Roller working at Newlands Common. Widening operation Worcester City boundary to Malvern

Town boundary.

Worcester - Tewkesbury. — Bumpy between second and third milestones from

Worcester.

Birmingham - Worcester. — Bumpy Droitwich, Witton, and Rockhill, Broms-grove. Care should be taken in wet

weather half mile south of Rubery.
Birmingham-Bristol Old Road.—The
portion of the road known as Rosehill,
Rednal, should be avoided; it is used as a test hill for heavy lorries.

Birmingham-Walsall.—Road bad. Birmingham-Wolverh'pton.—Very bad. Birmingham-Wolverhampton (via Willenhall).-Road bad condition.

Wolverhampton - Stourbridge. — Very bumpy between Wolverhampton and Himley. Roller working between third and fourth milestones south of Wolver hampton, full width.

Wolverhampton-Stafford.—Bad between Gailey and Wolverhampton.

Tamworth-Lichfield.—Bumpy, particularly on approaches to both towns.
Erdington-Gailey (Chester Road.)—Chester Road crossing (Erdington) to

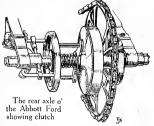

Gailey very bumpy.

Birmingham - Tamworth (via Tyburi and Minworth) .- Bad.

Northampton-Stony Stratford.—Tarma working between laying and roller

Wootton and Collingtree.

Shrewsbury-Ludlow. — Tarmac laying and roller working at Craven Arms, ful width. All clear day and night.

A 2½ h.p. two-stroke engine, having a bore and stroke of 77 mm. ×67 mm.,

and fitted with a Fellows magneto, is

held between the rear ends of the frame

members by two right angled plates.

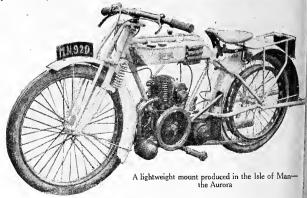

The tank, holding half a gallon of

petrol and oil mixed, is fixed immediately

below the seat, the supports of which are welded to the main frame members.

Attached to the seat support is a skeleton frame for the accommodation of a de-livery box. The drive from the engine

sprocket is taken by roller chain to a gear-reducing sprocket on a countershaft, from which the final drive is taken by chain to the rear axle. Located on the off side of the rear axle sprocket is an external contracting hand brake, operated from a pedal situated on the right of the footboard, and on the near side of the sprocket is a Ferodo-lined

Times to Light Lamps.

The T.T.

Three Blackburnes, at least, will be in this year's T.T., a team having been entered by Messrs. Burney and Blackburne.

A Dangerous Hill.

The Royal Antomobile Club informs us that White Hart Hill, about 1½ miles from Bristol, is under repair, and in a dangerous condition for motoring.

Motor Cycle Dumps.

W.D. open lorries, packed with warworn motor cycles, are to be seen daily on the Dover Road. Some are packed flat on each other; others are dumped in, front wheel foremost, or with the wheels upwards. It is said the machines are arriving via Richborough from the French dumps near Calais.

Graduates' Section of the I.A.E.

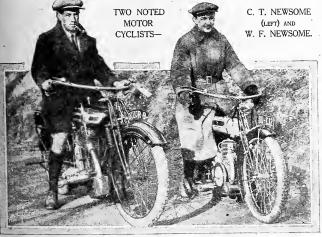

At a meeting of the London Branch of the Graduates' Section of the Institution of Automobile Engineers held recently at 28, Victoria Street. London, S.W.1, Mr. J. Chappell read a paper on "Magnetos." The author described in a very lucid manner the functions of the various parts of the magneto, and the characteristics of the different types. A very instructive and interesting contribution was added by Lt.-Col. Bristow.

Police Activity.

We are informed that the police are active at Epsom, working in the tenmile limit in High Street, also at Leatherhead on the Dorking Road, between the town and the church at the top of the first hill out, working both

ways.

Manchester motor cyclists are warned that a police trap is working daily between Hallowfield Station and the White Lion Hotel, Withington, from 5.30 to 9 p.m., and no fewer than ten riders were stopped within an hour on March 22nd for speed, obscured number plates, or insufficient lighting.

In pre-war days there was much confusion between C. T. Newsome, of the Rover Co., and W. F. Newsome, of the Triumph Co. Both were leading competition men who early joined H.M. Forces when the great call came. Now they are back with their respective firms, and were, oddly enough, encountered together by a *Motor Cycle* photographer.

Special Features.

RUNNING REPAIRS AND ADJUSTMENTS-ROAD TESTS OF NEW MODELS. NEW LIGHTWEIGHTS.

Western Enthusiasm.

Judging by the crowds at the start and finish of the Bath Club trial last week, the sporting side of the game is booming in that district. To run two twenty-four hours trials in a few weeks and to get an entry of about thirty each time at this unsympathetic season of the year is distinctly good.

Second-hand Prices.

There appears to be a further slight rise in second-hand prices with the advent of spring. This, however, seems to be confined principally to high-class outfits, while the single-geared lightweights and two-strokes are the same as last mouth, ranging from £30 to £60.

For prospective riders who find highclass variable-geared machines beyond their means, and who are content to ride entirely solo, there are quite a number of single-geared 54 h.p. to 4 h.p. mounts of good make available at this time for about £50, which, with a little care in selection, would give much enjoyment.

LIKE FATHER-LIKE SON.

The youngest entrant in the London-Land's End event, C. W. W. Cooper (the son of the well-known competition rider). Although only 14½ years of age, this young motor cyclist has much experience behind him, having ridden Harley-Davidsons, Triumphs, Douglases, and a Bradbury and sidecar. His mount on Saturday will be a 2¾ h.p. Douglas.

Easter Awheel.

This Easter promises to see a record number of motor cyclists on the roads, whether on touring bent or in competition. The two outstanding events arranged are the Northern meeting of motor cyclists at Richmond, Yorks., on Good Friday, and the M.C.C. London to Land's End run on Easter Saturday.

Obstructions on the Road.

Both The Motor Cycle and The Autocar have in the strongest possible manner urged that large and heavy road vehicles be fitted with means by which they may immediately be aware of following traffic.

At the recent Royal Antomobile Club General Committee meeting, two matters bearing on this subject were proposed. The Warwickshire County Council suggest making a byelaw, requiring that every locomotive and heavy motor car used on a highway in the county shall be provided with a mirror, fixed in such a position as will enable the driver to observe traffic approaching from the rear.

The proposal was warmly approved, and referred to the Commercial Motor Users' Association, with the recommendation that they would support it.

A Nisbet Award in the T.T.

Appreciation has been widely expressed at the decision of the Anto Cycle Union to award a special prize in future Tourist Trophy contests to the competitor displaying the greatest pluck and endurance in the race. This prize will be known as the "Nisbet" award, and will commemorate the late Mr. J. R. Nisbet, chairman of the Auto Cycle Union from 1914 to the time of his death last summer. The classic motor cycle road race, held annually in the Isle of Man, certainly provides scope for the exercise of the finest sporting instincts, and it is well that these should be recognised by a special prize given in memory of one who was an example of the best type of British sportsman. At the same time the A.C.U. has been wise to rule that any competitor who continues in the race while suffering from injuries will not qualify for the new award.

Annual Elections.

At the meeting of the Auto Cycle Union held in London last week, the Hon. Sir Arthur Stanley was unanimously re-elected president, and the following gentlemen were elected vice-presidents: Lt.-Col. A. E. Davidson, Rev. E. P. Greenhill, Mr.

H. P. E. Harding, Sir Capel Holden, Col F. Lindsay-Lloyd, Lt.-Col. D. F. Nicholl Col. M. O'Gorman, Sir Julian Orde, Mr G. F. Sharp, and Mr. A. W. Torkington At the subsequent annual meeting of Individual members the following gentleme were elected as representatives of individual members on the General Committee: Messrs.-S. L. Bailey, W. Cooper A. Ross, G. Smith, E. B. Ware, and W. H. Wells.

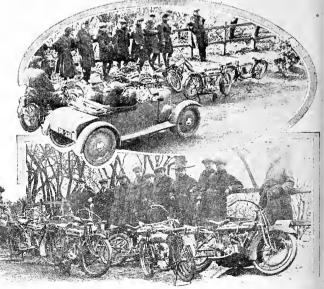

Identification Dates.

In order to protect purchasers of second-hand F.N. motor cycles, the London Concessionnaires F.N. (England) Ltd., have provided us with the number and dates of these popular Belgian machines since 1902. We are glad to give publicity to these figures, and hop British manufacturers will afford usimilar facilities to assist buyers of second-hand machines. The F.N. date and numbers are as follow:

An Inspection of the T.T. Course.

Satisfactory Condition of the Roads.

UITE recently we had the opportunity of making a complete circuit of the T.T. course, with the exception of the short cut in Ramsey to the Snacfell Road,

tion of the short cut in Ramsey to the Shacten Road, which is not yet open.

For the most part we found the roads in quite good condition and pleasantly free from the eternal potholes one encounters everywhere in England, the reason being of course, that no lorries are to be found on the Island to hammer the roads which, on the average, are superior to

Our trip had as a starting point the Quarter Bridge Hotel (a mile outside Donglas) from which place towards Union Mills the road is fair and under the steam roller

for half a mile.

From Union Mills to Crosby the surface is moderate, and remains so until the Ballacraine Hotel corner is reached, when the road up the rise improves considerably.

The surface through Glen Helen is excellent all the way.

and particularly beautiful at this time of the year, when the

Manx gorse is in full bloom.

Creg Willey has some rough stretches for the first 300 yards, but signs of repairs are observable by the roadside. From the crest of this hill, for the next four miles, the road is beautiful in more senses than one until the Kirkmichael corner is reached.

The village street is bumpy, but it is good past Bishop's Court for four miles, when the surface becomes bad and continues in this condition, becoming steadily worse all the way to Ramsey. The corner over the bridge before the Ginger Hall Hotel is wide and good, but possesses this distinctional contents.

tinction alone until the town is reached.

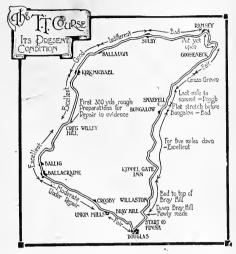

As the short cut to the mountain is not yet available, we made across the level crossing, narrowly escaping annihi-

lation by an incoming electric train.

Up the slope of Snaefell the wild mountain road is, for the most part, in fair condition, being especially good for the first three miles—the hairpin bend has been recently

repaired.

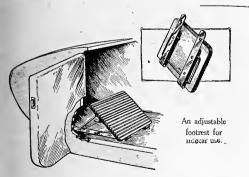

The road becomes more and more grass-grown as one approaches the summit (which, when we passed, was wreathed

in rain clouds), and is somewhat rough for the last mile or

in rain clouds), and is somewhat rough for the last finite or so until nearing the flat stretch before the Bungalow, where the crown of the road is dangerously humped in places. From this point down the mountain to the finishing post is probably the fastest stretch of the course, and for five miles the road is in excellent condition, as far as the corner of St. Nrian's Church, where the road is bad to the top of Brae Hill, which has been newly metalled from top to

The above observations will serve to show that the T.T. course is, with the exception of a few short stretches, in a safe and satisfactory condition for the forthcoming race, and it is evident that these rough places will be attended to by the Manx authorities before the course is opened for practice.

THE LATEST TAN-SAD SEAT.

S a substitute for spring frames and spring seat-pillars, the Tan-Sad Works have now introduced a new motor cyclist's seat. Briefly, it consists of a seat fixed on the ends of two quarter-elliptic springs which are secured to a frame suitable for locking to the carrier. The pivotal point, instead of being placed immediately in front of the rider, as is the case with the majority of saddles, is located as far as is possible behind him. This gives a maximum resilience. The attachment can be instantly

AN ADJUSTABLE FOOTREST FOR SIDECARS.

ECESSITY is a prolific mother of inventions, and no doubt the adjustable footrest for sidecars illustrated is the outcome of experience on the part of sidecar passengers. In the majority of cases, short people are required to use sidecar bodies more suitable for tall passengers, and rice versa, and in the former case a means of easily adjusting the "reach" will no doubt be very

much appreciated.

The device shown is manufactured by Messrs, W. Towell and Co., of Earlsdon, Coventry, and is sold at 21s. It consists of a five-ply wood platform on a hinged frame, which is secured to the sidecar floorboards, three positions being available—flat, and at two augles. It is perfectly rigid when in use, and occupies practically no space when in the down position, and should be specially suited to any sidecar having a roomy front portion.

fitted to carriers. The address of the makers is Freeman Street, Birmingham.

A Tan-Sad seat to replace the saddle of a motor cycle.

194 Competitors in this Year's Easter Long-distance Rur

T midnight to-morrow (Friday, April 2nd) nearly 200 motor cyclists and light car owners will be assembled at Cranford Bridge, Hounslow for the M.C.C. Easter run to Land's End. This M.C.C. Easter run to Land's End. This means, counting one person for every solo machine, two for each sidecar, and, assuming that the light cars will also carry one passenger only in addition to the driver, that about 300 persons will journey to the south-western end of England.

It is a big run-314 miles-with only two intervals of an hour each to break into the 20 m.p.h. schedule, and illustrates the keen enthusiasm of motor cyclists for long-distance runs sans a mass of irritating conditions when so many competitors are forthcoming.

The Jarrott Cup.

The premier award was presented to the M.C.C. by Mr. Chas. Jarrott, O.B.E., and is known as the Jarrott Cup. The run was first held in 1908, when twenty-five competitors journeyed westward, and was won by S. G. Frost (4½ twin Minerva), whose total error was 2m, 22s. Similary 31, whose total error was 2nd 22s. Triumph) secured the trophy in 1909 with a total time error of 2m. 22s.; as in the previous year's contest, twenty-five riders competed.

In 1910 there were thirty-five competitors, and the trophy was won by the late Sir R. K. Arbuthnot on a 3½ h.p. Triumph, his total time error being 2m. 9s. This was the first year the trial was held at Easter, August Bank Holiday being the date of the previous runs.

In 1911 a slightly more difficult route was planned, which included the crossing of Dartmoor. Sixty-nine competitors of Dartmoor. Sixty-nine competitors started, and the winner was the late A. J. Moorhouse (7 Indian). Time error, 2m. 32s.

No fewer than eighty-six motor cyclists entered for the 1912 event, the winner being Harold Karslake (3½ h.p. Rover), whose total time error was only 52s.; and in 1913, out of 110 competitors, P. W. Moffatt (2¾ Donglas) secured the cup. Time error, 1m. 37s.

One hundred and seventy-four competed in 1914—the last event—and the honour of securing the cup went to E. A. Colliver '(7 Indian), whose total time error was Ìт.

All the foregoing trials to Land's End have included the return journey, but this year a change has been made, the trial

being over the single journey only.

The route has been altered, and takes in Porlock and Lynton hills. The number competitors constitute a record, in which connection it is interesting to compare the entries in past London-Land's End trials:

1908		 25	1912		86
1909		 25	1913	۸.,	110

EASTER EVENTS.

Trials, Races, Runs, Meets, and Hill-climbs.

N addition to the M.C.C. London-Land's End run, starting to-morrow at midnight, there are several other Easter events of interest. These include:

Easter events of interest. These include:
The B.M.C.R.C. Race Meeting at
Brooklands, Easter Monday.
The Birmingham M.C.C. Trial to Barmonth, April 3rd.
Inter-club Meet of Northern Motor
Cyclists at Richmond, Yorks., April 2nd.
Westmorland M.C.C. Open Hill-climb, Easter Monday.

Staxton Hill-climb, near Scarborough,

Easter Monday. South Wales Inter-club Hill-climb, April 2nd.

Races and Rallies.

The programme of the British Motor Cycle Racing Club meeting, at Brooklands, includes eight events, the first of which commences at 2 p.m. The following are particulars of what should prove very interesting afternoon:

Event 1. 2 p.m.—Victory handicap for solo motor cycles of any class.

Event 2. 2.30 p.m.—The Essex Easter

short handicap for motor cars.
Event 3. 2.50 p.m.—Two-stroke sprint

Event 4. 3.10 p.m. -350 c.c. sprint

Event 5. 3.30 p.m.-500 c.c. sprint Event 6. 4 p.m.—The Essex Easter

long handicap, for motor cars. Event 7. 4.30 p.m.—1,000 c.c. sprint

Event 8. 4.50 p.m.—Three - wheeled handicap for three-wheeled runabouts and sidecars of any class.

The trial is now available for use by members of the B.M.C.R.C., the entrance fee to which is 10s. 6d, and annual subscription £2 2s. for the first 250 members only joining or rejoining the club as from January 1st, 1920.

Brooklands is near Weybridge, Surrey. To reach the track motor cyclists from London pass through Walton-on-Thames, those from the North can travel via Reading or Windsor, and from the south via Guildford.

Richmond, Yorks., where the northern clubs meet to-morrow, is in North Yorkthire, and lies in the centre of scenery typical of the Yorkshire dales. Those Yorkshire and Lancashire motor cyclists who are not attached to any of the clubs participating, and who are at a loss for an objective, may find a run to the meet worth while, as all rallies of machines are interesting, if only for the sake of seeing new models, which may not have been seen before.

The journey is too far, of course, for London riders, and even those in the Midlands will only consider it in connection with a week-end tour, but for those who do not know exactly were Richmond lies, it may be useful if we point out that it is about four and a half miles southwest of Scotch Corner on the Great North Road.

The Birmingham club's Easter event is a reliability trial for the Sangster the course includes the famous Bulchy-Groes, and the trial finishes at Bar-worth where where the course in the course includes the famous Bulchy-Groes, and the trial finishes at Barmouth, where no doubt most of the competitors will spend the Easter weekend.

Hill-climbs.

Orton Scar is the rendezvous of the competitors in the Westmorland M.C.C. open hill-climb. It is about thirteen miles from Kendal, Tebay being the names from Renar, Tenay being the nearest railway station. Sporting members of several well-known Northern clubs have notified their intention of competing, and, given good weather, an excellent competition should result.

Also, in the North, is the Staxton hillclimb—a classic of long standing. It has been organised by the Scarborough M. and M.C.C. for Easter Monday, and will no doubt attract many motor cyclists in that district.

Another important hill-climb is the joint club event organised by the Carmarthen, Neath, and Ystalvfera clubs. This will take place on Saturday, and as quite a large entry has been received, South Wales motor cyclists will no doubt make it an objective for their Easter Saturday run. Mr. J. J. Jenkins, Nelson Hotel, Carmarthen, has the arrangements in hand.

A Scottish Trial.

The Glasgow Western M.C.C. will hold a reliability trial on Easter Monday. The A. J. Stevens trophy will be awarded to the winner. Advantage will be taken in this trial to find the winner of the Palmer trophy, for which twenty-four competitors tied in the recent Glen Douglas-Rest and be Thankful trial held by the Western Club. The course on this occasion is laid Cinb. The course on this occasion is laid through the picturesque districts of Lanarkshire, and some well-known hills, including Monse Lane (Kirkfieldbank), Hartree, and Devil's Elbow, figure on the route. A new hill—at least, new to trials competitions—near Hazelbank is also included, and it is expected that the gradient will prove a pretty severe test even to the best machine.

The observed hills are Mouse Lane, Hartree (both ways), and Hazelbank. There is a non-stop section from Tweedsmuir to Innerleithen, where lunch will be served. There is also a non-stop section from Hazelbank to Glasgow. On Hartree, going out, there will be a fast hill-climb, and on the journey back a slow hill-climb. After the lunch stop an easy starting test

will be made.

Most clubs have events of their own for this Easter, and altogether, given fine weather, the roads of this country will be well frequented by riders of all possible types of two and three-wheeled motor cycles.

Burnley and District M.C.C.

It was decided at a general meeting to change the name from "Burnley Motor Gipsy Club" to "Burnley and District Motor Cycling Club."

Dorchester M.C. and L.C.C.

Much local interest was aroused on the occasion of the opening run to Bourne-mouth on March 18th. Despite un-favourable weather, about thirty members turned out, testifying to the keen spirit prevailing in the club.

North London M.C.C.

A slow hill climb in the neighbour-hood of Northaw has been fixed for April 3rd, and on Easter Monday the April ord, and on Easter Montagy are captain's run will take place. Members will meet at headquarters at 10.45 a.m. for both events. The club membership has now reached 55, including two lady members.

Cardiff M.C.C.

A trial run of forty-seven miles, over a difficult course, took place on March 20th. Competitors started at Kingsway, and followed a route through Ely, Llantrisant, to Upper Boat, where a wide detour was made, including Groesfaen, Nantgarw, returning to the starting

East Midland Centre Challenge Trophy.

A meeting of club representatives has now been fixed for April 10th, at the "Mallet and Tool," Chesterfield, at 3.30 p.m. The North Derbyshire Club is making arrangements for tea, and all visitors are invited. Any new clubs desirous of attending should communicate with Mr. J. Simmonds, 10, Cranmer Street, Nottingham.

Dublin and District M.C.C.

Silver medals were awarded to the following competitors, who took part in the lowing competitors, who took part in the trial on St. Patrick's Day, having lost no marks: A. Wayte (7.9 h.p. Harley-Davidson sc.), P. H. Hurse (4½ h.p. B.S.A.), C. W. Johnstone (3½ h.p. Sunbeam sc.), S. G. Smith (4 h.p. Norton sc.), H. McAllister (7.9 h.p. Indian sc.), D. Allen (2½ h.p. Sun), T. Redmond (7.9 h.p. Indian sc.), and B. Smith (4 h.p. Trimmel) Triumph).

Liverpool M.C.

A successful impromptn team trial was held on March 21st over a short sporting course near Llangollen. Each team consisted of three competitors, who had to complete the course three times. Quite a number of the old members are back again, and the attendance was good.

The result was a win for C team, comprising H. P. Richards (Harley sc.), A. Mosses (3½ Sunbeam), and J. C. Walker

(2! Edmund).

·Several short reliability trials are being organised for the Easter week-end, beginning from Friday, April 2nd. Full particulars will be posted up daily at the club's headquarters, the Commercial Hotel, Kendal. In addition to other prizes, the President's prize will be competed for during the week-end. Secretary: Mr. E. E. Holloway, 36, Sandown Lane, Wavertree, Liverpool.

new members were present, and the futu programme was decided upon. Rochester, Chatham and District M.C

Provided Brooklands Track is rea Provided Brooklands Track is rea in time for the opening race meeting Easter Bank Holiday, a run has be arranged, starting from Esplanade at a.m., to view the racing. Should i race meeting not materialise, arran ments are being made to attend a gij meeting, if one is being held within ereach. Failing these, an impromptu will be organised.

N.M.C.F.U. (Birmingham).

The opening run will take place Newtown Linford, near Leicester, the Easter week-end, starting from "Fox and Goose," Washwood Heath, 3 p.m. on April 3rd.

For those unable to take part in week-end event, a day run has barranged for Easter Monday to the abplace, starting from the "Fox a Goose" at 10 a.m.

North Wilts M.C. and L.C.C.

April 2nd is the date selected for opening rnn, starting from the Squ Corn Exchange, at 2.45 p.m., the stination being the "New Inn," Le lade, where members will be entertai to tea. The captain of the club is F. G. Attwood, 13, Park Terr Swindon, and the secretary, Mr. A. Norris, 26, Kent Road, Swindon. He quarters are at the "King's Arn Świndon.

Kidderminster M.C.C.

In ideal weather the opening run the place on March 20th, starting from a "Red Lion," Kidderminster, at '.0 p.m. The first real test was the wknown Flagstaff Hill, where several fail. and a certain amount of haulking a experienced. Good climbs were madey B. Janis (23 Viper), A. Weles (Roy), H. Perks (Levis), and F. Adam (7 Incasc.). The results were as follows: 1,3. Sc.), The results were as follows: 150 Janis (Viper); 2, W. A. Lawson (Noui sc.); 3, H. Perks (Levis). A further fall is arranged for April 3rd. Hon. sec., F. R. J. Prichard, Eastbourne Lore, Chester Road, Kidderminster.

Club News .-

Stourbridge M.C.C.

The club is now in full working order, and an attractive programme is being arranged for 1920. Particulars of the Easter run can be obtained from the secretary, 111, High Street, Stourbridge.

New Tredegar and District M.C.C.

A new club, with the above title, has A new club, with the above title, has lately been formed, and the following officers appointed: President, Mr. E. J. Draper, M.P.S.; vice-president, Mr. L. Lloyd; treasurer, Mr. P. Carozzi; hon. sec., Mr. M. Jones, Commercial Street, New Tredegar, with whom interested local motor eyelists should communicate.

Harrogate and District M.C.C.

A good programme has been arranged by the club for 1920, starting with a run to Richmond, which will include a speedjudging competition. The following offijudging competition. The following officials have been appointed: President, Mr. J. E. Brooke; vice-presidents, Mr. W. N. Fawcett, Mr. W. L. Rutland, Mr. W. Hill, and Mr. R. Spencer; captain, Mr. J. Baxter; and hon. secretary, Mr. H. W. Fortune, St. James's Chambers, Cambridge Rd., Harrogate.

MOTOR (YCLE

Purley and District M.C.C.

Saturday, the 17th inst., is the date selected for the opening run to Leith Hill Hotel, starting from Purley Corner at 3 p.m. All motor cyclists are invited, at 5 p.m. All motor cyclists are invited, and should send in their names to the hon, secretary, Mr. S. J. Tayler, 19, Clifton Road, Wallington, Surrey, not later than the previous Wednesday. Officers will be elected at a meeting to be held after tea.

Sunderland and District M.C.

A very successful hill-climb was recently carried out at Tunstall Hope. The weather was fine, and a large crowd of spectators were present. Much interest was displayed in the fine performance of Miss Holland, who made two complete ascents on a Skootamota, winning a gold

Medal.

Awards were given for least variation in time in two ascents: 1, F. Turvey (B.S.A.), §s., gold medal; 2, R. Hudson (P. and M.), E. Wade (Douglas), and P. Bell, §s., tied, bronze medals. Fastest time: F. Turvey (B.S.A.), 30s., gold medal.

Fastest passenger vehicle: R. Drewry (Harley sc.), 35½, gold medal; and slowest complete non-stop: Miss Holland (A.B.C. Skootamota), 2m. 34½s., gold medal.

Manchester M.C.

A large crowd of spectators watched the start of the initial run of the club on March 21st. The trial was a great

success, there being 100 competitors.

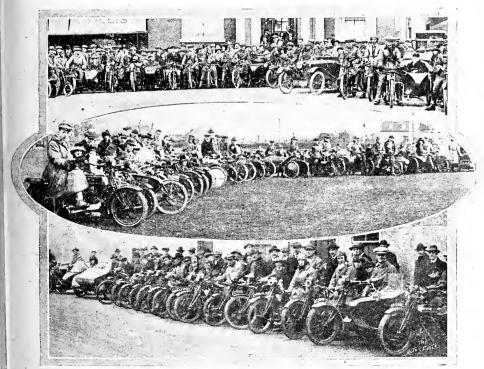

Three prizes were awarded, and the Three prizes were awarded, and the successful riders were: 1, H. Andrews, jun., total error 3m. 45s.; 2, H. Killick, total error 3m. 50s.; while Blakley and Chadderton tied for third place with a total error of 5m. 57s.

The hon, sec., Mr. W. H. Cottrell, 75, Broad Street, Pendleton, Manchester, would be glad to bear from the winners.

would be glad to hear from the winners.

The Northern M.C. (Newcastle).

About thirty riders started in the club's opening run to Rothbury on March 21st. The weather was fine, and the "Queen's Jlead," Rothbury, was reached about 12.15, where members had lumb of the remaining the started about the started was reached about the started with the starte lunch, after which a speed-judging test lunch, after which a speed-judging test was held on a hill near by. The best performance was put up by Mr. C. Travers (Henderson sc.). Bell (3 h.p. A.B.C., also made a fast ascent. Unfortunately, there was some difficulty in ascertaining the winners owing to one of the watches refusing to function. Members returned home after tea, and all enjoyed the day's outing.

CLUB ENTHUSIASM.

The crowds that assembled at the opening run of the Kidderminster M.C.C. (top), Bedford and District M.C.C. (centre), and the Hull Motor Cycle (bottom), augur well for the future of these "live" clubs. All classes of vehicles were represented, from the scooter to the four-wheeled cycle car.

The Editor does not hold himself responsible for the opinions of his correspondents.

All letters must be addressed to the Editor "The Motor Cycle," Hertford Street, Coventry, and must be accompanied by the writer's name and address. TAXATION.

Sir,-I hope you will use your power in every way possible to enforce a fuel tax as the main means of raising revenue. It is indeed the only fair way and one by which, generally speaking, the man whose vehicle does most road damage—i.e., in broad terms the user of the heaviest vehicle—pays more

towards the upkeep of the roads.
"Single and twin" refers to the varying petrol consumption of different types of engine, and anticipates in consequence unequal shares of the burden. But, sir, it would be a sheer impossibility to devise any scheme which did not appear unfair to some section of the motoring community; and the fact that the two-stroke engine is more extravagant than the four-stroke would perhaps prove a blessing in disguise by forcing the manufacturers to pay more attention to this point, and produce two-stroke engines considerably less rapacious than at present. ARTHUR GOUGH.

THE MACHINE FOR SPORT.

Sir,—I notice in your valuable paper of March 18th a letter from "Reg. A. Green," and I really do not know whether to take his letter as a joke or seriously. Being a rider of a T.T. Norton (B.R.S.) myself since 1915, I happen to know something of its capabilities, and very much doubt what "R.A.G." tells us as regards the three miles per hour. I quite agree with him when he says he can do sixty miles per hour; so can I, quite easily; and I also agree with him when he claims the T.T. Norton to be equal with the decimal the LT. Notion to be equal to a twin 5-6 h.p. machine. But when he talks about three miles per hour it makes me smile, as surely will other Norton T.T. owners. Anyway, I should like to hear, what other Norton T.T. riders have to say. I have no connection with Nortons, Ltd.

C. B. FRYER.

Sir,-With reference to Mr. Felix B. Sladden's letter re "Machine for Sport.

He says that to obtain acceleration from a high compression T.T. machine is a very fine art indeed. He has obviously neither seen, heard of, nor ridden any model Norton. If he had he would not make the assertions he

Again, Lt. T. H. Lewis stated that the all-belt drive on T.T. machines is an abomination in snow and wet weather. I ride my Norton in all weathers, and am afraid I do not by any means agree. In snow, perhaps, he is right. I live in the South, where snow is a luxury, but where it rains nine-tenths of the year! I should like to know what T.T. machines he has ridden. Since he has an idea that singles are not in the running for acceleration, I would ask him to try a T.T. Norton. He should tie a soft cushion on the carrier leads to be sheet believe to be it! a T.T. Norton. He should lest he is shot back on to it!

Chichester. MERELY AN ENTHUSIAST.

Sir,—I was exceedingly interested by "T.T.'s" letter in your issue of February 12th. I am all with him up to a point—the 500 c.c. single-cylinder being my ideal for solo work; also the rigid frame, T.T. handle bars, etc., but the single gear mount is a bit too "sporting" for my liking. Medium geared machines are my pet aversion, and I cannot stand starting a 3½ to 1 geared bus in traffic, so nothing remains for me but the variable gear machine.

Having a dislike for gear boxes, I do not consider them, and so we come to the variable pulley gear, and nothing is nicer. Its extra weight can be ignored, even on the lightest of lightweights, and if a free engine position is

incorporated, you are as comfortable as can be, even in the thickest of traffic. A gear for every grade, no chains to looked after or to help you to skid on a greasy day, and extra weight on the rear part of the machine.

My present machine is a 3½ h.p. Zenith-Gradua single and with its J.A.P. engine, once you master the oiling, is all that can be desired, ninety being the average m.p. thanks to a sensible top gear, and ready to pop along qui

as fast as I wish on these present-day roads.

I am hoping that Zenith Motors will start making the model again soon.

What do other readers think about the subject of variabulley gears?

C. B. NOTLAW. pulley gears?

THE T.T. AND TRADE.

sur,—as we understand the Tourist Trophy Races we held, although a few firms are declining to enter, whave definitely decided to compete in the Junior Race. No nuly does the sporting side of the event strongly appeal one, but we also feel it our duty to defend our title present holders of the Junior Trophy. In arriving at the decision we are not unmindful of the preparatory we already done by the A.C.U. and the Isle of Man authoritie and for this reason alone we consider the races should have Sir,-As we understand the Tourist Trophy Races w and for this reason alone we consider the races should ha all possible support from the trade, and so make the even

all possible support from the trade, and so make the success they have always been.

The difficulties brought about by the moulders' stril are ours also, but no effort will be spared on our part have the A.J.S. ready to compete on June 15th.

A. J. STEVENS AND CO. (1914), LTD.

GEO. STEVENS, Managing Director.

COMPETITIONS.

Sir,—You say, quite truly, that it is unsportsmanlike rail at the conditions of a trial or the decision of the judg after the trial has been held. Every competitor by enterior has agreed to abide by the conditions of the trial and accept the award of the judges. He has no ground of cor plaint, provided that the conditions have been observed. the other hand, there are one or two points in regard to which the competitor may have a grievance after the trial. In the first place, the organisers of the trial should prevent, as a sathey possibly can, the publication of unofficial "results." as they possibly can, the publication of unomcal "results. glaring instance of this was the telegram of a press agent in the case of the Paris-Nice, but the same thing is unknown in English trials. Secondly, they should not themselves publish incomplete or "provisional" result Few people take any notice of corrections. Lastly, results of the provisional that are sometimes awaited with much interest, out are three or four weeks the interest evaporates. Of course, I a quite aware of the difficulties. On the other hand, I remer her trials in which the results have been known the san night or early the next day. Elaborate formulæ and intrica calculations take time. They should be avoided.

Whilst I am grousing (I have never had the painful experence of having to make out results in a hurry), may I sugge that two old bogeys which one hoped were dead—the sp second and the secret check—seem to have revived. Bo are acknowledged to be quite useless as a test of the rid and his machine, and both go far to spoil his enjoyment whether he wins or loses. A cup won in this way shou not be considered an advertisement of somebody's mot but of somebody's stop watch. I wonder that no watchmak has seen his opportunity. I wonder that no watchmak H. GEORGE MORGAN.

GOOD SERVICE.

Sir,-I have noticed at various times in The Motor Cycle, of which I am a regular reader, letters from motor cyclists who have had occasion at some time or other to submit their machines to a firm, and have received satisfactory treatment at the hands of the firm.

I should be very much obliged if you would allow me to recount the treatment I received from a well-known firm

of magneto repairers.

Some few weeks ago the armature winding of my U.H. magneto gave ont, and I immediately took it to Messrs. Gumbrell and Co., of 43, 45, and 47, Derby Road, Lough-

The fault was located and the repairs effected in a very short time, and at an extremely reasonable cost to myself, and I, might add the repairs were extremely satisfactory, the magnete working far better than it had done previously. I wish to point out that I have no interest in this firm except as "A very satisfied customer."

ARTHUR DOMONEY.

PROMPT DELIVERY.

Sir,-Can any of your readers beat this for business-like treatment? A short time ago I wanted a certain make of two-stroke machine, rather scarce in the market at that time. I telephoned the agents, Messrs. Tilley, The Esplanade, Weymeuth. Nothing doing at the moment, but they expected one soon, and would ring me. Four days later they telephened to say they had a new 1920 model, just arrived, at list price. Would I have it? I said yes, and asked them to paint my numbers on the plates, adding I would call for it the next day. On calling, I found the machine with the plates properly painted, and enough oil and petrol for fifty miles. I paid for it, and was loaned a Skootamota to play with whilst my receipt was being made out. Judge my surprise on receiving my change to find no charge for painting plates, delivery, or the petrol and oil—just the list price of the machine; that was all. I was informed that this was the usual treatment given the purchaser of a new machine. How different from paying for the carriage of a machine from the werks, etc. Of course I purchased a well-known machine. I am a stranger to Messrs. Tilley. R. C. STONE.

PROVISIONAL PRICES.

Sir,-With reference to the letter by Mr. W. A. Pechey in your issue of March 18th, I notice that your correspondent has discovered the date 1914 on the fork of a 1919 machine, and consequently accuses the makers of pro-

I venture to suggest to Mr. Pechey that this represents the date of design rather than the date of manufacture. for example, last July I purchased a new machine from a irm who supplied many thousands of machines to the Army. Yet the forks of that machine bear the date 1914. Now, it is beyond my power to believe that, after the mmense quantity of machines turned out by that firm luring the war, it should still have a stock of parts manu-actured in 1914!

The design, of course, as everyone knows, is virtually he "1914 model"—a jolly good model, too!

I have no connection with any manufacturing firm.

C.McG. S. Norwood.

Sir,-May I be permitted to reply to Mr. W. A. Pechey e his suggestion that some firms are using pre-war material nd charging post-war prices?

This is really not such a reprehensible case of profiteering s it would appear at first sight. The firm in question is loing what is called following the market, and is probably naking a hig profit on these machines.

We now come to the other side of the picture. The firm s presumably now buying raw material at very inflated

rices. In the dim future, or perhaps sooner, and who is o say, raw material will drop in price.

The firm will again have to follow the market and bring heir prices down, although they are using material for hich they have paid a big price. Their goods may even have o be sold at a slight loss. The directors now take the big rofit which they have made in the first case and square hings up, the net result being that they have made a bit n the whole deal, but not too much.

This is the way nearly all manufacturers who have to buy raw material work, and that is why sensible firms often put by what would appear excessive sums into their reserves, instead of paying larger dividends.

I may add that I have unfortunately no connections with

any firm, and am replying to Mr. Pechey in order to show that the profiteering question is very complex, and I believe there is very much less of it than one would think from the outcry made about it.

F. W. M. VAUGHAN.

SPEED WOBBLE.

Sir,-I have followed with considerable interest the discussion on speedmen's wobble which has appeared in your columns during the past few months. As to the Rudge Multi being immune from this peculiar defect, as stated by Mr. Walter Hare, I should like to point out that this is water hare, I should like to point out that this is not the case; in fact, the letter which caused the discussion was written by the rider of a Rudge, who stated that he "was riding a brand new Rudge-Nulti, which I have never ridden before, down an incline at 65 m.p.h. when the machine commenced to wobble," and went on to say that he was precipitated in the dust, etc.!

It hink that one of the most probable causes is a "period" of engine vibration at high speeds. I do not say that this is the only cause, but I have not heard of a two-stroke wobbling, nor yet a Douglas.

With regard to the centre of gravity being placed too far forward or too far back, I may say that I know of a specific which we have the work of a specific work of the second o

machine which wobbles at all speeds when the weight is carried forward, but which does not wobble when a pillion passenger is carried, which contradicts the argument that the centre of gravity should be well forward. TECHNICAL. centre of gravity should be well forward.

Sir,-Having seen many letters in your valuable paper re the above, I think my painful experience may prove of interest to your numerous readers. I have just been out with the express intention of getting a wobble or knowing

with the express intention of getting a wobble or knowing the reason why. (Yes; I was successful, thank you!) The machine, a 3½ h.p. Rover, will not wobble on a smooth road at 65 m.p.h.; but on a moderately rough road the saddle first of all bounced up and down, then this gave place to a slight sideways motion, which was conveyed to the handle-bars via myself. (Exit me through hedge, myttering.)

Am I right in saying that the Reading Standard saddle springs have telescopic rods in the middle? If so, it might be interesting to hear if that machine ever wobbles. London, N. NEARLYDONEIN.

RETRIEVING THE ODD DROP OF PETROL. Petrol has reached an exorbitant price. We may expect to see motor cyclists armed with syringes for collecting spilt spirit in the near future.

One of the charms of the motor cycle is its ability to go anywhere—even down to the waters' edge, where al-fresco meals may be taken.

NORTH LONDON ROADS.

Sir,—May I, through your columns, warn those readers of The Motor Cycle who anticipate using the main roads to the North-west during the coming holiday carefully to avoid the Edgware Road between Cricklewood and Edgware. Between these two points the road is composed of mnddy gravel, with a wood block centre upon which, after rain, the tramlines float as on a raft!

It is practically impossible for a solo machine to negotiate this stretch of road after dark, unless its rider is thoroughly acquainted with the few places where the lines may be crossed with a minimum of danger. I should mention that in places, particularly in the region of the "Welsh Harp," the road has sunk so considerably that the trans enjoy (yes, they do!) a permanent (?) way quite six inches higher than the read! than the road!

To finish, I walked from Cricklewood to Hendon a few days ago, and in the space of one mile picked up the following articles from the road: One car crank case inspection plate, one leather drive for car lighting dynamo, and one bent Douglas footrest, from which you may draw your own conclusions. Perhaps had I continued further I could have obtained sufficient parts to assemble a complete 'bus.

STANLEY J. BAND.

DETECTING AIR LEAKS. Sir,-I note that "Ixion" is bewailing the fact that he does not know of a reliable method of detecting air leaks in the induction system. There is one method which I have used for many years, and which I thought was fairly widely known. The modus operandi is as follows: Revolve the pulley or back wheel till the piston is at the top of the compression stroke. Open the compression tap. Open the throttle and air slides of the carburetter to the full extent, and insert a cork into the induction pipe-so as to make an airtight fit. (If you want to test the carburetter also, leave the cork out and close the air and throttle slides fully.) Take a freshly lighted cigarette (one that is perfectly dry at the end is necessary. Do not use one that has been well licked or the engine will not "draw" properly) and press the unlighted end gently but firmly into the cup of the compression tap.

Revolve the engine gently backwards (all valves are closed). The cigarette should thus be stimulated to a fierce rate of burning, and one knows that the engine is drawing well. When the bottom of the stroke is reached, remove the When the bottom of the stroke is reached, remove the cigarette, and close the compression tap. Now revolve the engine gently, still barkwards. The inlet valve is now open and the piston ascending. It is wonderful the number of places the smoke issues from, in most cases. I have never failed to make an engine run slowly without missing after using this method, provided everything else is in order. The elimination of air leaks is about the most important of all things in inducing a big twin to be docile. Once the induction system is advited to any good carburetter.

Once the induction system is airtight any good carburetter

will give really slow running, and it is not necessary to he an umpteen-jet carburetter. The carburetter I have no and which has been in use on several machines, is a If B. and B. variable jet, which gives me an average of m.p.g. riding solo on a 6 h.p. twin on long rides throughly districts. I have tried many carburetters, but I he never found one to beat it for slow running, flexibility, a power.

GRADUATE power. High Wycombe.

Sir,-In your issue of March 11th "Ixion" enquires for method of detecting air leaks in the induction system. think you will find the following usually avails:

Put a little engine oil on the suspected spot, then op the throttle and turn the engine till the piston is at the bottom of the inlet stroke. The cylinder is now full of Close the throttle and give the engine a sharp turn in reverse direction. The inlet valve will, of course, open, a the resulting compression in the induction system will car bubbles of air to exude at any faulty joint and betray leal A little vaseline smeared on the slides of the carburetter whelp to increase the compression.

C. MACHEN. help to increase the compression.

GOOD SERVICE.

Sir,-I recently had some slight trouble with an E.I. magneto on a new Douglas combination. I wrote the firm brand new magneto, and a letter, stating that if I won send the faulty one to them they would pass me a cree note for the account enclosed. I sent no money, and dureceived the credit note.

LEO. E. POOLE.

BOOKS AND MAPS FOR MOTOR CYCLISTS.

Issued in conjunction with The Motor Cycle.

MOTOR CYCLES AND HOW TO MANAGE Price By THEM." The standard bandbook on the motor cycle; its care and management. It deals with every part of the machine, and with all types of machines, 266 pages, 400 illustratious. Twentieth edition 2/6 2/10

"HINTS AND TIPS FOR MOTOR CYCLISTS."
Containing over 400 useful "wrinkles" and helpful
hints in regard to motor cycles. Seventh Edition
Just published. ...

Edition

THE MOTOR CYCLE." ROAD MAPS

England and Wales, Scotland. London (showing roads into and out of London and avoiding London), Mounted on linen. Set of three, complete in case.

Obtainable by post (remittance with order) from ILIFFE & SONS Ltd 20, Tudor Street, London, E.C.4, or of leading Booksellers and Railway Bookstalls.

A selection of questions of general interest received from readers and our replies thereto. All questions should be addressed to the Editor, "The Motor Cycle," 20, Tudor Street, London, E.C.4, and whether intended for publication or not must be accompanied by a stamped addressed envelope for reply. Correspondents are urged to write clearly, and no none side of the paper only, numbering each query separately, and keeping a copy for ease of reference. Letters containing legal questions should be marked "Legal" in the left-hand corner of envelope, and should be kept distinct from questions bearing on technical subjects.

Lack of Power.

I have a 1914 2\(^3\) h.p. twospeed Singer motor cycle, on
which I can only attain seventeen miles per hour. When
riding all out the engine gives
a nice healthy note, and gives one the
impression of travelling at about 30
m.p.h. The timing appears correct,
the petrol pipe is clear, and the oiling
system is in good working order; moreover, the compression is good. The belt
when pressed down in the middle gives
about 2in. The carburcter is an Amac,
and the jet in use is No. 28. I have
tried Nos. 23, 25, and 26, but they
make no difference. The petrol feed is
at the top of the carburcter. Please say
what is wrong, and would a difference?—
W.H.

Without actually seeing the machine, it is very difficult for us to say what is the natter with it. We are inclined to hink that the belt is rather on the slack ide, and the trouble may be largely due o belt slip. The petrol level may be a rifle too high. The existing carburetter hould be satisfactory.

Four-cylinder V Engines.

(1.) If two 50° twin engines were coupled together with crank pins set at 180° should I get the same even torque and even firing intervals as a four-cylinder line ahead engine? (2.) Would it be necessary to use two magnetos, or could one magneto and a distributer be used? (3.) If the answer to No. I question is yes, if the cylinder were set at any other angle would it make any difference?—H.N.B.

.) Even torque cannot be obtained by yarrangement of two standard V twin gimes coupled together. (2.) It would a cheaper to use two magnetos, as a ecially designed model, with suitable stributer, would have to be made. (5.) sing Jour cylinders, it is necessary to opt the line-ahead system for even ing, the cranks being set at 180°, or the linders might be horizontally opposed the cranks at 180°. No arrangement two coupled V type engines could be vised to give even firing if the connect; rods of each engine work on a common mk pin. '

A Hub Gear Trouble.

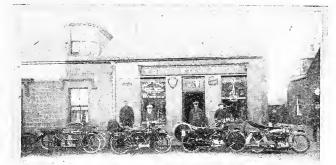

My 3½ h.p. motor cycle is fitted with a three-speed gear. The clutch and gears are perfect, also the adjustment, but when changing from second into top gear there is a whirring noise in the hub, and the gear does not engage until the machine is practically stopped. All the other changes are instantaneous. Perhaps you will suggest a remedy.—G.L.P.

If the adjustment of the hub is correct, as you state, it is evident that the slow engagement of the second gear is due to wear of some part in the hub itself. Probably the extremities of the teeth on the sliding sun pinion are damaged, and it will be necessary to dismantle the hub in order to ascertain if this is correct Before doing this, however, you might endeavour to screw up the adjustment a little more, although this should not be done at the expense of missing the correct neutral position, at which the back wheel should revolve quite freely while the belt drum is stationary. A slight grating noise may be disregarded, but not so pronounced grinding sounds.

Lubrication of Two-Stroke.

I have recently had my Villiers two-stroke engine overhauled, and have had a new Amac carburetter fitted. My motor cycle is fitted with a Best and Lloyd sight-feed lubricator, and the oil used to enter the engine through a hole drilled in the side of the carburetter immediately above the jet. With the new carburetter this will not be possible, as a gauze air filter surrounds the only position possible for drilling a hole to fit a union. Apart from this, the idea scems to me to be crude. Can you suggest a position on the engine where I could drill a hole and fit a union to connect with the oil-feed and obtain most satisfactory lubrication? I do not want to revert to any "petroil" system.—P.H.C.

The latest type of Villiers engine is fitted with a special engine bolt which incorporates the oil pipe union. You should write to the makers, and ask them if this bolt can be used to replace the existing top front engine bolt which passes through the engine bearer plates on your machine.

The ever extending scope and popularity of the motor cycle is best illustrated in small out-of-the-way towns where one might expect to find the sale of motor cycles achieved by catalogue and enamelled signs. The photograph depicts the dcpôt of Mr. W. Dickie, of Turriff, a Scotch town of approximately 2,340 inhabitants, and shows some of the new machines in his stock a few weeks ago. Among the machines in the group are a Bat, three Sunbeams, B.S.A., and several Douglas mounts, from which it will be gathered that motor cyclists in Turriff are discriminating in their choice.

Type of Sparking Plug.

My machine is a 23 h.p. A.J.S., with a hot high compression engine and special cams built for speed work. What is the best plug to use?—L.A.H.

Several plugs are specially made suitable for hot high compression engines. We would suggest the mica single point pattern made by the leading makers.

Reliability of Electric Lighting.

I have a 5-6 h.p. Clyno and sidear, chain drive. I am thinking of fitting it with a dynamo and accumulators for electric light. Do you think the conversion will be satisfactory?— W.A.J.

The modern dynamo lighting systems which are on the market are quite reliable, and will, in most instances, ontlast the machine to which they are fitted.

RECOMMENDED ROUTES.

HUCKNALL TO MANCHESTER.-E.G. Hucknall, Chesterfield, Baslow, Stony Middleton, Tideswell Road, straight on to Chapel-en-le-Frith, Glossop, Mottram, Hyde, Denton, Manchester.

KIRKBY (NOTTS) TO NEWMARKET .- A. H. Kirkby, Blidworth, Farusfield, Eding-ley, Southwell, Newark, Grantham, Stan-ford, Wansford, Stilton, Huntingdon, Godmanchester, Cambridge, Newmarket. Approximately 95 miles.

LONDON TO WORCESTER.—A.W.F.R.
London, Brentford, Honnslow, West
Drayton, Slongh, Maidenbead, Henley,
Benson, Dorchester, Oxford, Woodstock,
Chipping Norton, Moreton-in-the-Marsh,
Bourton-on-the-Hill, Broadway, Evesham,

Wyre Piddle, Worcester.

BIRMINGHAM TO LLANDUDNO.—S.L.
Birmingham, Sutton Coldfield, on to Byramiguam, Sutton Coloneia, on to Watling Street, which follow through Weston, Crackley Bank, Shrewsbury, Ellesmere, Wrexham, Mold, Trefnant, St. Asaph, Rhuddlan, Abergele, Colwyn Bay, Llandudno. Approximately 130

HECKNALL TO GLASGOW.—E.G. Hacknall, Clowne, Whitwell, Work-sop, Tickhill, Doncaster, Ferrybridge, Brotherton, Micklefield, Aberford, Bramham, Collingham, Harewood, Arthington, Otley, Ilkley, Skipton, Settle, Clapham, Kirkby Lonsdalc, Kendal, Shap, Pen-rith, Carlisle, Longtown, Lockerbie, Beattock, Abington, Hamilton, Glasgow.
(A break of the journey at Ilkley is recommended)

TRURO TO SAXMUNDHAM .- W.A.P.H.

Truro, Tresillian, Ladock, St. Dennis, Goss Moor, Lanivet, Bodmin, Liskeard, Callington, Gunnislake, Tavistock, Two Bridges, Moretonhampstead, Exeter, Honiton, Ilminster, Ilchester, Wincan-Honton, Immuster, Helicster, Wincanton, Hindon, Amesbury, Andover, Basingstoke, Hook, Hartley Row, Bagshot, Staines, Uxbridge, Rickmansworth, Watford, St. Albans, Hatfield, Hertford, Bisbop's Stortford, Great Danmow, Braintree, Celchester, Ipswich, Woodbridge, Saxmundham

Welding Facilities.

Special licences are being granted by Messrs. Barimar, Ltd., to selected engineers and garage proprietors to operate their new process of welding.

A Retirement.

An interesting ceremony took place re-cently at the offices of the Triumph Cycle Co., Ltd., the occasion being a presentation to Mr. R. A. Rotherham, by the directors, on his retirement from the secretaryship of the company. The new secretary is Mr. Arthur Wright.

Catalogues Received.

We are in receipt of a beautifully got-up and copiously illustrated publication from Messrs. Phelon and Moore, showing the original design of the P. and M. in 1900, and giving the fullest particulars of the latest model.

A New Address.

The Klaxon Co., Ltd., in conjunction with their sister company, the O.S. Speedometer Co., Ltd., have moved into new premises at 38, Blandford Street, Marylebone, London, W.L. Their works remain at Landor Street, Birmingham.

The Beldam Tyre Co., Ltd.

We are informed that the Beldam Tyre Co., Ltd., of Windmill Road, Brentford, Middlesex, have appointed the Universal Export Co., Ltd., 43a, Rathbone Place, London, W.1, their sole agents for British East Africa.

A.B.C. Motors (1920), Ltd.

This concern has recently made an sue of 250,000 10% - participating cumulative preference shares of £1 each. These shares, after a payment of 10% on the ordinary shares, are entitled to one-third of the balance of any surplus profit which it shall be determined to distribute in any one year. The company acquires the business and undertaking of A.B.C. Motors, Ltd., of Walton-on-Thames.

Review.

"Planes and Personalities: a Pot Popriti" Capt. A. Cunningham Reid, D.F.C.; Philip Allan, Quality Court, Chancery Lane, London, W.C. A very charming little book written by a distinguished flying officer who loved his work and loved his corps, if the R.A.F. can now be called a corps.

It starts with an introduction by that It starts with an introduction by that distinguished airman, Lt.-Col. W. A. Bishop, V.C., D.S.O., M.C., who begins by saying, "Capt. Cunningham Reid in this book gives the public something which has been badly needed for some time." In Col. Bishop's words, "the author describes fully the complete work of our Air Force, and with a rare touch of humour gives a general outline of his of humour gives a general outline of his own career step by step through the many different jobs to which a pilot in the

R.A.F. had to turn his hand. Some of these brought him in close contact wit the Prince of Wales and Prince Albert and he describes their activities in the air for the first time, and gives a new and charming insight of the two splending the s characters.

One of his most interesting stories wa in connection with ground straffin appropos of which he says, "The on satisfaction you can derive from the work was to discover a moving body of troops and actually to see the result of troops and actually to see the result. It is the middle of them, or, as once happened to one of our pilots, chasing an einem motor cyclist despatch rider. Pan stricken, the Hun soon got up a transdomer speed, the while keeping his ey more behind than in front, with the control of the contro more behind than in front, with it result that he suddenly came to a wa straight in front of him, the robranching left and right, and the la our man saw of him he was literall diving through a door in the wal motor bike and all, just like the hot trick at a country circus."

The glossary at the end of the box is also worth investigation many its also worth investigation.

is also worth investigation, many the definitions being delightful. "gadget," we learn, "is any sort contrivance the name of which y cannot for the moment recollect," which it is interesting to note that the ter "conked" has been borrowed by the ai men from the motor cyclist's glossar Readers of the book will find much interest and amuse them.

Reliable Plugs.

It is interesting that both Kaye Do who obtained the highest marks in the Paris-Nice Trial, and Eric Williams, the winner of the Colmore Cup, used Apol

Speedometers in the Paris-Nice.

We are informed that the winning Scott-team in the Paris-Nice Trial d scott team in the Panis-Nice I and untropy to the convey speedometers, as previously stated. We understand that Y L. Guy used a Jones, while both C, and H. O. Wood used Bonniksen instruction. ments. 'Premier'' Motor Policy Enterprise:

A fully equipped breakdown lorry; now garaged at the Highfield Garag Golder's Green Road, and is at the posal of policy holders in the event of accident within a twenty-mile radi 788.

A Newcastle Sale.

On behalf of the Disposals Boar Messrs. Cooper, Ltd., of Newcast recently sold a number of P. and motor cycles at prices ranging from £ to £60. We understand that, althou incomplete and of somewhat dilapidat appearance, the engines were in eve case practically new and in good or dition.

Ariel Reliability.

Mr. L. Newey, on a 6-7 h.p. An sidecar outfit, made the second best p formance in the Colmore Cup Trial, c of 111 entries. He also made the berformance in the sidecar class machines over 750 c.c. Five Ariels we entered. All made non-stop runs a scenered wards and also tears with secured awards, and also team prize.

MISCELLANEOUS ADVERTISEMENTS.

PRICES.

IDVERTISEMENTS in these columns irst 12 words 3/-, and 3d. for every adonat word. Paragraphs of under 8 words charged double rate. Each paragraph is reged separately. Name and address must counted. Series discounts, conditions, and that terms to regular trade advertisers will ueted on application.

ostal Orders and Cheques sent in payment for ertisements should be made payable & Co. LIFFE & SONS Ltd., and crossed & Co. isury Notes, being untraceable if lost in

sit, should not be sent as remittances. I advertisements in this section should be mpanied with remittance, and be addressed to offices of "The Motor Cycle," 20, Tudor et, London, E.C.4, or 19, Hertford Street, intry. To ensure insertion letters should asted in time to reach the offices of "The r Cycle," by the first post on Friday ning previous to the day of issue.

l letters relating to advertisements should a the number which is printed at the end of advertisement, and the date of the issue

hich it appeared.

te proprietors are not responsible for clerical rinters' errors, although every care is taken roid mistakes.

NUMBERED ADDRESSES.

the convenience of advertisers, letters may be advertisered. The sum of 6d, to delray the cost of action and to cover postage on replies must be added a alvertisement charge, which must include the Box coo. cfo "The Motor Cycle." Only the number spars in the advertisement. All replies should be set No. coo. cfo "Aistor Cycle." 201, Tudor Street, Replies to Box Number advertisements containing was shoulded to make use of the Deposit System. It is care of motor cycles offered for sale under a box r, as it is unusual for these to be sold without first appeted by the intending purchaser, advertisers will be business by embodying in their advertisements mention of the district in which the machine may be seen and tried. may be seen and tried.

DEPOSIT SYSTEM.

par DEPOSIT SYSTEM, naw who heals to send money to unknown persons all in perfect safety by availing themselves of our, the system. If the money be deposited with "The Cycle," both parties are advised of this receipt, time allowed for a decision after receipt of the sthree days, and if a sale is effected we remit the to the seller, but, if not, we return the amount depositor, and each party to the transaction pays a one way. For all transactions up to fio, a fee of 1/ is charged; on transactions word fato of \$5,0 the fee is \$16\tau\$, over \$5,0 the feet \$5,0 the feet \$5,0 the feet \$1.00 the posit System. Other advertisers may be equally s, but have not advised us to that effect.

SPECIAL NOTE.

litr: who reply to advertisements and receive no as to their enquiries are requested to recard the on a ran indication that the goods cevertised have the ben disposed of. Advertisers often receive so assumptions that it is quite impossible to reply to the by post.

THE FIRM FOR QUICK DELIVERY.

AUTHORISED AGENTS FOR DOUGLAS LEVIS ZENITH **MATCHLESS**

G.L. V.H.L. Sidecars

 $W_{\rm S}$ shall be pleased to receive enquiries for the new "V.H.L." Sidecar (registered, design), which is now on view at our Showrooms. This Sidecar is constructed of best quality 3-ply wood, it beautifully insubed, and luxuriously upholsered. It is, without doubt, one of the most confloctable and smartest Sidecars ever designed.

Price £20

We are now able to quote definite delivery dates for the famous 6 hp. "6.L." Combination, fitted with latest type overhead valve MA.G. engine, detachable wheels, spare wheel and tyre, internal expanding rear brake, external contracting transmission brake, and many other attractive and up-to-date features. Only one of these machines was entered in the 1919 A.C.U. Six Days Trial, and was awarded the silver medal and special mention in the judge's report. If you are interested, call and see a "6.L." Combination at our Showrooms. Price, 210 guineas, including D.A. Outfit, Klaxon Horn, Spare Wheel, and Tyre, etc.

Are Motor Cycles to be Taxed Off the Road?

E understand that the Committee appointed by the Ministry of Transport is on the eve of submitting its report, and that, in spite of all argument to the contrary, it will propose that motor cycles under 200 lb. in weight shall bear a tax of 30s., and over 200 lb. one of ± 3 . Also it is recommended that a tax of ± 4 shall be imposed on a motor cycle with sidecar. The Committee recommends that the present system of annual licences should be abandoned in favour of quarterly, halfyearly, and yearly licences-a point urged by The Autocar and The Motor Cycle—at the option of the user, which option will afford some measure of relief by enabling motor users to escape taxation during the bad weather season. It is also suggested that the tax of sixpence per gallon on petrol should be abolished, and that this will prove to be a mitigation of the higher scale of licences, and in some quarters it has even been argued that the removal of the petrol tax will so level up matters that motor cyclists will not pay any more than at present.

Our opinion of the new taxation has already been stated, and is well known to our readers. The remarks about mitigation can be taken as so much rhetoric. Either it is proposed to obtain greater revenue from motor cycles, or it is not. If it is, why talk about mitigation, and suggest that the removal of the petrol tax will balance the increased payment? If it is not, why alter the existing state of affairs?

Abolish the Rebates!

Presumably it is desired to get rid of the petrol tax on account of the difficulty and expense, not so much of its collection as of returning the tax, or a part of it, to those who are excused payment. The obvious remedy is to make all pay alike, and collect the tax at its fountain head. We entirely fail to see the sense of fairness in a man who would

tax a scooter at 30s, and a horse and trap at 15s. in spite of the relative damage to

A Concrete Example.

Referring again to the removal of the petrol tax, let us consider how this (with the proposed higher taxes) will affect the driver of a sidecar machine capable of 60 m.p.g. The difference in the tax is \pounds_3 . This is the amount payable on 120 gallons of petrol, which, at 60 m.p.g., will take the driver 7,200 miles. The long distance man will, therefore, not be adversely affected. This means that the man of leisure, the man who can afford to pay, will not have his tax increased. But what of the majority of motor cyclists? Motor cyclists, as a class, are not men of means and men of leisure, but an industrial class who have to work hard for their living, and their riding time is largely confined to the week-ends and public holidays, when they take the welcome opportunity of getting some fresh country air into their lungs to invigorate them for the work of the following week, often taking their wives and families with them on these little excursions. Such men do not average a half of the 7,200 miles which would even up their tax, possibly they do not get out on more than half the week-ends in the year, and average something about 100 miles per week-end-or a total of 2,500 miles for the year, and their tax amounts to £4 instead of £2 1s. This can hardly be called mitigation.

We hold that the principle of taxation should be to place the highest taxes upon those who can best afford it. In this case the opposite principle seems to be applied, and many a hardworking man will be compelled by harsh taxation to give up his health-giving motor cycle.) Again the man who can get all his riding into one quarter of the year will pay, presumably, one quarter the tax of the man who covers the same distance but spreads his riding over the whole twelve months. Does he do only one quarter the

damage? We pause for a reply,

A Boom Amongst Artisans.

S I anticipated when the wages of a scavenger began to surpass those of a head draughtsman, the agencies are experiencing a very keen demand from artisan buyers. I rejoice that it is so. Motor cycles for the million are an integral part of an England fit for heroes to live in, and will make for more happiness than taking over a small holding with a small capital and a sublime ignorance of agriculture. It is interesting to note that the artisan novice is concentrating on one type of machine, and with comparatively few exceptions on half a dozen makes of that type. He will have next to nothing to do with anything but the three-speeded single-cylinder tourist machine of 500-600 c.c., and he is a shrewd judge of the best values in that line.

Easing the Spinal Column.

CORRESPONDENT rightly urges that when we walk the flexion of our legs protects our spinal column from shocks. After suffering from backache in, and after, long motor cycling trips, he altered the riding position so as to shift a good deal of weight on to his arms, and he proclaims this as the best remedy. When a machine is delivered, the rider will usually suffer from either backache or wristache or both after a very long run, and he is a lucky man who can adjust the riding position to eliminate both forms of pain. A weakly or elderly rider will find that there are two cures for these aches, and only two. One is to buy a good spring frame; the other is to use a super-saddle in conjunction with big tyres, inflated on the soft side. The latter expedient is just about as good as a spring frame. Neither the hams nor the wrists can be expected to sustain high-speed shocks for ten hours in a day without complaining, since neither portion of our anatomy was designed to cushion innumerable bumps.

Air v. Water.

THERE are two narrow limits in water-cooling. Water freezes at 32° F., and boils at 212° F. The former limit is not important in England, though I have to drain the radiator and jackets of my Scott on some sixty nights during a typical Midland winter. The higher limit is a nuisance in England, and a still greater nuisance in the tropics. Prior to 1914 most small British cars steamed freely on hills of the Sunrising calibre. The cooling limits with aircooling are much wider. At the lower end of the scale there is no limit at all. The engine can be started and run in Arctic temperatures, and needs no protection in storage. At the higher end of the scale the limit varies with the design of each engine. A first-class air-cooled engine of modern design will produce its full efficiency at 500° F., and probably at

600° F. A second-rate engine will distort at a lo temperature, varying according to the seriousness of distortions. But if the design is so good that cooling limit is principally determined by the temp ture at which the oil can continue to lubricate, an cooled engine is 250% better cooled than a war cooled engine.

Two-stroke v. Four-stroke.

T would be great fun if some club would orga a comparative test of baby two and four-st machines during the ensuing summer. I wand round Olympia with the idea of selecting a machine for my 1920 pottering jaunts. I am not whole-hearted convert to the scooter, and I hesit long between such handsome wee four-strokes as Omega—there was a very jolly little fellow finishered and black with disc wheels—and those jie which I conceived to be the pick of the baby stroke basket. For quite extraneous reasons I fi placed my order for a two-stroke; but when t extraneous motives have evaporated, I shall cert have a go at an Omega, or something like it. some enterprising club pit a team of, say, ten four-strokes against ten baby two-strokes during ensuing summer, and draw up a comparative tab their respective merits? Of course, the two hun miles which they could cover in a day is not an cient distance to be conclusive, but the trial w arouse interest, and, given a representative entry o little ans, the A.C.U. might carry on the good in its next Six Days.

Roughing it Daily.

TE have had some very patchy weather la including a good deal of east wind, and very cold storms. I go out practically day, sometimes for long distances; and each w makes me realise afresh that the motor cycle is most exposed vehicle extant. In a car one is absol screened. In an aeroplane you are housed in a cock-pit, and can use electric heating if you war In a trap you can bury yourself under a pile of . On foot you can keep warm by increasing the The two least comfortable vehicles at this time of are the push-bicycle and the motor cycle. On former you cannot wear a lot of clothes without ge moist and sticky beneath them. On the latter extraordinarily difficult to keep dry and warm. the motor cycle develops its utilitarian aspects, its yearn more and more for winter comfort. I some fancy that the only solution is the cycle car-a ve on Morgan or Tamplin lines; and I sometimes that the trade will yet evolve a two-wheeler of lines once sketched by Mr. A. V. Roe. One this certain-I shall not rely on a two-wheeler of

ccasional Comments.-

resent type for many more winters. It will become question of using a better protected 'bus for the evere months, or of ringing the changes on cycle and yele car according to the weather. The latter solution, ntailing the keeping of two separate mounts, is apt 5 prove expensive.

Handle-bar Finish.

T is a mistake to suppose that all the commercial "black finishés" for handle-bars and suchlike bars are preferable to nickel plating. I have machine in my garage at present with a black andle-bar. At various times the bolts securing its ooter and lamp have slacked back on the road, and have been either too lazy or too unobservant to ighten the parts promptly. The result is that the lack has been chafed off, and the bar is greatly isfigured. Had it been plated, there might have een a little rust, but this disfigurement would be omparatively easy to remove. I can only restore to black bar to a decent appearance by returning to the factory. Touching it up with enamel will take a patchy job.

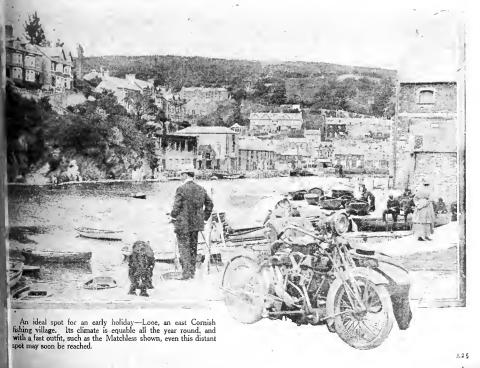

Finding Induction Leaks.

ERE is a Leatherhead correspondent's prescription for finding leaks in the induction system. Disconnect the carburetter, and plug the inlet with a tight-fitting cork in which a short tube is been fitted. Light a pipe and blow smoke into

the tube with as much pressure as possible. It is said that a man with a 5cin. chest, smoking pure shag, can obtain wonderful results by this method. Another disgruntled correspondent complains that he tried this tip with a two-stroke engine. It took 2 lb. of shag to fill the crank case with vapour, and he had to beat a hasty retreat from internal motives just as dark blue smoke commenced to pour from every joint in the engine. Seriously, I question whether it is easy to procure the requisite pressure from the human lungs; but if any smoke-producing chemical were burnt in the barrel of a suitable tyre pump connected to the aforesaid tube, the smoke test should prove very satisfactory.

Another Way.

T.T. winner recommends quite a different method of tracing induction leaks. It consists of squirting petrol on the suspected joints whilst the engine is running in neutral or on the stand. Should the beat of the engine be affected by these external applications, it is obvious that the joints are faulty. An ex-D.R. forwards an E.F. tip on similar lines. Open the throttle, shut the air, and revolve the engine forwards a few times until the induction pipe is swimming with petrol. Then close the throttle, and turn the engine backwards, when petrol will be blown out at any leaky joints. A Scott rider inoculates a piece of fine wire gauze with French chalk from the repair outfit, shakes off the surplus, and applies the gauze to any suspected leak, bending it to fit the piping where required.

A ROTARY VALVE ENGINE.

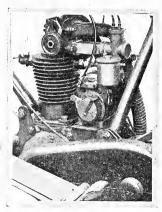

The Gri 3 h.p. Motor Cycle with Detachable Engine Head. A Chain-driven Rotary Distributing Valve is fitted

T is not always that an experimental machine involving drastic departures from standard motor cycle practice is presented to us for inspection in its completed form. The one we are about to describe, however, incorporating an engine designed by Mr. G. R. Inshaw of 55, Cecil Street, Hill Head, Glasgow, is an exception to the above generalisation. Although the machine itself is on standard lines, its claim to notice lies in the novel arrangement of valve mechanism, and many special features are claimed for the construction adopted, including simplicity and over-all efficiency. The engine works on the normal four-cycle principle, but, in place of the conventional type of valve mechanism, the flow of gases is controlled by a rotary distribution valve in con-junction with a single overhead poppet valve.

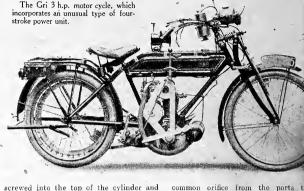

Overhead Valve and Cam Gear.

The valves are in a separate casting, screwed into the cylinder head, and they are driven by a roller chain from the engine shaft. This chain also passes over the magneto sprocket, so that the one drive serves a dual purpose. By moving the magneto on its platform, the tension of the chain may be maintained or adjusted when necessary. It will be noticed that this construction eliminates cam gear in the crank case itself, and the cam gear in the crank case itself, and the latter is correspondingly simplified—in fact, the two halves of the case are perfectly symmetrical. The cylinder also is of a simple harrel shape, and can be machined internally and externally throughout its whole length, with the exception of the sparking plug and decompressor besset at the tar. pressor bosses at the top.

The valve housing, which is a casting constituting the cylinder head and containing the inlet and exhaust ports, is

A detachable head, screwed into the cylinder, houses the chain-driven rotary valve and cam.

screwed into the top of the cylinder and held in place by a lock ring. Both the top surface of the cylinder and also the top surface of the cylinder and also the under surface of the ring are ground flat in order to secure a perfectly gastight joint. The rotary valve, which is of cast iron, is carried transversely in the detachable head in which it runs with a small clearance. It is mounted at each end on annular ball bearings, On one end of the rotary valve spindle is a cam operating a poppet valve through the medium of a roller-ended rocker.

Cycle of Operations.

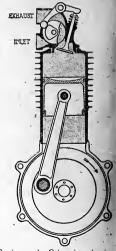

The action of this valve will be most readily understood on reference to the diagram of the engine in section. It will be seen that the inlet port is placed immediately beneath the exhaust, and that both passages through the head are in communication with the combustion chamber, through the common orifice sealed by the poppet valve. The rotary valve places alternately one or other of the two passages in communication with this orifice. It will facilitate matters to consider the cycle of operations from the beginning of the firing stroke rather than from the beginning of the induction period, since the action of the poppet valve is common to both exhaust and inlet strokes. During the firing stroke the rotary valve commences to uncover the exhaust passage, the poppet valve being closed. As the piston nears the bottom of the stroke the cam also comes into operation, and the poppet valve is lifted. piston then rises, and the exhaust gases are expelled. The poppet valve remains open, and the rotary valve now uncovers the inlet passage, and the piston, again descending, induces the fresh charge in the ordinary way. Before the compression stroke commences both valves close, and the cycle of operations is then reneated.

Among the advantages claimed for this system of valve construction and operation are: (1.) That the rotary valve is not called upon to hold compression; it merely acts as a distributer so that the common orifice from the ports to cylinder may be used.

The poppet valve is responsible maintaining the compression, and or light spring is needed in order the shall work satisfactorily. Indeed, engine has been run without the spring the control of the spring of the control of the contr eigine has been run without the signat all, as the compression and explicate pressures tend to keep the valve of when it is not depressed by the cam.

(2.) That the life of the poppet valvery long, as it operates under conditions for a valve of this type, I have a long as a valve of this type, I have a long as a valve of this type, I was a valve of this type.

placed in an exposed position on cylinder head, and also being cooler the passage of the incoming charge.

Section o. the Gri engine, showing ! valve gear; the exhaust stroke is near completion.

MOTOR (YCLE

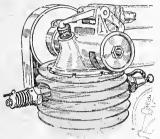

Rotary Valve Engine .---

5.) That a very efficient combustion muor design may be used. Is this type of valvo gear does not a lise! to the adaptation of an exhaust we lifter for control purposes, a small pression release, similar to those emiyed on two-stroke engines, is fitted the front of the cylinder.

Normal Valve Timing.

my desired timing can be arranged, in the model we inspected a certain in the model we inspected a certain unit of overlap between the exhaust inlet periods was allowed. In sing, it may be mentioned that no titing of the gases occurs with this gn of rotary valve, as the flow is by easy curves from the cylinder to respective ports; also, the rotary a uncovers the ports before the state of the rotary of the

bet valve opens. e machine to which this ongine will itted is to be known as the "Gri," the specification includes a normal type of frame, with aluminium foot-boards, Brooks saddle, Brampton Bi-flex forks, 26in. × 2in. tyres, and a two speed gear box, with clutch and kick-

The poppet valve is operated through a rocker from a cam on the ball bearing rotary valve.

starter, and chain-cum-belt drive. The cinging is to be rated at 3 h.p. (83 × 79 mm. bore and stroke = 427 c.c.). A C.A.V. magneto is fitted, and a Brown and Barlow carburetter,

The exhaust gases are discharged rearwardly, and carried to the silencer at the front of the engine through a flexible metallic exhaust pipe. The chain drive to the valve gear and magneto is com-pletely and neatly enclosed in an aluminium case.

Satisfactory Power Output.

We had a short trip on the machine, and although an abnormally high gear was fitted (4.1 to 1), the engine pulled remarkably well, and the valve gear was extremely silent in action.

In broad outline this form of valve gear is not entirely novel, but it is claimed that the chief disadvantage of the type, i.e., deflection of gases, has been climinated by this particular design of rotary valve.

TWO-STROKE IMPROVEMENTS.

A Re-designed Villiers Engine with Many Refinements included in the Specification.

OTOR cyclists who are familiar with the Villiers engines will be in-terested to learn that the new [11]. model, which will eventually lant the existing patterns, possesses detail modifications making for

ement and efficiency ement and efficiency. the issue for March 25th, p. 363, we thed the Mark IV. engine, fitted with the leel magneto, and the Mark III. is ical, except that it is fitted with a lard flywheel and a conventional ordivan horse-shoe type magneto.

sentially the difference between the engine and the previous model lies the modified cylinder casting, which derably enhances the external ap-age. Observation will show that arburetter is attached almost at the of the cylinder wall, and it is thus I from a position in which formerly

to a position in which formerly situ-the inlet port remains in the position immediately below the est limit of the traverse of the piston and the gas is led through an inducpassage cast integral with the cylin-

der. Greater efficiency is claimed for this arrangement, as the gas is warmed on its way to the crank case, thus avoid-

Its way to the crains case, thus avoiding condensation.

The sparking plug has been moved to the centre of the cylinder head, and the open release valve, previously in this position, is now placed at the front, in communication with the exhaust port by means of a duct in the cylinder wall. Owing to its being practically isolated in the top cooling flange, the plug keeps remarkably cool, while the release arremarkably cool, while the resease arrangement is much more silent in operation. A commendable feature is that the Bowden wire controlling the valve can be inserted or withdrawn without soldering, as it is held in place by a set

Double silencers, a familiar peculiarity of the Villiers unit, are retained, but the exhaust port is now inclined, so that the pipe leads directly to the expansion chamber without the awkward angle seen on the earlier modelz.

No serious alterations have been found nccessary in the crankshaft assembly, which is of the built-up type, having roller bearings in the big end. Lubrication is by splash, the oil being led to a special mion incorporated in one of the front engine plate bolts, which is suitably drilled in order to convey the oil into a recess in the crank case, where it reaches the moving parts.

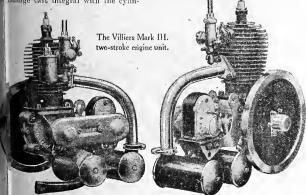

TOOLKITS.

THERE is always room on the market for a good set of tools at a moderate price, especially as so many secondhand machines find new owners every year and the motor cyclist sometimes mislays or retains the best tools of his kit when selling.

A toolkit sold by Spencers of Coventry.

Messrs. Spencer Bros. are making a speciality of supplying tool-kits, and, since they are practical riders, the selection and quality should be everything that can be desired. Two kits are marketed, the first being contained in a strong leather roll, with pockets for each tool, and including tyre levers, screwdriver, a set of box spanners, 6in. adjustable, belt punch, valve extractor, bin. combination pliers, bin. nut pliers, and a 6in. half-round tangless file, the price being 25s. A cheaper set in a canvas roll is sold at 15s.

A scene at the loot of Kop Hill during the Essex M.C. hill-climb.

A FTER a cold, wet afternoon spent on the open summit of a test hill witnessing a hill-climb, it is pleasant to return to a good fireside, to light the inevitable pipe, and to consider, care-free, the events of the competition. Take, for instance, the Essex club's climb at Kop Hill, Princes Risborough, on the 27th ult. A better organised event could not have been, since to the

spectators, machine followed machine in rapid succession, with no annoying wait or wrangle between competitors and officials. Yet for that same spectator it was cold, bitterly cold, upon the bare hillside.

As a competition this affair was particularly interesting to think over, for it was so extraordinarily unlike the expected. Take the first class up—the passenger 1,000 c.c. machines—scarcely one seemed to be really fast, save and except those worthy members of the "Suicide" Club, E. C. Baragwanath and L. P. Openshaw, whose 8 h.p. Zeniths had all the old glony of real fast climbing

Incidentally, the rider's attitude ren much the same as the years roll I subject of amazed conjecture for yokels and the uninitiated gene After all, what can one think wher first part of the passenger to be se his stern high peaked in the air while he kneels in a devotional atti his head overhanging the motor c carrier.

MOTOR (YCLE

x M.C. Open Hill-climb,-

parison the 350 c.c. Class A machines red, for the plucky struggles of the ll engine lack sensation after the twins fast climb. F. Thorpe's glas lived up to its reputation in and had a fine purr, but was some slower than A. Milner's Diamond, Gus Kuhn's Levis, which was third ime, made the climb in 562s., a close for the Douglas. One competitor, veteran F. W. Applebee, really is derful, and deserves a medal for long ice, even if his Levis attained to no

A Curious Phenomenon.

by is it machines appear to do their t on the actual day? Is it that they unprepared, or that they are not out in tune, or is it just "bad joss"?
one following the Class B 500 c.c.
times would think so, for whereas T. De la Hay's Sunbeam was magnifiand deserved its win on time for an it in 395s., the formidable A.B.C.'s ad smitten with appalling luck. they were all heavy to gain advant-for the formula results, but then yer, no less, must needs have push appet trouble on two runs, the new-, Porter, violently misfiring on two ack's weirdly named Duzmo (a new fine with outside flywheel and overvalves) deserves credit for its 41;s. , the third man, Emerson, going up is. The remainder were disappoint-

nt that Class C, the 750 c.c., were better, as the Sunbeam won on in 38 s., the Duzmo improved to equalling the Sunbeam's first run, while Emerson as third on time was a fifth of a second faster than on his first

In the last class, D. 1,000 c.c. t. os, all spectators wisely shifted further up the bank, as the "Suicide" Club was due again. Openshaw's machine skidded and swayed up with a thundering roar, and the rider cut out on the bends, to cover the course in 32\(^2_3\)s., with Harvey-son's 7 h.p. Indian second in 35\(^1_3\)s. and De la Hay's Sunbeam third in 37\(^4_5\)s. Note the difference the sidecar made to Openshaw: 40₅s. with, 32₅s. without. But it *looked* a dangerous performance to the uninitiated, several of whom screamed.

Taken as a whole, there seemed to be of rider, but even if some had left undone the things they should have done np, after all it was not only the novice who failed, and everyone must begin at some time or other.

Results

A day's good sport, despite the weather, and well worth the run out to the little hamlet of Princes Risborough, not only because of the climb itself, but also to hear the thousand and one fairy stories retailed to one to explain why so and so had not done the hill in the 25 s. he expected

The following were the results on The Motor Cycle formula :

DIFFERENT MEN-DIFFERENT METHODS. Riders of Zenith, A.B.C., and Sunbeam machines in recent speed events.

A MIDLOTHIAN TRIAL.

Many Competitors Eliminated in a Severe Trial on the Lowland Hills.

A Harley-Davidson outfit, followed by a Douglas, on one of the test hills,

HE fact that out of over fifty entrants only six qualified for first-class awards, and of these Claud Duncan's 23 h.p. Blackburne-engined Verus was 24 n.p. Blackothite-engined vertus was the only solo machine, says much for the difficulty of the course chosen for the recent Edinburgh trial. The howling wind and Manor Hill, with its appalling surface and the steep, rough climb of Victoria Crescent near the end were responsible for most of the trouble. Many who did well elsewhere were deprived of their awards by failure at one or other of these points.

One or two bad spills occurred, among the unfortunates being L. B. C. Cunningham, who was riding an overhead valve Douglas with a very high low gear, and H. M. Batten, who, atter surmounting the difficulties of Manor Hill with success, turned a somersault when endeavouring to make up time on a long descent over to make up time on a long descent over wet moss and hard bedrock, fortunately without damage to himself or his P. and M. Cunningham was unfortunately travelling at a fair speed when he fell, and shook himself badly, besides injuring his machine.

A Surprise Hill.

At Selkirk the competitors were faced. with an eleventh hour surprise in the shape of a formidable rise known as Victoria Crescent. This hill has a gradient of about 1 in 4, equal to the steepest part of Brooklands test hill, and a surface of loose stones-obviously a formidable test. Here J. B. Sanders (3 A.B.C.), S. Waldie (4 Bl. kburne), and G. Grinton (7 Harley Davidson) made superb climbs.

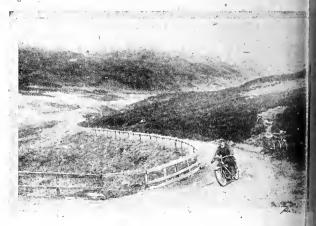

Owing to the gale which had to be faced among the mountains, petrol consumption was unusually high, and in consequence Batten had the bad luck to run out of petrol fifty yards from the check, thus spoiling his clean sheet and baülking Duncan, who got past very cleverly. A similar misfortune befel Shepherd (6 Campion sc.) on the Devil's Elbow.

A great many competitors were weeded out quite early in the day, for the seventeen mile run from Eddleston to Peebles lay over the mountains, and contained many places very difficult to negotiate.

The first-class awards went t following:

- C. Duncan (2⁵4 Verus). V. Reid 18 American Excelsior sc.). G. Grinton (7 Harley-Davidson sc.). D. S. Alexander (8 Enfield sc.). F. I. Hutchinson (8 Williamson sc.). R. S. Macrae (7 Harley-Davidson sc.).

The awards show that the cours an exceedingly trying one to the rider, since, in spite of excellent in many cases, only one got through a clean sheet.

S. Hubbard (33 h.p. Scott) on Kershope Swire.

Paris-Nice Results Annulled.

Union Motocycliste de France Refuses to Accept Results of Transcontinental Trial.

FROM OUR PARIS CORRESPONDENT.

QUITE a sensation has been caused in French motor cycle circles by the decision of the Union Motocycliste of France to refuse to accept the results of the Paris-Nice Trials. As a consequence, the event must be considered as non-existent, and any advertising which may be done in connection with it will be considered as empty, and will expose those responsible for it to the penaltics provided for under the International

rules.

The fact that this decision has had to be taken by the Union Motocycliste is

be taken by the Union Motocycliste is very unfortunate for the British competitors who went to France at considerable expense and trouble, and who appeared to have won a victory. It naturally throws discredit on the whole motor cycle movement, for the hard fact has to be admitted to the general public that a sporting event to which great importance has been attached must be looked upon as a farce. The individual competitors who went through the trial housestly and conscientiously have, according to the U.M. de F., been robbed of the fruits of their victory by the negli-

gence or incompetence of the organisers. In a conversation with one of the officials of the Union Motocycliste, it was ascertained that the men responsible for this event were totally unable to furnish proof that the results claimed had been obtained. The lack of organisation extended throughout the event. No proof could be furnished that the individual riders had checked in and been checked out of the various controls between Paris and Nice, so it is claimed. When the destination was reached the arrangements were far from perfect, and in hardly any case could definite, indisputable proof be given that the performances claimed had really been accomplished. After calling upon the organisers to furnish this proof, and failing to get satisfaction, there was, no course open to the Union but to annul the event.

A Privately Organised Event.

It should be pointed out that Paris-Nice was organised by a newspaper with the approval and under the control of the Union Motocycliste. This is a common practice in France, although practically nuknown in England. The newspapers which have taken this initiative in the past have undoubtedly enormously helped the development of motoring, at a time when clubs were not sufficiently powerful for the work. Experience of the last few years has shown, however, that newspaper-organised events are not desirable. The primary object of the paper is to get profit for itself, if not in money at any rate in advertising, and this desire is generally so strong that details of organisation are given secondary consideration. It will be recalled that we drew attention in our report of the event to a number of imperfect arrangements and last minute decisions. All the same, the decision to annul the results will occasion much surprise.

In justice to other organisers who have events on the 1920 calendar, and for the enlightenment of riders interested in French trials, it should be pointed out that a repetition of Paris-Nice is not likely to occur in connection with the international races and competitions for which well-established clubs and the Union Motocycliste are responsible.

Starting Tips for Scott Riders.

- Easy Starting Hints and a Note on the Consumption of the Scott Two-stroke Engine.

ON a recent occasion "Ixion" bewailed the fact that the Scott possessed "the thirst of an Irish navy," and on page 371, April 1st, he demands that his Scott shall start from cold at the first kick. Having had considerable experience of Scotts—prewar, war, and post-war—I think that such a requirement is a little unreasonable. Two points must be remembered: [1, That there is a large induction system (inlet pipe, manifold, transfers, and rank cases) to be filled before a combustible mixture reaches the cylinder leads; and (2) that the foot-starter gives parely one revolution to the engine.

To expect the whole of the induction system to remain charged with gas during a cold night is decidedly hopeful, to ay the least, and bearing these facts in and, the following methods have been ound most satisfactory.

Circulating the Gas.

Filling the engine with mixture can may be done by rotating it until a sufficient quantity has been induced, and this s carried out, provided there are no air eaks, by giving a number of gentle depressions to the starter pedal. The assumer in which this is done can only be described as desultory; do not attempt to tart the engine, simply push down the edal, after well flooding the carbutter, in a "don't care whether it starts r not" fashion. Anon (after about alf-a-dozen digs) a gentle "kick-back" rotate the gas as circulated to the combustion chambers. One smart depression will now call forth be desired burble. The whole process is

effected sans fuss, sans labour and sans perspiration; moreover, there is no danger of damaging the starting mechanism by attempting the "first kick" method against the resistance of congealed oil on the pistons.

On Priming.

In really cold weather, it is undoubtedly easier to let the engine itself do the work of sucking in the preliminary charges, and this can be done by fitting a compression tap (spark plug thread) in one of the cylinder heads; no special kind of tap is needed. Procedure: Dope liberally, well flood carburetter, give one gentle dig on starter pedal to free the pistons, then another sharp dig. The result will be the desired instant start.

THE NEXT STAGE!

MOTOR CYCLISTS interested in small or large cars should read

the forerunner of all motoring journals. Founded in 1895, it remains the largest and most successial automobile paper, and enjoys the greatest circulation. It is universally accepted as the representative British motoring journal.

mosooooooooooooo

All the foregoing should be carried out with the half-compression lever raised and ignition fully advanced.

Quite the easiest way of starting is to stand facing the rear of the machine, left hand holding carrier or saddle, right hand on half-compression lever, right foot or starting pedal. If this is done with machine on stand (not good for the latter, anyway), be gentle in the manner of kicking, or the machine may jump forward when engine fires.

Over Priming.

The fitting of a union in inlet pipe (with connection to drain tap of tank) is not to be recommended. Leaks, air or otherwise, in the induction system are fatal to good results, and the suggested arrangement adds a possible source of trouble. Over-doping on the induction side of the engine also makes for difficult starting. When engine is warm, it should start first kick; make certain that the starter ratchet has engaged; avoid kicking if you value the starter's longevity.

A word as to that "Irish navvy thirst." My present Scott has averaged 57 m.p.g. (benzole) with sidecar over the last 1,500 miles. The carburetter fitted is not yet on the market, but the result proves that high consumption is not an inherent defect of the Scott engine. One tip in conclusion: When running to a standstill, declutch, open throttle, and stop engine on the switch: this will allow a full charge to remain in the cylinders, and an easy restart is assured any time before the engine becomes absolutely stone cold.

Ilkley M.C. and L.C.C.

A Novice Trial for the Founders' Trophy will be held on the 11th inst. All members who have not won a gold medal are eligible to compete.

Belvedere and District M.C.C.

The opening run of this newly formed club will be held on the 11th to Tonbridge, when all motor cyclists interested are invited to attend. Further particulars can be obtained from the hon. sec., Mr. L. J. C. Cope, at club headquarters, The Eardley Garage Co., Woolwich Road, Belvedere, Kent.

Hull M.C.C.

A large number of new members were elected at the last meeting, and a varied and interesting programme has been-arranged for the year. The first com-petition proper will take place on the 24th, meeting at Anlaby Road trant terminus at 2.30 p.m., when a run will be fhade to Welton for tea.

New Club for Darlington.

Members of the North Road Institute and employees of the N.E.R. works at Darlington have recently formed a motor cycling club. The following officers have been elected for the present year: Captain, Mr. R. Adamson; sub-captain, Mr. C. Barr; and secretary, Mr. R. W. Chapman, of Rabydene, Cockerton.

Newport and County M.C.C.

This recently formed club has already a membership of one hundred, and promises to be a very successful organisation. A prize has been awarded for the best design for the club badge submitted by: members.

It is hoped to arrange a speed tria. shortly after the Easter holidays.

Northern Suburbs M.C.C. (Sydney).

The following riders who competed in the second twenty-four hours reliability trial completed the course successfully, having lost no points: J. Neal (Indian), H. Wood (Indian), J. Persival (Douglas), H. Wood (Indian), J. Persival (Douglas), F. Delandro (Indian sc.), R. Kirby (Indian sc.), P. Boyce (Excelsior), R. Dewick (Indian), A. Townsend (Indian), A. Tuckey (Harley), S. Huntington (Harley), E. Cotter (Excelsior), and E. Neusey (Indian). The route included Mount Victoria, Bathurst, Goulburn, Picton, Fig Tree Bridge, returning to Sydney.

Surbiton and District M.C.C.

The reliability trial for the Maudes inter-club challenge shield, to decide the winning team, will probably be held on May 15th, and cover a 100 miles course over the Surrey hills. It is hoped to arrange to finish on Brooklands Track, when complete teams will undergo a speed test to decide the winner. This date has been chosen to enable the committee to use the track at the close of the Junior Car Club speed trials. Full particulars will be issued later.

A sporting trial over a secret course has been arranged for the 24th inst. for the Dale cup. Ability to judge a speed of 20 m.p.h. without watches or speedometers is the main feature.

***************************** N.M.C.F.U. (Sheffield).

A very successful concert, the last event on last year's programme, was held on the 27 ult., and was greatly enjoyed by all present. Unfavourable weather failed to damp the spirits of members on the occasion of the club's opening run of 1920 to Matlock. There was a good turn-out, and members spent the afternoon fraternising with the Derby M.C.C., who were holding an impromptu hillclimb, returning later in a happy though wet condition.

Cumberland County M.C.C.

A one-day open Reliability Trial is being organised for July 17th. Starting and finishing at Carlisle, a sporting course through the Lake District will be selected, affording competitors an opporselected, affording competitors an oppor-tunity of spending an enjoyable week-end in that delightful country. It is proposed to divide competitors into the following classes: Lightweights, Solo 500 c.c. and upwards, sidecars, cycle cars, light cars, and, if possible, scooters. Communications should be sent to the secretary. Mr. H. A. P. Mayson. to the secretary, Mr. H. A. P. Mawson, 18, Bank Street, Carlisle. Details will be published later.

Leeds and District M.C.

A very interesting programme of no fewer than eight events has been arranged for the remainder of April. On the 9th a smoking concert will be held at the Griffin Hotel, commencing at 7.30 p.m.; while on the following day a hillclimb will take place at Norwood Edge. Competitors will be divided into six classes, and prizes will be awarded to the winners, who will be eligible to compete in the final event for a special prize. It is hoped that members will turn out in force, as so much depends on the individual in making these events a real success.

M.C.U. of Ireland (Uister Centre).

The date for the End-to-end Reliability Run previously fixed for July 12th and 13th has been altered to the 15th and 16th of the same month.

Tredegar M.C.

An open hill-climb is being arranged for the 29th at the Fiddler's Elbow. Details can be obtained from Mr. E. W. Sutherby, sports secretary, Whitehall Buildings, Tredegar.

Keighlev M.C.

A new club has been formed in the Keighley district, and will be known as the Keighley Motor Club. Anyone who is interested should communicate with the secretary, Mr. B. Feather, 26, Draka Street, Keighley.

Runcorn and District M.C.

A motor club has lately been former in Runcorn. It is intended to hold general meeting on the 12th, in orde to discuss the 1920 programme. Pro spective members are invited to get it touch with Mr. H. A. Leach, 41, Th Holloway, Runcorn, who has been ar pointed hon, secretary.

Newcastle and District M.C.

A paper on "The Magneto" was rea by Mr. G. Batty before members o March 26th in the new club rooms at th Grand Hotel. Mr. Hugh Mason, durin the discussion which followed, expresse the opinion that the magneto would neve be entirely supplanted by the dynam and accumulator lighting and ignitic system :

North London M.C.C.

Good roads, fine weather, and tl welcome presence of two lady membe made the run to Stevenage most enjo; able. There was a good attendance, as a great variety of machines were to l seen at the Sun Hotel, where lunch wa served. The club is indebted to the H.C. Motor Co., of Great Portlar Street, who have kindly offered a silv challenge cup.

N.M.C.F.U. (Leeds).

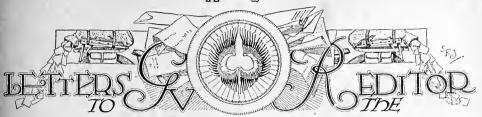

April 18th is the date fixed for the Mitchell Trophy reliability trial, startic at 9 a.m. from the City Square. The route selected embraces Wakefield, Barn route selected emoraces wakefield, Daniely, Huddersheld, Stamland (lunch Red Lion Inn), Halifax, Bradford, a hack to Leeds. Entries, accompanied, fee of 5s., should be sent to the spot secretary, 1, South Mount Terrace, Bee ton Hill, Leeds, by the 10th inst.

Public Schools M.C.C.

Starting at 1.30 p.m. from Barnet, Starting at 1.50 p.m. from Barner, "touch nothing" run will be made Woburn, where arrangements for t night have been made at the Bedfo Arms Hotel.

Competitors will return the following morning, and will sign a form at the fini to certify that no adjustments have be made.

Marks will be given to count towar the competition for the Robinson challen cup, awarded for the highest aggrege obtained during the year.

The Editor does not hold himself responsible for the opinions of his correspondents.

All letters must be addressed to the Editor "The Motor Cycle," Hertford Street, Coventry, and must be accompanied by the writer's name and address.

THE SPEED OF A HARE.

Sir,-The Hare did not think the Baby Triumph could do 40 m.p.h., and was not certain if "Tortoise" had his throttle full open or ignition fully advanced! So it slowed

THE PULLIN MOTOR CYCLE.

Sir,—I was immensely pleased to read in the spring number of *The Motor Cycle* of the Pullin motor cycle, which so very nearly reaches the ideal—certainly, in my opinion, representing the most advanced stage of motor cycle engineering.

If the service given is at all like that which can be expected from the specification, together with the reasonable price, then thousands will buy it, and all other machines will have to come down in price and up to it in design.

Good Inck to Mr. C. G. Pullin. R. BANNINGTON.

AIR VALVE IN INDUCTION PIPE.

Sir,-I was interested in the account of the Rapier economy valve described in the issue of March 18th, and recollected some simple experiments I had tried, which forced me to the conclusion that an antomatic extra air between throttle and inlet valve was a failure.

It is obvious that with small or no throttle opening this valve is diluting or admitting air at its maximum, owing

to the high vacuum in the inlet pipe.

With large throttle opening, and consequently low vacuum in the inlet pipe, the valve was inoperative, as the atmosphere rushed in through the carburetter in preference to lifting the valve against the tension of the spring. This was giving the reverse effect to that desired; that is, slow running defeated and no effect when romping away all out. I subsequently fitted a handle-bar controlled, and scrapped the automatics.

the automatic.

I am not applying the foregoing to Mr. Castell's invention I am not applying the loregoing to all the control (which is more than an extra air), or disparaging, it in any way; in fact, I wish him and all engaged in improvement the best of luck.

GEORGE MAGGS.

PROVISIONAL PRICES.

Sir,-In your issue of March 18th a correspondent, W. A. Pechey, accuses motor cycle manufacturers of profiteering on the grounds of ntilising components made in pre-war times in the construction of 1919 models, and charging 1919 prices.

Surely, Mr. Pechey has little knowledge of commerce

when he makes such an accusation.

In any branch of business, a seller is entitled to the current market price, and to reverse the case in the event of a slump in prices; the general public loses no time in forcing the producer to adopt current prices, regardless of

probable heavy loss.

Also, in the case in point, it must be considered that this 1912, to manufacture certain firm laid out money in, say, 1912, to manufacture certain parts, and that that outlay has been unremunerative, and, to all purposes, dead for, say, seven years. The price now obtainable for those parts shows approximately a profit of 75% over the selling price when manufactured. This 75% profit has taken seven years to realise, which means a profit of 10.7% per annum, and that, in these times of high wages, small production, and heavy all round expenses can hardly be called even a working profit, far less profiteering.

May I say that I am not a motor cycle manufacturer, or in any way interested in the trade, only I like to see fair play.

A. R. MACNAUGHTON.

HONOUR TO WHOM HONOUR!

Sir,-Your Correspondence column cannot fail to interest your readers, if only because of the differences of opinion there presented. One species of letter which, I feel sure, must hold the attention of all, is that which deals with the husiness methods of the various firms. May I trespass on your space to add my appreciation of the F.R.S. Lamps

I wrote to this firm asking for a quotation for a new head lamp bracket, which had been broken. By return of post I received a letter requesting a more definite description of the bracket required, together with an offer of a replacement, free of charge. Without any delay this was delivered, and I, for one, cannot but admire the celerity of delivery, and, more so, that high regard for reputation which must always be a firm's best advertisement.

Bellshill.

TYRE MILEAGE.

Sir,—I gather from your comments on Mr. E. S. Bovell's letter, published in your issue of March 11th, that you would be pleased to have data regarding actual tyre mileages. As an antomobile engineer, I have always kept accurate records, and hand you herewith a copy.

These are actual observed figures, correct to, say, plus or minus 24%, and no comments are necessary. I trust that they will be of interest to your readers, and, should you desire it, could also give you records of petrol and oil construction, belt more the control of the con

sumption, belt wear, etc., over the same periods.

I have no business interest in the tyre trade, and motor cycling is merely a pastime. My own speciality is commercial vehicles.

TYRE MILEAGES. SEASONS 1912-13-14, 32 H.P. B.S.A. AND SIDECAR. Miles FRONTS-(a) 24in. Dunlop; scrapped at 6.480 Retreaded 2\(\frac{1}{2}\)in. Members of the Sheffield and Hallamshire M.C.C. at the start of their opening competition.

SPEED WOBBLE.

Sir,—May I suggest that potential wobblers should verify the "shake" in front wheel bearings and steering head. A few years ago a new T.T. machine I had used to develon an eerie and alarming "roll," even on a dry road at the low speed of 17 m.p.h. In fact, it occurred particularly at that critical pace. After adjustment of above details the machine was quite steady up to 62 m.p.h. on a good road. Three-speed hub-geared machines I found absolutely

dangerous at speed, and even the countershaft geared ones are distinctly inferior to the single-geared on grease or ruts in my experience. Further, at high speed I find the old pattern Druid fork superior to the type with spring links; in fact, I feel unsafe with any fork giving fore and aft movement, and was recently quite frightened on a wellknown two-stroke.

A long wheelbase and magneto in Triumph position seem to conduce to extreme steadiness in the case of single-gear machines. AUTOBORE.

London, S.W.

Sir.—I have been interested in various letters on speed wobble which have appeared in your columns since last November. A discussion of the matter for a bicycle can be found in "Messenger of Mathematics," vol. xxviii., 1898-9, pages 151-169, and I append some remarks upon this by the

Professor of Engineering here (Trinity College, Cambridge):
"For the motor cycle the figures would be very different, and the gyrostatic momentum and the powerful engine drive might make it a very different problem. But it seems likely that it is synchronism that causes the machine to become

und 10 is synchronism that causes the machine to become unmanageable, when the period of slight but regular road inequalities matches a natural period of the bicycle.

"N.B.—A push cyclist used to a 'single' and trying a tandem or triplet for the first time, makes usually a serpentine track of enlarging amplitude. His corrections are right in sign but wrong in phase, and the oscillations are unstable."

I have a 1914 7.9 h.p. racing single-gear Indian, with very low T.T. bars, so that my weight is thrown right forward over the tank. I have deliberately tried to get a wobble on —solo—at all speeds from 8 to 75 m.p.h. or so. I got a wobble at 10-15 m.p.h., but it was solely due to my inability properly to balance the 320 odd Ib. mass of the machine. I have also noted effects above 45 or 50 m.p.h. Try as I may I cannot get a wobble on in any handle-bar position, at any speed, on any road, solo, or with a carrier passenger weighing 9 st. Solo I have had the back wheel doing rhythmical "take-offs," which show on the track in the form of a zigzag line.

On the other hand, on a 4 h.p. Triumph, touring bars, I find it extremely difficult to control the path at 45 m.p.h., or above. Possibly that is due to my transference from a heavy twin to a light single directly. But my "carrier," heavy twin to a ngin single directly. But my carrier, who is an experienced motorist, sidecar driver, and motor cyclist, gets the same results. Incidentally I have a Clyno two-stroke, which I have never been able to get into a wobble either.

C. E. V. WILKINS.

Trinity College, Cambridge.

A BUSINESS MAN'S IDEAL MOTOR CYCLE.

Sir,-I have been much interested in your short description and illustration of miniature open frame bicar in your issue of March 11th, page 280, at present in course of construction by Messrs. Lister and Co., of Keighley.

I have been waiting for something of this kind for years,

chiefly for the purpose of going to and from business. The

conventional frame does not appeal to me on account of the want of efficient protection from the weather. This new type would apparently give excellent protection, as I see no objection to making the screen in front 2tt. wide or more (so long as the machine will go through an ordinary doorway); glass windscreen could be added, which would give practically as good protection as a car.

I am glad to see the size of wheels and tyres proposed, as the small scooter wheels could not give much comfort for country riding, especially with roads in their present state. If a starting device (to obviate the running start), a clutch, sprung frame, and automatic or semi-automatic oiling system could be added, I think we would have approached appreciably nearer the ideal type of motor cycle.

ably nearer the ideal type of motor cycle. My ideal means comfort, which includes cleanliness and absence of noise. I do not ask for a gear box, as I am not ont for speed, and I believe there are a host of middle-aged and elderly business men who would gladly purchase a machine of this kind, but who at present fight shy of the conventional motor cycle.

BUSINESS MAN. conventional motor cycle. Whitehouse.

THE T.T. AND TRADE.

Sir,-The Sutton Coldfield and North Birmingham Auto-Sir,—ine Sutton Coidneld and North Diriningham Auto-mobile Club view with favour Mr. F. S. Whitworth's suggestions, and feel they would like to support the idea of entering a representative, riding, as it were, under clubcolours.

They would like to see the entries by clubs confined to anateurs not already entered and riding their own machines. This might eliminate untair assistance in the loan of an additional machine, for instance, for use in qualifying rounds, leaving the special one for the race. In this way, with contributions towards expenses or entry fee paid, it is felt that it would swell the entry list and encourage the type of rider we all wish to see in the T.T. races.

If a few other clubs would follow our lead, maybe the A.C.U. would consider awarding a special prize to the rider

A.C.U. would consider awarding a special prize to the rider gaining the best position in either class. We suggest that, with intercommunication between different clubs favouring this scheme, leaving the A.C.U. to fix details, there is still time to make it an interesting and extra attraction.

SUTTON COLDFIELD AND NORTH BIRMING-HAM AUTOMOBILE CLUB. F. W. SOUTHERN, Secretary.

Sir,-The two main objects of the T.T. Races should be: To enable manufacturers to test new features of

2. To enable them to prove the ability of their standard types to come through a gruelling test satisfactorily.

In actual practice, very many manufacturers simply build "freak" machines, having little or nothing in common with their standard types. If these freaks do well, the results are duly advertised all over the world as an argument in favour of buying the standard machines. Strauge, but true!

This absurdity could quite easily be avoided if manufacturers entering one or more non-standard machines were

compelled to enter a similar number of stock mounts. Buyers would then be guided by the performance of the latter, and not by that of mere freaks.

If this proposal were adopted, manufacturers would still be able to test new features on experimental machines, while the makers of third-rate motor cycles would cease to gain kudos from the performances of their first-rate, specially built racing freaks. This year the manufacturers, with some

honourable exceptions, seem to think that, since they are unable to waste their time on freaks, the race should not

Are they so ashamed of their stock mounts that they fear to enter them for such a stiff test? Or is it that they, quite naturally, dare not pit their standard machines against other makers' freaks?

If the latter supposition be correct, non-standard mounts should be barred from this year's race. In any case, the race should be held: it would provide all the better sport for amateur enthusiasts if manufacturers were not repre-

After all, why should the biggest event of the year be scratched, simply because manufacturers, ashamed of their stock mounts, and having umpteen million orders on their books, think it not worth while to support it?

CHARLES A. N. MORRIS.

Sir,-The reason stated by the majority of manufacturers who do not propose to take part in the coming Isle of Man T.T. races is that such participation would involve a tremendous amount of time and expense in preparing machines for the event, with a resultant loss in output, etc. This seems to be a very sound and good reason, on the manufacturer's part, as everybody realises the necessity of increased output, so that the adverse balance of supply and demand may be adjusted, with benefit to the community.

My point, however, is that this admits the fact that
the machines which run on behalf of the manufacturers are specially built racing models, ridden by expert riders, and the result of the race is perfectly valueless from the point of view of the public as regards the merits of any particular make, as any of these trade riders on any machine may win, according to the luck they may have, say, with regard to punctures, breakages of minor parts, crashes, etc.

What we want is a race in which only guaranteed standard machines will compete, so that the machine which emerges successfully from the gruelling event is exactly the "same as you can buy," then there will be a real reason for adjectival advertisements, as the "Super —," the "Perfect —," and the "Trusty —," etc. A. S. BRADLEY.

PISTON RINGS.

-Sir,-I now have an opportunity of replying to the interesting letter (published March 4th) of your correspondents, the British Piston Ring Co., Ltd., with reference to

my article on fitting new piston rings.

Before dealing with the points mentioned by your correspondents, I would state that the article was, as indicated by the title, intended to interest the average motor cyclist who desires to fit new rings in his engine, and who desires to have a certain amount of knowledge of the principles involved,

The technical data given in my article are by no means complete, and are in connection only with such matters as are under the control of the rider when buying and fitting

the rings.

The average rider would probably not be able to go deeply into a highly technical discussion of the subject, and such an article would be very long. I am of the opinion that your correspondents and myself share pretty well the same views upon this subject, but the subject being a long one, and our discussions being limited, we are both, I think, dealing with different aspects of the

First, any argument must take into account the method of making the rings; secondly, it is necessary to differentiate between "fitting new piston rings"—that is, renewing the rings-and fitting rings in a brand new engine during course

of manufacture. Your correspondents consider that the pressure of a con-lentric ring upon the cylinder walls is uniform. I quite agree with this as regards the case of a new, engine and langs, wherein the rings have-been made by one of the approved methods by which the ring is ground while clamped in a lig to the actual "running" shape.

That is quite sufficient to justify manufacturers in fitting concentric since in their seer entire and explains the small

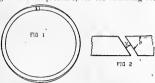

concentric rings in their new engines, and explains the small

sue of eccentric rings by manufacturers.

As regards an old engine having new piston rings fitted, technical technic

still be uniform; but, of course, cylinders do not wear evenly all round, and, except in cases where excessive wear has occurred, rings are not made to a specially larger size. The average motor cyclist would buy his new rings of the same size as the old ones. My contention is that the pressure is only uniform when these rings are fitted to a cylinder whose diameter exactly agrees with that to which the rings were ground.

In the case of a cylinder a little worn, the rings would give uneven pressure, for the following reasons : The greatest

bending moment occurs at the point diametrically opposite the slot. This portion is, therefore, subject to the greatest bending Now. i stress. this ring is titted into a cylinder that is a little

worn, it opens out a little more than intended, and the poration opposite the cut being subjected to the greatest stress naturally "straightens" out more than the remaining pornaturally "straightens out more than the remaining por-tions, and the ring tends to assume the shape and position shown exaggerated in fig. 1.

With an eccentric ring the stress in the ring is more even

all round, therefore the whole circumference of the ring has more tendency to "straighten out." I consider that in a worn cylinder (which includes almost any used cylinder) the eccentric ring would give more uniform pressure owing to the more equal stressing, and therefore more equal "expansion" all round the ring.

Your correspondents state, quite truly, that the commercial eccentric ring is only a compromise between the ordinary concentric ring and what we may term the "ideal" ordinary concentric ring and what we may term the "Ideal eccentric. We are in agreement on this point, and it should be noted that I mentioned the matter of compromise, the effects of the "ideal" ring on gas tightness, etc.

As regards your correspondents' remarks about hammered rings, I agree with these in the main, and also with

the statement that narrow rings wear more rapidly. I consider, however, that the latter point is not serious in cases where two narrow rings are used in one slot, as it very

where two narrow rings are used in one slot, as it very rarely happens that the two slots work round and coincide.

As regards the comparison of dimensions given by your correspondents, and also in my article. I think it should be obvious that the table in my article contains not actual dimensions, but values for the various factors given in the formulæ, the latter having been worked out by myself.

The values given in the table conform with the formulæ

given, and I think it is interesting to note t' it calculations based on equation (3) in my article agree very closely with the figure (gap left in fitting=0.0025d.) recommended by

your correspondents.

If anything, my figures and equations give a slightly greater gap, but this is because I worked out my formulæ to take into account the trigonometrical functions of the angle of the slot. This refinement makes my formulæ suitable for rings of any angle of slot, and it is evident that the distance across the gap given by my formulæ is measured in a direction normal to the surface of the slotted end.

I may supplement this by stating that for the case illus-

trated in fig. 2,

 $x=0.00000556 Td \pi \sin \theta$, plus a little extra "safe" clearance. (See article, January 22nd,

p. 93.)

All this is no doubt well known to your correspondents, whose letter I consider both interesting and helpful; at the same time, I think my article and your correspondents' letter were dealing with different aspects of the matter. The fact that space is limited leads to a rather scrappy treatment of the subject on both sides

H. GEORGE HARLEY.

Correspondents are urged to express themselves as concisely as possible, especially in view of the fact that only a small percentage of letters received can possibly be published. Many interesting letters are unavoidably omitted in consequence of their abnormal length.

A selection of questions of general interest received from readers and our replies thereto. All questions should be addressed to the Editor, "The Motor Cycle," 20, Tudor Street, London, E.C.4, and whether intended for publication or not must be accompanied by a stamped addressed envelope for reply. Correspondents are urged to write clearly and on one side of the paper only, numbering each query separately, and keeping a copy for ease of reference. Letters containing legal questions should be marked "Legal" in the left-hand corner of envelope, and should be kept distinct from questions bearing on technical subjects.

A Curious Trouble.

I have a 4 h.p. Calthorpe-Jap, with sidecar, with which it will do anything I wish. An Enfield two-speed gcar is fitted, and the Amac carburetter has a 26 jet. I am now riding solo, and the machine does not run nearly so well, and it is using more petrol than before. I have fitted a 24 jet, and it will not run at all on a 22. I was thinking of lowers ing the float, but would like to know your opinion first.—R.P.

The correct petrol level is 32in. below the level of the top of the sprayer. You might carefully examine the float to see whether it is punctured, and also examine the magneto timing to see that this has not slipped, thus retarding ignition. With the jet you mention, the engine should most certainly not have a high petrol consumption. The mere fact that you are at present using the machine solo can have nothing to do with your trouble, aithough, apparently, the removal of the sidecar has coincided with some fault or other.

Over-Geared.

I shall be glad if you will give me advice on the following: I have a cycle car which is chaindriven throughout. At present the top gear is too low, there being twenty-six teeth on the engine sprocket and forty-one teeth on the gearshaft sprocket. With top gear engaged, the engine sprocket revolves three times to the driving wheel once. Bottom gear engaged shows seven and threequarters to one turn of the back wheel. I am wanting to fix a belt drive from the engine to the gearshaft, and am thinking of an adjustable pulley on the engine and fixed pulley on they are to give an average speed of 25 mp.ph. on top gear?—C.C.H.

Instead of the top gear of your cycle carbeing too low, we should say that it is much too high. 5 to 1 would be preferable to 3 to 1. You have not stated the size of the final reduction sprockets. From the other sizes given, however, we may presume these to have sixteen and thirty teeth. If you require a primary belt drive, pulleys of 3\frac{3}{2}\text{in.} and 10\text{in.} diameter will be needed on engine and countershaft respectively, and on these the belt would not be running under ideal conditions. Retaining chains, we would suggest that you gear as follows: Seventeen teeth engineshaft, forty-one and fourteen teeth

on the two countershaft sprockets, and thirty teeth on the back axle. This will give you a top gear of approximately 5 to 1.

Fitting Drip Feed.

Last winter I purchased a 23 h.p. T.D.C. two-stroke engine which I fitted to my Calthorpe Junior frame. I should be very much obliged if you would give me advice on the following: (1.) Would a drip feed be a satisfactory fitment to my machine, as I think it would make starting easier? The tank has an oil compartment and pump, but the engine has no connection for oil, so I am using petroil system. (2.) Could I drill and tap the drain nut on bottom of crank case, and so make connection for the oil pipe at this point? I may say that so far the engine has done very well, despite its single gear.—W.K.D.

(1.) The drip feed would be quite satisfactory on the engine you mention, and we should recommend that you convey the oil to the induction stump between the cylinder and carburetter. (2.) It might not be advisable to lead the supply of oil to the drain plug at the bottom of the crank case. A little experience on the road will enable you to find out the quantity of oil required. Try setting 'the regulator to deliver about thirty drops per minute.

more ?-W.J.M.

A Two-stroke "Mystery."

I should be very grateful if you would tell me the reason for the following complaint, which occurred with a 23 h.p. two-stroke. One day the engine refused to start, and on removing the plug a good spark was obtained in tho open. The plug was replaced and another unsuccessful attempt to start another unsuccessful attempt to start the engine was made. The plug was again removed, and found to be wer with petrol; this was dried, and the plug was replaced. The carburetter was then taken down and re-fitted, and was found to be in order. Another attempt to start the engine having failed, the crank case was drained, and found to contain about half a pint of oil and petrol mixed..
After trying to restart the engine, the crank case was drained again, with the same result; in fact, the same thing occurred after every unsuccessful attempt to start. The machine finally started after cleaning the platinum points and carbon brushes on the magpoints and carbon brusnes on the mag-neto. As there is no leakage between the oil and petrol tanks, and there is no fault in the carburetter, I should be glad if you would give me the reason for the presence of the large quantity of petrol present in the crank case.—J.L.F.F.

he trouble can, of course, be traced to se need of attention to the magneto. he various attempts to start the machine turally drew the petrol mixture into e engine, and condensation would count for its presence in the crank amber.

The Low Generator. Can you help me out of my

difficulty? I bought a sidecar outfit, and before starting out I tried everything. The lamps, which are fed from a Low generator, gave a splendid light, so I sentured forth. When lighting up ime came I turned the water on, but to no light; so I filled up again, got 1 good light, but on starting up there was a sudden flare, and then darkiess. I could not get the generator to work when moving. I believe the water difficulty? I bought a sidecar iess. I could not get the generator to orrk when moving. I believe the water plashed over through the gas holes not the carbide, and then got forced ato the tubes and burners. Can you elp me to make the thing right? The urners were quite clear, but there ppears to be nothing to prevent the cater splashing over into the carbide, aless it is the pressure of gas. Should the water chamber only be belf full? he water chamber only be half full?

s generator, being of somewhat un-al design, is rather more complicated a the conventional patterns, and you and the conventional patterns, and you all make yourself acquainted with the ty valve is stopped, and too high a sure is generated. As you are aware, the huware will be blown. his is so, the burners will be blown by the pressure of the gas itself. The by the pressure of the gas itself. The er is kept away from the carbide a certain pressure is attained by force of the gas acting against it. s possible to fill the water container e full, and unless there is some con-tional defect in the generator this not cause any trouble. We should ammend that you totally dismantle the generator, and carefully clean and dry each part. You should also clean and dry all lengths of tubing connecting. the generator to the lamps, and we also recommend the adoption of small gas bags in the connecting tubes.

Gear Ratio

Having a 31 h.p. motor cycle, fitted with a four-speed Jardine gear box, I wish to obtain a top genr box, I wish to dutain at con-genr ratio of 43 to 1, with the wheel sizes as shown: Engine sprocket, 19 teeth; genr box sprocket, 36 teeth; gear belt pulley, 8in.; wheel belt pulley, 20in. Is this cor-

where next purey, 20th. Is this correct, and would nineteen teeth on the engine sprocket be abnormally large, or normal practice?—W.G.P.

The adoption of the sprockets and pulleys you suggest will give a gear ratio of 4.74 to 1 on top, which should prove satisfactory for a 3½ h.p. motor cycle fitted with a sidecar. The ninetentooth engine sprocket will be quite in order.

Over Rich Mixture.

I have a 3½ h.p. Triumph, fitted with old pattern Bosch magneto, and an old type B. and B. carburetter. I have had the misfortune to get some very last two journeys, and have since spent considerable time in trying to trace the trouble, which was as follows: (1.) When I closed the throttle for the purpose of passing traffic or for cornering I had trouble to keep the engine going when I opened out again, and almost every time it choked up. I examined the induction system, but could find no trouble there, and I do not think it was caused by air leakage, for when it did begin to fire I got down to too rich a mixture. The engine was not over-oiled. (2) I examined the magneto, and found I got a spark at the contact breaker point which developed into a flame at high speed. but at the same time I got a good spark at the plug points. (3.) On the same machine I have fitted a Philipsame machine I have here a rimp-son pulley (direct from the makers), touring pattern. I have been about sixty miles since fitting it, but so far sixty miles since ntung it, but so tar the pulley has never altered, although with a passenger up, the engine has given out on hills. The makers advice is not to use controls, and so far I have followed their advice. I should

appreciate your help .- G. H.G. (1.) The carburetter is probably flooding, and we should recommend that you careand we should recommend that you carefully check the petrol level, which should be about 3-32in, below the top of the jet. (2.) The excessive sparking which you mention as being present at the contact breaker point should not occur, and is probably due to a fault in the condenser of the magneto. We should recommend that you have this should recommend that you have this examined, (3.) The pulley should automatically reduce the gear ratio in proportion to the load imposed on the engine. If the gear remains constant throughout, we should certainly suggest that you write to the manufacturers, who will no doubt give you the necessary information you require as to the correction of this fault.

Partial Seizure.

The engine of my 21 h.p. twostroke sometimes runs heavily, and after a few miles will pull up on any fairly steep hill. A

paraffin injection instantly puts things right again. This occurs at distances from 50 to 300 miles between injections. The machine is otherwise quite satisfactory. Petrol, 100-120 m.p.g.; T.T. oil, 250 m.p.q. What is the cause of the trouble —A.R.J.

As a cure of your trouble is instantly As a cure of your trouble is instantly effected by a paraffin injection, it is undoubtedly caused by a partial seizing up of the piston in the cylinder bore." For a scizure to be present, it is not at all necessary that the engine should be immovable. We should recommend that you try a different brand of oil, such as B.B., and also make sure that any oil ways in your engine are quite clear, and that the oil actually reaches the correct places. A slightly more generous supply of oil would be advantageous.

EXPERIENCES WANTED.

"A.G.B." (Wilton) .- Use of light sidecar on 23 h.p. Alldays Allon.

Honister Pass.

A Cockermouth reader writes saying that the Honister Pass on the Buttermere side is in a worse condition than usual. Tourists thinking of visiting this part of Lakeland will be wise to take the pass from the Keswick side via Borrowdale and Seatoller.

The Irish End-to-end.

The date of the leading Irish event the End-to-end trial—has not yet been definitely fixed, but at a recent meeting of the Ulster Centre of the Motor Cycle Union the date was provisionally fixed as July 16th. The previous date decided upon clashed with the Scottish trial.

Printer's Pie.

A correspondent sends us the following extract from a daily paper of March 25th.

"Junior clerk required, about 18, in a chartered sidecar, well upholstered and underslung.—Apply."

In our youth we have experienced the advantage of upholstering on occasion.

Metropolitan Police Activity.

Considerable activity is reported in the Battersea district. Trapping is being carried out intermittently on the following roads: Battersea Bridge Road, Albert Bridge Road, Chelsea Bridge Road, Queen's Road, Latchinex Hill, and the Avenue, Claphain Common. It behoves motorists, therefore, to drive carefully through this locality.

Cup Offered to Affiliated Clubs.

With a view to increasing the desire on the part of the North-western clubs to become affiliated with the A.C.U., Messrs. J. Blake and Co., the well-known motor dealers of Liverpool and Manchester, recently offered a fifty-guinea silver challenge cup to be competed for by amateur members of each of the following clubs: Liverpool M.C., Blackburn M.C., Warrington M.C., Manchester M.C., and Bolton and District M.C.

In offering this cup, Messrs. Blake have suggested to the A.C.U. the advisability of altering the open competition rules to allow any number of affiliated clubs to compete together, always provided that the clubs taking part form one of the territorial divisions arranged by the A.C.U.

Smashed Sidecar Lamps.

Will the owner of the Indian outfit, the sidecar lamps of which were smashed in an accident on the 26th ult., between Gloucester and Cheltenham, please communicate with Mr. J. Crossley, 11, Royal Crescent, Cheltenham, who wishes to replace them?

Sydney-Melbourne Record Broken.

We are informed that a Harley-Davidson and sidecar recently created a new record from Sydney to Melbourne, covering the distance of 566 miles in 20 hours 38 minutes at an average speed of 27 m.p.h.

The previous record was established in April, 1918, by Fred Berry (Harley-Davidson and sidecar), whose time over the same route was 22 hours 20 minutes

New Source of Alcohol.

Much attention has been given in recent years to the question of manufacturing alcohol within the Empire for use as motor spirit. In the current number of the Bulletin of the Imperial Institute the possibility of utilising the mowra flowers of India for the purpose is discussed. These flowers possess thick, juicy petals, rich in sugar. They are used by the natives as a foodstuff, and especially 'for the preparation by fermentation of an alcoholic liquor, called daru or mowra spirit. A large quantity

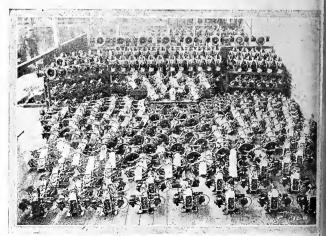

Special Features.

EASTER TRIALS.
A ROTARY VALVE ENGINE.

of the flowers would be available for the manufacture of alcohol, and would at pear to be an exceptionally cheap source of this material, as the yield is high compared with that from potatoes an other materials commonly used, about one of 95% alcohol being obtain able from one ton of dried flowers. I has been estimated that in the Hyder bad State alone there are already sufficient mowra trees for the production (700,000 gallons of proof spirit per annum in addition to that necessary for the localiquor requirements.

Third Aircraft Park, R.A.F.

It is proposed to hold a reunion of the above unit in Manchester on May 8th This Park was originally the 5th A.A.I. of the R.F.C. stationed at Puchviller and later at Candas. Those intereste are asked to communicate immediatel with Ex-Sgt. Major J. Marshall, 4 Chestnut Street, High Town, Mancheste who will supply all information when the arrangements are completed.

glas for the T.T. week advises us
the Flying Kilometre Race on the
menade will be held on the morning wing the senior event (Friday, June

ish Six Days Trial.

the past the Scottish Six Days Trial always been one of the most sportevents of the year, as the extremely ult nature of the course usually rsed renders it unnecessary to comte the event by the incorporation etty and irksome rules. This year

the Scottish Six Davs is to be run on even more lenient lines than hitherto, for not only is tyre changing to be allowed one day during the week, as already stated in these columns, but already stated in these columns, further, final condition is to be com-pletely ignored. One or two new rules, we believe, are to be incorporated, but they will be of a kind that will be appreciated by competitors rather than other-

The Motor Cycle Championship.

In connection with the motor cycle championship, which we mentioned recently, Mr. S. W. Phillpott has some interesting observations to make. He says: "Under the present arrangement, it is obviously going to be left either to the representative of a manufacturing firm, whose expenses are paid by his firm, or to a wealthy amateur, because it would be quite impossible for a man of moderate means to travel the length and breadth of the land in order to take part in the open competitions yet to be held. I

venture to suggest that a method of finding a winner-one which would be less expense and generally more satisfactory—would be to take the present A.C.U. districts of the United Kingdom, and let each club nominate its champions (two or three per club); these will take part in competitions organised by the A.C.U. within each district, and the best six or any other number will then take part in the final, which will give the champion. As an alternative, let the clubs in each county find their one or two best men per club. Let all these men in the counties compete, and find the county champion, runner up, and perhaps one reserve; then let these compete in the final. Thus we should get club, county, and British champion."

Head Lights.

That far too powerful head lights are in comparatively common use at the present comparatively common use at the present time, and that no satisfactory device to avoid dazzle has yet been discovered, were two of the conclusions of Mr. J. W. T. Walsh, M.A., M.Sc., A.M.I.E.E., who delivered a paper on the subject last week.

A.C.U. Finance.

It is gratifying to observe that the financial position of the Auto Cycle Union is now very sound. During the year just concluded the Auto Cycle Union's income was no less than £17,000. Those at the head of the Union confidently anticipate that for the ensuing year the income of the body will be well up to £20,000.

Libelling a Good Road.

The A.A. has issued a series of maps showing certain roads as being bad and to be avoided. A rather regrettable error is the marking of the route from Newark to Leicester. The distance to Six Hills is down as bad and to be avoided. Actually, this stretch is one of the finest in the kingdom, being straight, finely-metalled, and entirely free from pot-holes. From Six Hills to Leicester, however, the road may justly be described as worse than atrocious.

Institution of Automobile Engineers.

The tenth meeting of the session of the Institution of Automobile Engineers will be held on Wednesday, April 14th, at the Institution of Mechanical Engineers, Storey's Gate, St. James's Park, London, S.W.I., at 8 p.m., when Dr. W. H. Hatfield will read a paper entitled "The Most Suitable Steels for Auto-mobile Parts." Application for cards of invitation to the meeting should be made to the secretary, 28, Victoria Street, S.W.1.

AN IRISH EASTER TRIAL FOR THE DUNLOP TROPHY.

E open trial on Easter Monday under the auspices of the Dublin and District Motor Cycle Club did attract as large an entry as was sted, owing doubtless to the severity ie course and the fact that there is considerable difficulty in procuring my of new machines. Only seven-of the entrants presented thems at the starting point at Inchicore e, and most of them were members ie promoting club. The Dunlop y was offered for the event, and the

conditions were of the customary character, except that the markings at the secret checks will not be taken into account in the event of a tie between two or more riders. The starters were sent away in the following order:

t away in the following order:
P. H. Hurse (4/4, B.S.A.);
T. V. Murphy (2%, Douglas),
J. Nolan (4%, B.S.A.);
H. Mickellister (7.9 Indian sc.),
J. Brown (2% Douglas),
W. R. Clarke (7.9 Excelsior sc.),
H. Howlson (7.9 Excelsior sc.),
J. Healy (2%, Beardmore-Precision),
S. C. Smith (4 Norton sc.)

W. J. Burney (8 Enfield sc.).
G. Kilroy (4 Sunbeam sc.).
G. Kilroy (4 Sunbeam sc.).
A. A. Wayte (7-9 Harley-Davidson sc.).
C. W. Johnstone (7-9 Harley-Davidson sc.).
Maj. J. A. H. Waters (21 Enfield).
T. Copethorne (4 Triumph sc.).
Allen (4 Norton sc.).

The route embraced the crossing of the Co. Wicklow mountains from West to East via - Wicklow Gap, the military road from Drumgoff to Auglavanagh in both directions; the ascent of Ballymacrae Hill, and to Sally Gap from Round-wood, and also the Devil's Elbow at Glencullen.

MCC JARROTT CUP COMPETITION

London Lands End

Innovations in this Popular 314 Mile Trial: A North Devon Route via Lynton and Porlock in place of Dartmoor.

IN spite of unfavourable forecasts the weather was kindly disposed towards the hundred and sixty odd starters for the Motor Cycling Club's classic Easter event. Starting from Hounslow at one minute after midnight, the first competitor travelled in darkness through Maidenhead, Reading, Marlborough, and Devizes; the grey dawn breaking before Bridgwater (130 miles) was reached. Breakfast at the White Hart came as a welcome relief to the eye-weary riders, while the Bridgwater Motor Co. attended to the wants of the machines. The road to Minehead was so wet as to raise the gloomiest forebodings.

The 15 m.p.h. Non-stop Section.

Of course, the tit-bit of the run commenced at Porlock village, and extended for fifteen miles over the noted hill of that name, across Exmoor, and up Lynton Hill. The schedule speed for this difficult stretch was reduced to 15 m.p.h., and a non-stop run was demanded. For once in a way, Lynton Hill proved more difficult than Porlock, for the surface of the latter has wintered well, and is in better condition than we have known it. There was a crop of failures, of course, many due to rank bad driving. A number of sidecarists ascended minus passengers, but, generally, the solo riders performed well. If Porlock is long and severe, Lynton is steeper, and a great number of spectators gathered to see the competitors. Hugh Gibson (No. 1), astride a two-stroke Clyno, led the way, and, hugging the dry patch beside the wall, made a splendid ascent. A. J. Sproston (Lea-Francis) followed in equally good form. Garford (5 Zenith) just got up by vigorous humping on the saddle. Staunton (Triumph) did well, Gibson (4-5 Zenith) doing better still. Chidley (Brough) got into a rut, kept going well round the corner, but stopped higher up. That veteran, W. E. Brough, charged the 1 in 3 section on the inside of the corner, and got to the steepest section when he had to assist his engine by footing. "W. Cooper and Son," on Lea-Francis and Douglas machines respectively, reached the difficult corner together; pater was too solicitous for his son, and failed on the corner. The son was unlucky in running out of petrol near the top. McKeand (flat twin Harley) stopped with a sooted plug following the long descent of Countisbury; several others suffered the same experience-in fact, the thousand feet drop into Lynmouth had the effect of cooling the engines thoroughly, but, on the other hand, invited oiled-up plugs. Karslake (6-7 Ariel) stopped below the bend, but restarted and made a fine climb. Spikins and Edwards (7-9 Harleys) showed up

well. Longman (Ariel) was among the fastest, Sharratt (Triumph) excellent, and Robertson-Brown (Henderson) very good. Redvers Johnson (3½ Humber), though baulked, kept going splendidly, and Olssen (8 New Imperiat) and Clark (Blackburne) were excellent. Hilger (Rover) was baulked by a spectator, but went up well on the next ascent. Reed (Scott) stopped, Harrison (Calthorpe) was good, and Browning (Scott) good. Applebec and Colliver, on Indian Scouts, toyed with the 1 in 5 gradient, but Jones (Ariel) stopped with a broken chain. Then followed a long interval, during which traffic and ponies went up and down the hill. Boyer (Triumph), Pulham (Ariel), and Henry (Metro-Tyler) rounded the bend in good style, but Henry stopped near the summit.

The Spectators Applaud.

Enticknapp (Blackburne) was baulked by a cart on his first attempt, but received quite an ovation on his second successful attempt. Watson Bourne's gear jumped out of engagement. Porter (A.B.C.) made a splendid ascent. Squires (Triumph) followed in equally good style. Baxter (Radco) just got up with foot assistance. Pike (O.K. Union) is deserving of gratulation for a clean ascent, Keith Robinson (A.B.C.) mulled corner and had to assist with his though clearly he had ample pc Then after a hill, four solo riders an in a bunch. Pinder (Zenith) stoppe the stones, Armstrong (Blackburne) Osborne (B.S.A.) were good, whilst fourth, Spouse, stopped on the I Minton's Norton made a good ascent, his engine emitted a terrific cra The Nut, ridden by Barton, a showed up prominently, also Rey (Brough). Brittahn (Sunbeam) did and Newman, this time on a 3½ Sunbeam sidecar, made the gradient simple enough. Now the sidecars to arrive in numbers. Morgan (Hr Davidson) charged round the bend appeared to have the hill well in when his back wheel commenced to and he stopped. Quite the most pressive passenger ascent was mad Hr. Dale's 8 h.p. Royal Ruby, climbed easily and surely and yet silent. Apsey on a similar mount also good. Elee's G.P. Morgan maceasy climb. Choldcroft's A.J.S. s-quired assistance simply on account

Some idea of the gradient of Porlock is conveyed by the above illustration, which depict the second bend of this famous hill.

.C. Jarrott Cup Competition .-

el slip, which troubled many com-Dan Bradbury got quite te. I he yelled to his passenger to out, while he bumped vigorously on saddle of his Norton sidecar outfit; got up splendidly. Three Morgan ers hereabouts went up in fine form left quite an excellent impression ng the spectators, judging by their arks. A terrific crackle heralded the oach of Masters on a Harley-David-He charged the inside of the bend reat speed, but stopped higher up by because has back wheel was spin-sor fast it had no time to grip the y surface! Richardson (James) ded the corner well, but was baulked the top and had to be assisted. Clark (Douglas) had to shed his enger because he could not engage lowest gear. For this reason he ed at Lynton. Hoult and Ross were leaders of the fleet of Matchless ar drivers, who made an excellent

mportance of Weight Distribution. ilroyd on an 8 h.p. Blackburne,

her with his passenger, sat normally her with his passenger, sat normally aghout their climb, which would sugthat the weight distribution is ideally iged for hill work. Hardee and Ellis chless) lived up to the reputation of Matchless fleet by climbing 'steadily well. Fell Smith (Harley) ran on the stones to avoid Sanford (Rover) stopped. Boxer's Matchless was so on the bend that the sidecar lifted to the brief women't the cident to the state of the state one brief moment the sidecar reed in the air, the bicycle still going, the outfit righted itself and went ell. Allen's Matchless did the same , but the driver had to turn into the to right the machine, and thereby the forks, so that he retired. Atkins ily was baulked, but made no mistake time up. Mackenzie's Humber du p well, Walker (B.S.A.) stopped, son (Rex), with his passenger on the r to prevent wheel slip, did well,

D. H. Noble (Reading Standard sidecar) and R. S. Aitken (Indian sidecar) negotiating Lynton.

Note the atrocious road surface.

and Charlie Collier (Matchless) was good and Charine Coller (Matchiess) was good at first, though he had difficulty in keeping his front wheel straight. Near the top he came to a standstill. Wright (Indian) stopped and shed his passenger; Goodwin (Castle Three) grazed the wall, and had to shed his passenger on the steep stretch. Dr. Letchworth's passenger gave an exhibition of acrobatics. but his Harley again stopped, simply due to clutch slip. G. S. Wright (Indian) rounded the bend in good style, but was baulked near the top by stranded com-petitors, and had to be assisted. To

Longman must be given credit for the best climb by a Harley-Davidson driver. Then followed the light cars, whose performances are referred to in our parent journal The Autocar.

On to the Luncheon Stop.

With really difficult hills left behind. competitors scurried on to Barnstaple, Holsworthy, and to the luncheon stop at Launceston. Clutch trouble, due to at Launceston. Clutch trouble, due to their severe gruelling on the Devonshirc hills, was not infrequent, and others were short of petrol. Beyond Bideford the road surface as far as Holsworthy was so villainous as to call down much invective on the heads of the organisers, but the lunch stop at Launceston put fresh heart into the tired competitors. Here W. Cooper's Lea-Francis was wheeled away to a garage, and did not appear later. Leaving Launceston, a few miles of bad road were encountered, but the perfect surfaces of the Bodmin Moor roads were a delight to the heart and a source of much time saving. Good roads continued to Truro, where the old Land's End route was joined. With the excep-tion of the final ten miles and the rough going through the mining district, the final stretch to the extreme west of Cornwall was covered without untoward incident. As usual there was a hearty welcome for the survivors at the Land's End Hotel, which was the scene of many a Hotel, which was the scene of many a reunion of old friends. As might be expected, an inspection of competing machines revealed many interesting "gadgets," both in the way of lighting and personal equipment. One rider even went so far as to attach a tin of cigarettes and an electric lighter to the top tube of his machine. The survivors signed the checking sheet in the following order :

onsiderable public interest in the climb of Porlock was shown on the first bend, where the gradient is about 1 in 4.

From the Midlands to the Welsh Coast.

The Birmingham M.C.C. Sangster Cup Trial. Bwlch-y-Groes Included.

OUT of forty-eight entries for the Birmingham-Barmouth trip there were but three non-starters. Those who but three non-starters. Those who went through had a wet journey, for incessant rain fell until the lunch stop, where several competitors gave up absolutely wet through. Delay was caused by the police, who were working a trap, and demanding licences near Welshpool.

Performances on Bwlch-y-Groes.

The approach to the Bwlch-y-Groes ascent was over heavy roads. Ten riders failed on the corner. The best performances here were made by Egginton (31 Sunbeam) and Denley (Morgan). ton (52 Sunbeam) and Denley (Morgan). The star solo climbs were accomplished by Heath (22 A.J.S.), Kuhn (22 Levis). Dalby (4 Triumph), and Duke (4 Triumph), while Solly (42 B.S.A.), Deuley (53 Sunbeam). Woodcock (33 Ariel), and Rollason (32 Ariel) also did well. Watson (02 Ariei) also du wen. Watson (4 Norton sc.) made the best performance among the single-cylinder passenger machines, but Newcy (6 Ariel sc.) and Davies (6 A.J.S. sc.) also de-

THE LONDON-LAND'S END TRIAL. One of the competitors in difficulties on Porlock

serve mention. Ward (6 Excelsion sc.) was baulked near the top of the hill, otherwise he made a good ascent.

The hill was marked off in sections, a fact which was appreciated by the competitors, and the plug of Kibble's Triumph gave out on the seventh section. Several men ran up the bill alongside their machines, and one was so exhausted after reaching the top that he put his head into a stream to cool it. A curious head into a stream to cool it. incident befell Peters (4 Triumph). His belt came off, and he ran backwards; this replaced the belt, and he continued the ascent.

Bad Road Surfaces.

Mrs. Egginton gave useful warning at the top of the hill respecting the dangerous state of the roads on the descent, which were worse than those met met with in last year's Six Days Trials. Near Dolgelly and Barmouth several came off owing to the grease, which was very treacherous. Thirty-two competitors checked in at the finish.

2,000 Spectators at a Northern Hill-climb.

A Successful Meet of the Westmorland M.C.C. at Orton Scar.

FINE weather drew a crowd of about 2,000 spectators on the occasion of the open hill climb held by the Westmorland Motor Cycle Club on Orton Scar on Easter Monday. Over a hundred and fifty competitors entered the various classes, among whom was a boy of fifteen, who gained a bronze medal in the light twin class, and a lady, who made a fine climb on a Norton in the sidecar class. General disappointment was felt when it was found that no scooters would face the climb, although this type of machine was present. The hill was about two-thirds of a mile long, varying in gradient from 1 in 8 to 1 in 30. The fastest climb of the day was made by A. J. Moffat, riding a 4 h.p. Norton.

The results were as follow:

CLASS 2 .- Not exceeding 275 c.c. on time. B. Houlding (2½ Diamond).
 F. Porter (2 Levis).

CLASS 3.-Not exceeding 350 c.c. on time. B. Caldwell (2% A.J.S.).
 G. S. Boston (2% A.J.S.).

CLASS 4 .- Not exceeding 500 c.c. on time.

 G. Jefferys (3½ Norton).
 B. Coldwell (2¼ A.J.S.). CLASS 5.-Singles not exceeding 350 c.c. on formula

1. G. S. Boston (2¾ A.J.S.). 2. B. Houlding (2¾ Diamond).

CLASS 6.—Twins not exceeding 350 c.c. on formula.

1. S. A. Marks (254 Douglas).

2. N. Houlding (254 Douglas).

CLASS 7.—Singles 351 c.c. to 500 c.c. on formula.

1. G. Jefferys (5½ Norton).

2. E. C. Peacock (5½ Norton).

CLASS 8 .- Twins 351 c.c. to 500 c.c. on formula. L. S. Parker (3 A.B.C.).
 J. Baker (3 A.B.C.).

CLASS 9 .- Not exceeding 750 c.c. on time A. J. Moffat (4 Norton).
 R. O. Hodgson (4 Norton).

CLASS 10 .- Any capacity.

 A. J. Moffat (4 Norton).
 B. Houlding (7-9 Harley-Davidson). CLASS 11.-Single 501 c.c. to 750 c.c. on formula.

1. A. J. Moffat (4 Norton). 2. R. O. Hodgson (4 Norton).

CLASS 12.—501 c.c. to 750 c.c. ou formula.

1. J. Baker (354 Scott).

2. B. Hill (354 Scott).

CLASS 13.-Twins 750 c.c. and upwards on formula.

1. H. V. Prescott '7-9 Harley-Davidson'.

2. R. Harrison (7-9 Indian).

CLASS 15.—Sidecars on formula 1. B. Jeffreys (4 Norton), 2. S. A. Marks (2% Douglas).

The Next Big Midland Trial.

Birmingham M.C.C.'s Open Trial for Victory and Midland Cups.

THE second of the four open events allotted to the Birmingham clubs will be run on the 24th inst. by the Birmingham M.C.C., and everything is being done to make it a success.

In addition to a gold medal to the competitor in each class who has the greatest number of marks to his credit and silver medals to all who do not lose more than 10% of the marks scored by the gold medal winners, there are a large number of special awards, including the undermentioned:

Victory cup for greatest number of marks.

Midland cup for best performance in the passenger class.

Duke cup for best performance on a solo machine above 275 c.c.

Ross prize for best performance on a solo machine under 275 c.c. Special gold medal for best performance on a single-geared machine.

Special gold medal for best performance

by private owner. Team prizes (three prizes). The classes include (A) lightweights up

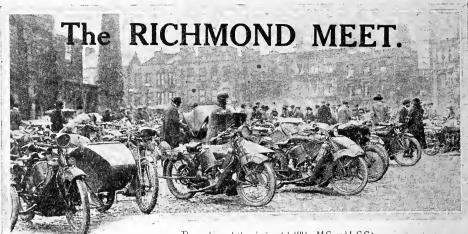

to 275 c.c., (B) solo machines over 275 c.c., (C) passenger machines up to 750 c.c., and (D) over 750 c.c. The entry fees (which should be sent to Mr. W. H. Egginton, 76, Earlsbury Gardens, Birchfield, Birmingham, before Friday, the 16th) are 15s. for members who are private owners; 21s. for trade members; non-members, teams, 21s.

Although the start is not until 9 a.m. from the George-in-the-Tree Hotel, Berks-

well, competitors will be required to obtain their numbers and to weigh at Hampton - in - Arden passenger railway station between 6.50 and 8 a.m.

Each competitor will be credited with 100 marks, and penalties will be imposed as follows: 5 marks for falling to start the engine within fifteen seconds on receiving the word "go," I mark for each minute early (allowance of three minutes), 1 mark for every minute late (allowance one minute), 5 marks for walking into or waiting outside checks, 5 marks for stops in non-stop sections other than on observed hills, which will have different values in this respect.

The route is not yet available for publication, but it will be made known at a later date.

The machines of the winning club (Ilkley M.C. and L.C.C.)

Gathering of North of England Motor Cyclists. Good Attendance despite Bad Weather.

FROM time immemorial (so far as motor cycle history is concerned) the Market Flace in the old town of Richmond in Swaledale, North Yorkshire, has been filled on Good Friday by the clubmen of the North-eastern counties.

This year great efforts were made to ensure the success of the event, and, had the weather also done its best, the gathering should have been a record.

Under the circumstances the attendance, considering the mileages covered, was indeed evidence of the keenness of these northern riders, who apparently are not to be deterred by bleak moorland

mists, raw and piercing winds, and a drizzle intermittently.

Two members of The Motor Cycle staff attended the Meet, and Coventry was left behind on Thursday morning. On refilling in Wetherby, it was said that Richmond would be already full, so a stop was made at Boroughbridge, the "Three Greyhounds" providing all the homeliness and comfort man could desire. Rain fell unceasingly all night, but a fast run along Leeming Lane was made after: breakfast. Richmond was reached at 11 a.m The skies were dull, mists hung

low on the hills, and only the castle stood ont boldly, black and grim against the prevailing greyness. The Market Place was occupied solely by Lt.-Com. Pierce (A.C.U.) and the R.A.C. guides. Anon, however, the hardy ones com-

Anon, however, the hardy ones commenced to arrive, singly at first, and then in batches.

The York, Hull, and Darlington clubs came in well together. A buzzing of Scotts marked the arrival of the Ilkley club, and a contingent of N.U.T.'s dashed up from Newcastle. By mid-day the curiously paved square of river-washed stones was alive with motor cyclists, who circulated amongst the orderly rows of machines, disgussing the points of each, and noting with interest the many new machines and the "kinks" and "gadgets" to be seen.

The Counting of the Peoples.

At 12.45 a.m. the committee, consisting of Messrs. T. W. Loughborough (A.C.U.), J. Norman Longfield (Ilkley), A. K. Procter (York), J. W. Tranmer (Scenborough), T. H. Straker (Hull), W. Emsworth (Ripon), A. W. Sellars (Ilkley), and D. H. Smith (The Motor Cycle) took the count of the competing clubs and examined the assembled machines in order to select the winners.

Casually glancing over the assembly, we saw nothing amazingly new. One A.B.C., a Wooler, two Blackburnes, and several N.U.T.'s were there, while the Autoglider, Blériot Whippet cycle car, and Black Prince runabout were all represented. Triumpbs, Scotts, A.J.S.'s, Sunbeams, P. and M.'s, B.S.A.'s, Donglas, and Morgans were prominent.

A meeting was held during the afternoon in the Market Hall, and the Mayor of Richmond (Mr. F. J. Hodgson) officially welcomed the motor cyclists to the town. Mr. T. W. Loughborough suitably responded, and spoke of the proposed new taxation scheme now before the Parliamentary Advisory Committee.

Machines of the various clubs arranged in line awaiting the count

The Richmond Meet .-

Taxation of Motor Cycles.

Speaking for 63,000 motor cyclists, the A.C.U. had urged that motor cycles should be taxed according to use, and this could only be done through the fuel tax. It was proposed that all crude petroleum should be taxed, but objec-tions were raised to this, and it was now almost certain that the new tax would be 30s, on solo motor cycles under 200 lb. weight, £3 on solo motor cycles over 200 lb, weight, with £1 additional when

The Mayor next presented the prizes, thus bringing the meeting to a close.

Roadside Repairs.

In order to get home before dark. the great majority had departed by four o'clock, and our representatives were amongst the last to leave. Scurrying down the Great North Road, with an all-night run to Coventry ahead, much anusement was derived from the fact that upwards of twenty-five motor cyclists effecting roadside adjustments were overhauled in the first twenty miles. A stop was made at Boroughbridge to stop was made at boroughbridge to fortify the inner man, and Doucaster was reached as darkness closed in. With lamps alight and our Scott running "like steam," we hastened southward. "Ye Old Bell' at Barnby Moor, with the gleaning and inviting windows of the closer was the state of the stat old Dickensian hostelries, was a sore old Dickensian hosteries, was a sore temptation, but, speeding on, Leicester was passed at 11.45, and in a further two hours the "copy" in the printers' hands, and the Richmond Meet of 1920

became merely a recollection.

It is a recollection, however, of keen motor cyclists, who, for the sake of their clubs, turned out despite the inclement weather and heavy roads. crement weather and heavy roads, achieved their purpose, and "got there."

The Awards.

(1.) Silver cup and medals presented by the A.C.U. (2.) Bronze medals for the club with greatest percentage of members present, taking mileage into account.

A general view of Richmond Market Place. Hundreds of spectators watched the motor cyclists arrive.

Ilkley M.C. and L.C.C.
 Hull M.C.C.

Silver wrist watch (presented by The Motor Cycle) for the lady with the best kept machine.—Miss E. Dent (23/4 h.p. Douglas, 1915).

Prize (presented by the C. and M.C.M. and T.U.) for the lady driving the greatest distance to the meet.—Miss S.

F. Wilson (2½ Levis); 59 miles.

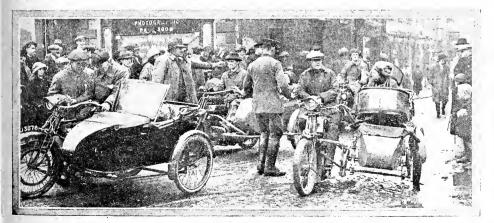

Prize of £2 for the owner of the best kept machine.—C. H. Zissler, Darlington (1917 B.S.A.).

Silver mounted brushes (presented by The Motor Cycle) for the most novelidea. -W. H. Dodds, Newcastle (3⅓ Sunbeam).

Motor cyclists being directed by the marshal on arrival in the Market Place

Brooklands Meeting Postponed until Saturday.

Bad Weather Causes Abandonment of First Post-war B.M.C.R.C. Meeting.

The scenc at Brooklands last Monday at the abandoned B.M.C.R.C. meeting

R AIN caused the postponement of the B.M.C.R.C. race meeting on Easter Monday. It had been a pouring wet morning, and when we arrived at the track, there were a queue of cars and motor bicycles nearly half a mile long outside the entrance. No one was allowed in till the officials had decided what course to adopt, and members were much annoyed not to be allowed to enter the pecincts to which they had a perfect right. The very moment that the decision to postpone the meeting till Saturday next was announced and to admit everyone on to the track free forthwith, the rain ceased, and it was fine for the rest of the afternoon. Such a crowd has never been seen before at a B.M.C.R.C. meeting, and that there was to be no racing caused much disappointment.

There were numerous interesting machines on the track, but, amid the huge concourse of spectators and spectators' mounts, it was hard to find them. E. B. Ware had a sporting single-seater racing Morgan, the radiator of which was a Grand Prix-pattern cut in half, reduced in size, and the two halves joined together. W. D. Hawkes was also driving a racing Morgan fitted with an eight valve M.A.G. engine of 1,100 c.c. (82 mm.×104 mm.), while among the Matchless machines was Major Jack Woodhouse's eight valve M.A.G. motor bicycle, which later in the afternoon ran a match with Capt. M. Campbell's Dietrich, the latest of the "Blue Bird" series. Both car and motor bicycle started together at a speed of approximately thirty miles an hour, the timekeeper, Mr. A. V. Ebblewhite,

riding alongside them in a fast car driven by E. H. Lees.

At the given moment the timekeeper lowered the flag and the car at once shot away, and unfortunately the Matchless, which is said to have lapped at 102 m.p.h., dropped behind, and thereafter could make no headway. The times were:

1, M. Campbell, four-cylinder Lorraine-Dietrich car (155×200 mm.), 2m. 5 s.,

78.90 m.p.h. 2, J. W. Woodhouse, two-cylinder Matchless (82×94 mm), 2m, 143s., 73.01

It is to be hoped that the weather will be more propitious next Saturday, in which case the meeting should be an excellent one.

The start of the racing will take place

at 2 p.m. sharp.

A SCOTTISH TRIAL RE-RUN.

THERE were thirty-two starters in the Glasgow Western Trial for the Stevens cup, which was held in conjunction with the re-running of the Palmer Trophy Trial. It will be remembered that no decision was reached on the former occasion, and only fifteen competitors succeeded in completing the course of the second trial. Despite good weather the roads were greasy, and the surface, combined with the gradient of

Mouse Lane—the first observed hill—was sufficient to cause twenty-seven failures. G. Mackenzie (3½ N.U.T.), A. Bird (2¾ Verus), G. Grinton (7-9 Harley-Davidson), and R. Macrae (7-9 Harley-Davidson) made clean ascents, but had little in hand. Tull Hill and water-splashes stopped several of the survivors, including Mackenzie and Bird. The big Harleys had an opportunity of showing their speed capabilities on the fast hill-

climb, but J. Walker's 3½ h.p. Norton seemed to be as fast as anything.

Until a final decision is reached it

Until a final decision is reached it would appear that the prize lies between Macrae and Grinton. The start was marred by the disappearance of two new 6 h.p. A.J.S. sidecar outfits from their garage. In case of recognition their registration numbers are GQ 759 and DA 3304, and the engine numbers 12087 and 12086.

Brooklands Meeting Postponed until Saturday.

Bad Weather Causes Abandonment of First Post-war B.M.C.R.C. Meeting.

The scene at Brooklands last Monday at the abandoned B.M.C.R.C. meeting

RAIN caused the postponement of the B.M.C.R.C. race meeting on Easter Monday. It had been a pouring wet morning, and when we arrived at the track, there were a queue of cars and motor bicycles nearly half a mile long outside the entrance. No one was allowed in till the officials had decided what course to adopt, and members were much annoyed not to be allowed to enter the pecincs to which they had a perfect right. The very moment that the decision to postpone the meeting till Saturday next was announced and to admit everyone on to the track free forthwith, the rain ceased, and it was fine for the rest of the afternoon. Such a crowd has never been seen before at a B.M.C.R.C. meeting, and that there was to be no racing caused much disappointment.

There were numerous interesting machines on the track, but, amid the huge concourse of spectators and apectators' mounts, it was hard to find them. E. B. Ware had a sporting single-seater racing Morgan, the radiator of which was a Grand Prix-pattern cut in half, reduced in size, and the two halves joined together. W. D. Hawkes was also diviving a racing Morgan fitted with an eight valve M.A.G. engine of 1,100 c.c. (82 mm.x104 mm.), while among the Matchless machines was Major Jack Woodhouse's eight valve M.A.G. motor bicycle, which later in the afternoon ran a match with Capt. M. Campbell's Dietrich, the latest of the "Blue Bird" series. Both car and motor bicycle started together at a speed of approximately thirty miles an hour, the timekeeper, Mr. A. V. Ebblewhite.

riding alongside them in a fast car driven by E. H. Lees.

At the given moment the timekeeper lowered the flag and the car at once shot away, and unfortunately the Matchless, which is said to have lapped at 102 m.p.h., dropped behind, and thereafter could make no headway. The times were:

1, M. Campbell, four-cylinder Lorraine-Dietrich car (155×200 mm.), 2m. 5s.,

78.90 m.p.h. 2, J. W. Woodhouse, two-cylinder Matchless (82×94 mm), 2m. 14§s., 73.01 m.p.h.

It is to be hoped that the weather will be more, propitious next Saturday, in which case the meeting should be an excellent one. -The start of the racing will take place

at 2 p.m. sharp.

A SCOTTISH TRIAL RE-RUN.

THERE were thirty-two starters in the Glasgow Western Trial for the Stevens cup, which was held in conjunction with the re-running of the Palmer Trophy Trial. It will be remembered that no decision was reached on the former occasion, and only fifteen competitors succeeded in completing the course of the second trial. Despite good weather the roads were greasy, and the surface, combined with the gradient of

Mouse Lane—the first observed hill—was sufficient to cause twenty-seven failures. G. Mackenzie (3½ N.U.T.), A. Bird (2§ Verus), G. Grinton (7-9 Harley-Davidson), and R. Macrae (7-9 Harley-Davidson) made clean ascents, but had little in hand. Tull Hill and water-splashes stopped several of the survivors, including Mackenzie and Bird. The big Harleys had an opportunity of showing their speed capabilities on the fast hill-

climb, but J. Walker's 3½ h.p. Norton

seemed to be as fast as anything.
Until a final decision is reached it would appear that the prize lies between Macrae and Grinton. The start was marred by the disappearance of two new 6 h.p. A.J.S. sidecar outfits from their garage. In case of recognition their registration numbers are GQ 759 and DA 3304, and the engine numbers 12087 and 12086.

MISCELLANEOUS ADVERTISEMENTS.

ADVERTISEMENTS in these columns First 12 words 3/-, and 3d. for every adonal word. Paragraphs of under 8 words charged double rate. Each paragraph is rged separately. Name and address must counted.
